

STYLEGARAGE

FACTORY PANEL

CONFIGURATION GUIDE

The Stylegarage Factory Panel is a fully configurable made-to-order partition system well suited to both contract and residential applications. Each panel is built to your specific needs and the demands of the space.

CONFIGURATION

T-Bar with high divider

Flat bar style with low kickplate

There are a number of ways each panel can be configured. The ratio of steel grid to kickplate is one such option – choose a low kickplate for an open appearance or a high divider to enclose space and add privacy.

Depending on the needs of the space, the panel can act as a passage for light or as a partition. Multiple panels can be aligned in a straight formation, or be angled to create a corner or enclosure.

The width of each panel is also configurable, offering the ability to neatly divide any area into an even number of sections.

FRAMING STYLE

The framing grid area can be left open or filled with glass. This grid can be manufactured in a number of styles – including an industrial-styled “T-bar” and a more streamlined, design-forward flat bar style.

The size of the grid is also customizable, from a larger, even square pattern to slimmer rectangular forms.

MATERIALS & FINISHES

A number of different finish options are available including industrial hot-rolled steel, sleek, streamlined stainless steel and a wide range of powder-coated finishes that ensure a uniform appearance.

Available glass options include standard clear glass, industrial wireglass and tempered glass in varying thicknesses.

Additionally, soundproofing materials are available if privacy is a concern.

and clear glass**

**Hot-rolled steel
and wireglass**

INSTALLATION OPTIONS

Depending on the space and the functional needs of the panel, different methods of installing and affixing the panels are available.

Typically, our adjustable ceiling mount system will be the ideal choice. Sturdy uprights affix to mounting points on the ceiling, and leveller feet underneath ensure that each panel is level regardless of floor.

Another option is to mount your Factory Panel on a sliding door mount, allowing the panel to act as a divider that can open or close when slid along a track mounted to the ceiling. Full drywall integration is also available.

DOORS

We've designed a few different styles of door that work well with our factory panel system. Generally, the demands of the space and installation requirements dictate what style door is best suited.

For more information about our door options, a specialized consultation is recommended. Please contact us for more details and we'll get you set up!

QUESTIONS?

The Factory Panel is our flagship made-to-order partition system, and there's a world of configuration options available beyond what's covered here in this brief overview. For more details, pricing, and a consultation that addresses your specific needs please contact our team directly.
