Backend-focused Developer (m/f/d)

We are looking for you - take off with us!

You may not have heard of us yet. But just imagine, we really do exist.

Finanzchef24 is a pioneering InsurTech company in Germany. Our vision is to fill business insurance with life, making it transparent, comparable, and completely digital. Since 2012, more than 40 colleagues in beautiful Munich are working passionately to bring that vision to life.

And we are successful with it!

With more than 50k active customers we provide the best products around business insurance. Dealing with virtual products, we can quickly iterate and innovate, to unlock their full potential for our customers. We live by our values – **#kicktraditions**, **#keepitsimple**, **#havefun** and **#makeithappen** – to provide easy, fast, and individual solutions, making insurance accessible to all businesses.

So, finished with this corporate talk: we, the tech division, need your help!

Apply now!

What you should expect from your role:

- contribute to an ambitious initiative to enhance our backend infrastructure, while improving the system architecture and performance through higher modularisation and reusability

- build new features for our products, while also feeling responsible for maintenance and taking ownership of the existing code: either have direct impact on the customer journey by improving our business insurance advisory application or go deep and improve on our business logic to determine quotes and manage our product data

- be involved and show interest in all team decisions, including our technology stack and ways of working

- share your knowledge with the tech team while also learning from other team members. You can do this both in dedicated environments – like our internal tech talks or our docs – as well as, of course, in your day-to-day work

- ideally do necessary changes in our React and Next.js-based frontend application to avoid dependencies to other team members

What we expect from you:

- ability to work independently and as part of a team, with excellent communication and collaboration skills - being emphatic is what sets us apart

- strong problem-solving skills and a proactive mindset to identify and address both technical and business logic related challenges

- enjoying and feeling confident working with Node.js and TypeScript

- sharing our values when it comes to code quality – validating through tests is part of it

- product-oriented, user-centered thinking and the drive to build something great

- good understanding of APIs – ideally GraphQL

- a growth mindset and a willingness to take on new challenges, contribute ideas, and continuously improve both individually and as part of a team

- ideally basic knowledge of Kubernetes and AWS, as we rely on both for managing our deployments

Our benefits:

- caring, funny, emphatic colleagues, in an environment where everyone treats each other on equal terms

- flexible working hours and location of your choice, remote (within Germany), hybrid or at our Munich office – up to you. We also offer 30 days of vacation and a workcation benefit to allow you to work for up to four weeks in any of the countries within the EU

- regional public transport ticket (Deutschlandticket)

- conference & training budget – we love to attend conferences as a team, lately visiting a conference in Amsterdam together

- an obvious one: high-end hardware of your choice (we prefer MacBook Pros)

- gym membership and the usual perks that will not make you decide for or against us, but that we still pay attention to, like free drinks, fresh fruits and numerous company & team events

#makeithappen

And upload your application documents in our application form. If you have any questions feel free to contact Veronika by calling 089 716772-791.

We look forward to getting to know you! You can find out more about us and our work on our about us **and** jobs **webpages.**
