Burnaby Refinery CAP Meeting

Table 1: Summary of Project Status, June 14, 2011

Map No	PROJECT	AREA	CONSULTANT	STATUS
1	Treatment of MTBE in groundwater	2	SLR (Seacor)	No change. (Due to low MTBE concentrations (4 mg/L), treatment to switch from carbon filtration to aeration.)
2	Perimeter Monitoring	1 & 2	URS	Chevron well monitoring program involves semi-annual monitoring. Report of 2010 events provided to BC Environment. 2011 spring monitoring complete.
3	Warehouse	1	URS	No change. (Monitoring, no apparent offsite contamination.)
4	Gardner's Way	1	URS	No change. (Monitoring, no apparent offsite contamination.)
5	Investigation by railroad crossing and Area 3 (G1-4, and Area 3)	1	URS	Area 3 air injection system started in fall 2010.
6	Area 1 Foreshore Sediment Remediation	1	URS	No change. Remedial excavation report provided Nov 2009, and follow-up risk screening report provided Dec 2009. Sheen monitoring program in place.
7	Flare	2	URS	Adding wells from the EIB Seep to just east of the Flare as an extension of the EIB extraction system.
8	EIB Seep	2	URS	EIB remedial system includes 10 extraction wells in full operation. Extracting ~50L/day of liquid hydrocarbons (as if April 7, 2011). Interception trench installed at railroad. Oleophilic clay boundary at beach. Ministry oversight.
9	Ponds	2	URS	Adding wells from the EIB Seep to just west of the Ponds as an extension of the EIB extraction system. (Pump and treat, and air injection ongoing since 2006 and 2008 respectively)
