

Square Ceiling Diffusers

The Polyaire PSB Swirl Diffuser has fixed spiral blades that create rotational as well as axial, tangential and radial air movement. This means that it produces a strong horizontal swirl, obtaining high inductivity, to allow the introduced flow to rapidly mix with the ambient air to reduce temperature and also perceived drafts or hot/cold spots.

Velocity is reduced while still maintaining volume and reduced noise and this product is ideally suited to handling larger volumes. The PSB maintains high quality air diffusion throughout the space with minimal temperature variation. The swirl effects ensure good mixing of supply and ambient air.

The PSB is also suitable for return air application due to low pressure drop across the grille. The standard PSB is made of cold rolled galvanized plate steel powder coated white (RAL9010). Other finishes are available to suit the interior and architectural design requirements. The face plate is 595mm Square and suitable for surface mounting in the ceiling or alternatively as a lay-in for T-Bar ceiling installations.

Sizes Available/Dimensions			
ITEM #	SIZE (Neck / Face)	Q	L
247094	PSB Q 595/254	595	254
247095	PSB Q 595/336	595	336
247096	PSB Q 595/440	595	440
247097	PSB Q 595/530	595	530

4. Installations

Installation flat to the ceiling is applicable to all types.
Min. 2.6m from the bottom edge of the installation surface to the floor.

5. Symbol Definitions

$V(\text{m}^3/\text{h})$	Blast volume of every air port
$A, B (\text{m})$	Distance between difusers
$V_{hl} (\text{m/s})$	Average air velocity between the two air ports at Height H_i
$H_i(\text{m})$	Distance from the ceiling to the activity area
$\Delta PT (\text{Pa})$	Total pressure loss (air blowing)
$H(\text{m})$	Installation height
$L_{WA} (\text{dB}<A>)$	A sound power level noise

6. Quick Selection

SPECS	AIR VOLUME (m^3/h)	Pressure Loss (Pa)	Noise (dB)
