

Screen	Description	What is displays
A	Display test	This is a default display, that tests that the blue button is working
B	Emergency reset amount	This shows any amount that will be repaid to the emergency credit by the next top up
C	Time	This shows the time the meter thinks it is (in GMT)
D	Date	This shows the date
E	Total credit accepted	This shows how much credit has been paid on the meter since it was installed and reset. When a ppm is reset it will wipe off all data apart from the debt.
F	Total weekly charges	This shows the weekly standing charge. This will also include any weekly repayment rate
G	Total energy consumed	This is the total electricity used since the meter was first installed
H	Day unit reading	This shows the day register meter reading
I	Day time pence per unit	This shows the day rate tariff
J	Night unit rate	This shows the night register meter reading (if applicable)
K	Night time pence per unit	This shows the night rate tariff (if applicable)
R	Emergency credit	This shows how much emergency credit is available on the meter (insert key)
S	Total debt outstanding	This shows how much debt remains on the meter (insert key)
T	Debt repayment rate	This is the fixed amount to be paid off in instalments
