

MULTIVISTA + PLANGRID

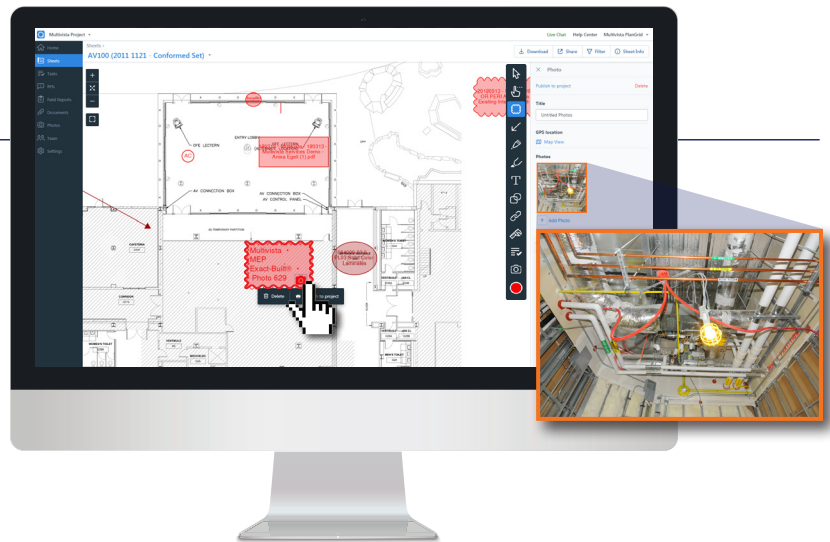

FOR ADVANCED FLOORPLAN MANAGEMENT

Multivista, the leading visual construction documentation platform, and PlanGrid, the highest-rated floor plan management platform, are now linked via a robust integration.

Update Floorplans with Inspection-Grade Photographs

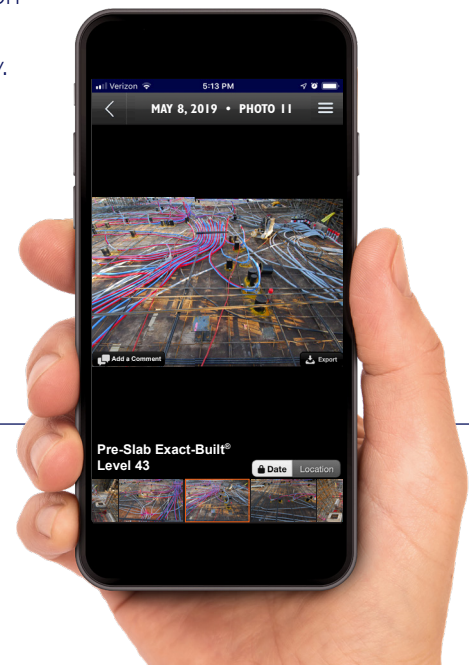

PlanGrid keeps all project team members up to date with the latest sets of plans. Now, construction and design teams can add as-built visual documentation by pushing photographs directly from the Multivista Platform to PlanGrid, where they can be added as annotations to floor plans for the entire team to access.

Connect to the Field, Right from the Office

Multivista's progression and Exact-Built® photographs hold the key to resolving critical issues rapidly. Now, these photographs can be delivered to field personnel in the places they're already looking, on the platform they're already using, for maximum accessibility.

Enhance Tasks, RFIs, and Field Reports

Enhance tasks, RFIs, and field reports in PlanGrid by attaching the project's visual documentation, captured regularly by Multivista photographers. Each image is time and location-indexed for clarity and context.
