JORC 2012 Mineral Resource Estimates for Jericho, Altia and Sandy Creek

Now working to expand 153kt Cu resource inventory

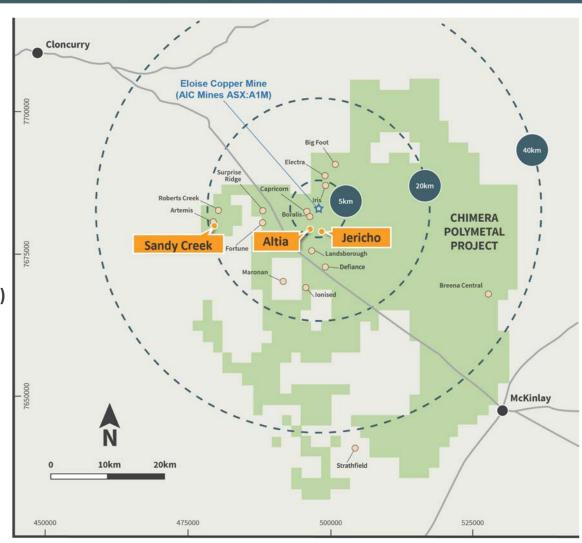

Plus a delineated pipeline of promising greenfields-to-advanced exploration

prospects

Chimera – perfectly located

- Well located in world-class Cloncurry mining district, Northwest Queensland
 - Chimera encapsulates a dominant footprint of 2,100km²
 - 3 JORC standard deposits within 20km radius: Jericho (Cu-Au-Ag); Sandy Creek (Cu-Au) and; Altia (Pb-Ag-Zn)
 - Chimera resource base of +17Mt has 153kt of contained Cu and 107koz Au with significant exploration upside
 - Chimera surrounds the Eloise Copper Mine, owned by AIC Mines (ASX: A1M)
- Obvious scope to significantly expand Jericho resource through infill and extensional drilling
- Tenement area remains relatively under explored despite local presence of numerous base metal deposits

NOW BUSILY WORKING TO EXPAND JERICHO DEPOSIT

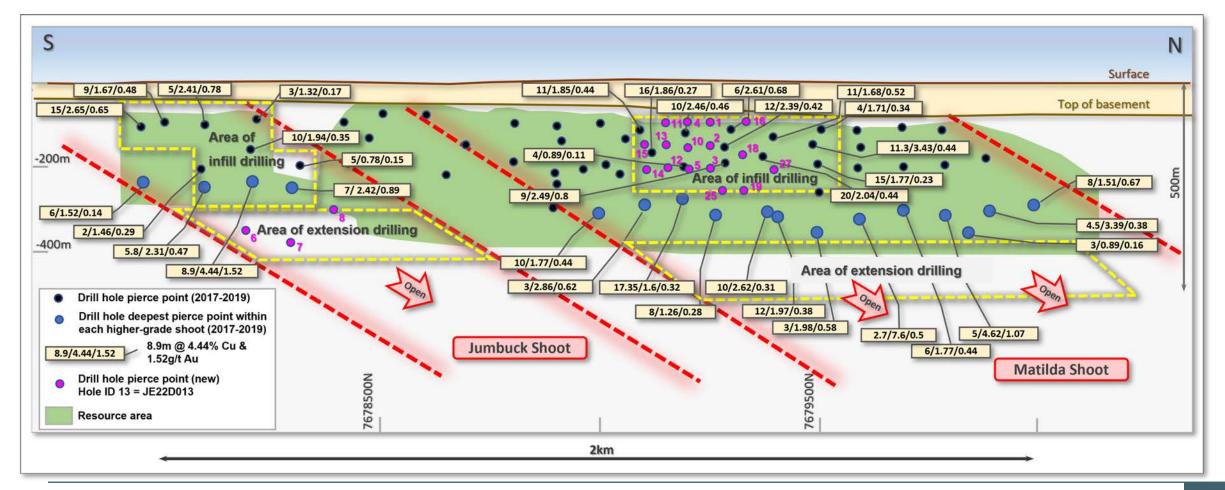

Chimera Flagship Deposit - Jericho

- Jericho Cu-Au deposit was discovered by Demetallica's team in 2017
- ► Located ~3km of the Eloise Copper Mine and concentrator
- ▶ Iron Sulphide Copper Gold (ISCG) mineralisation in parallel lodes J1 and J2
 - J1 and J2 are parallel and strike up to 3.7km (both lodes open along strike and at depth)
- **2022** objective: expand Jericho resource to 13-15Mt Cu (circa 45% 65% increase)
- 2 rigs are drilling into Jericho
 - ▶ RC drilling 100-130m per day shift 15 holes completed
 - Diamond rig coring ~30m per day and night shift in excellent ground conditions
 3 holes completed

Jericho – drilling on J1 Lode

- ▶ Higher grade at depth, with average grade at base of Matilda shoot = 2.21% Cu, 0.39g/t Au and for Jumbuck shoot = 2.85% Cu, 0.84g/t Au
- ▶ Resource extension and infill drilling underway with 2 rigs busily pursuing ~14,000m drill program

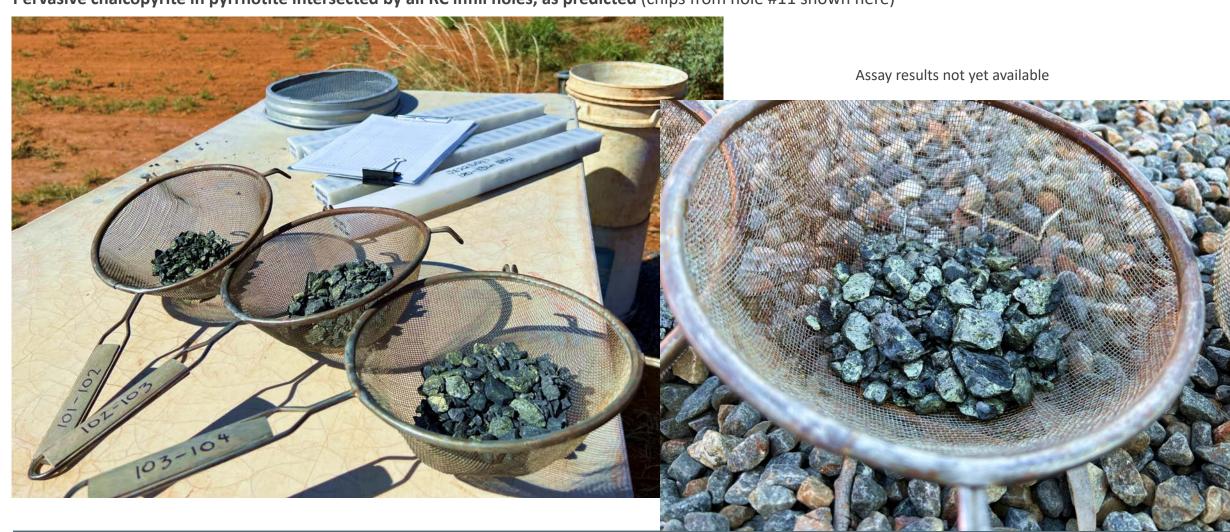

Jericho - RC drilling on J1 Lode

Jericho – visual observations of 16 initial RC holes

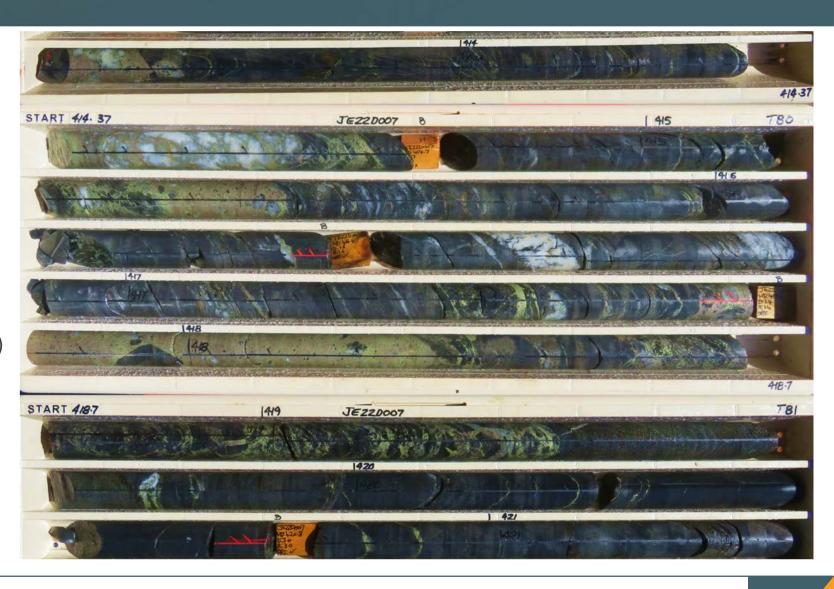

Pervasive chalcopyrite in pyrrhotite intersected by all RC infill holes, as predicted (chips from hole #11 shown here)

<u>Jericho – visual observations of 3 initial diamond holes</u>

 Diamond core shows abundant chalcopyrite in pyrrhotite from predicted locations below resource boundaries, evidencing strong potential for resource extensions (core from hole #7 shown here)

Assay results not yet available
