- **Performance aim:** Outperform its benchmark by 200 bps gross of fees (annualized).
- **Typical number of holdings:** Single Security 200-450\*\*, ETF Portfolio: 5-30

## Global Equity Strategy Guidelines

Richard Bernstein Advisors employs a macro-driven, top-down style to construct a global equity portfolio. The investment team uses quantitative indicators and the firm's macro-economic analysis to invest in global equity market segments at different times. Market segments chosen for emphasis or de-emphasis may vary from general market consensus views and the strategy may at times seek to identify areas where there is scarcity of capital and/or potentially overlooked investment opportunities. Leading exposures will vary among growth and value; small, mid and large cap; U.S. and non-U.S., and developed and emerging markets, based on RBA's assessment of a range of proprietary and nonproprietary quantitative indicators and the firm's macro-economic analysis and judgment.

## 5 Year Risk Measures

	Strategy (Gross)	Benchmark*

The specific securities mentioned are not representative of all the securities purchased, sold or recommended for advisory clients.

Current Themes as of 6/30/2024

U.S. Equities

- ↓ Underweight US equities
- ↑ With the profit cycle recovery well underway, we remain overweight economically-sensitive investments, including small caps, Industrials and Energy
- ↓ We attempt to reduce portfolio risk by maintaining lower exposure to expensive and crowded market themes such as US megacap growth stocks

Non-U.S. Equities

- ↑ Overweight non-US equities, with an emphasis on emerging markets

Region Weightings Q4 2010 - Q2 2024 (%)

■ Asia ex Japan ■ Canada ■ Emerging Markets ■ Europe ex UK ■ Japan ■ UK ■ US ■ Cash

**IMPORTANT DISCLOSURE**

Composite returns include the reinvestment of dividends and are presented in USD. Gross performance results presented are net of transaction costs, withholding taxes and direct expenses, but before management fees, custody fees and other indirect expenses. Net performance results are presented net of the applicable management fees, transaction costs, withholding taxes and direct expenses, but before custody fees and other indirect expenses. Net returns are calculated using actual investment management fees for each portfolio and, if applicable, performance-based fees. Net of fee composite returns are calculated by reducing each monthly composite pure gross rate of return. Policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request. Past performance is not a guarantee of future results. Wherever the potential for profit exists, there is also a potential for loss.

RBA's standard fee schedule is available on request and can be found in Part 2A of our Form ADV. Investment advisory fees are generally collected quarterly, which produces a compounding effect on the total rate of return net of management fees. The actual fee charged to an individual account may differ from the standard schedule depending on a number of factors including account type and size.

Net returns are calculated using actual investment management fees for each portfolio and, if applicable, performance-based fees. Actual account performance may vary.

Risks of Global Equity Strategy portfolios: RBA Global Equity Strategy portfolio returns may show a high level of variability and volatility. In addition to market risk, equity risk, non-U.S. investment risk and ETF risk, additional risks in these portfolios may result from RBA's selection of specific securities, since individual holdings may represent a significant percentage of a portfolio's holdings from time to time. Sources: portfolio characteristics, top ten holdings and sector weights calculated internally by RBA. Performance returns are of the RBA Global Equity Composite inception 10/31/2010.

The Global Equity Strategy Composite was created on December 31, 2018 and its inception date is October 31, 2010. The composite includes all fully discretionary accounts that invest in global equities. The investment objective of the strategy is to generate superior risk-adjusted returns as compared to global equities over a full market cycle. The composite benchmark is MSCI ACWI USD Net. The firm's list of composite descriptions is available upon request. The RBA Global Equity Strategy composite consists of all discretionary client accounts. The accounts do not use leverage or engage in short selling. Derivatives can be utilized in the strategy.

MSCI ACWI Index. The MSCI ACWI is a free-float-adjusted, market-capitalization-weighted index designed to measure the equity-market performance of global developed and emerging markets. MSCI ACWI Index is net of foreign withholding taxes.
