

Richard Bernstein Advisors

Richard Bernstein Advisors LLC (RBA) is an investment manager focusing on longer-term investment strategies that combine top-down, macroeconomic analysis and quantitatively-driven portfolio construction. We strive to be the leading provider of innovative investment solutions for investors, and our competitive edge is our research-driven macro style of investing.

Our top-down macro approach differentiates our firm from the more common, traditional bottom-up approach of most asset managers. Our extensive array of macro indicators allows us to construct portfolios that are innovative, risk-controlled, and focused on overall portfolio construction instead of individual stock selection.

Charts for the Beach

It's been a hot summer in New York City, and the markets have been red hot as well. Speculation abounds and a record portion of NYSE volume is now in stocks with prices under \$5, portfolio betas are at or near all-time highs, and companies are being encouraged to jettison their business models to borrow to hoard crypto.

It's always fun to return to classic novels for summer reading and accordingly, this year's Charts for the Beach returns to the time-honored basics of the economy and of investing.

So, wiggle your toes in the sand, grab a beer or a Hugo spritz, and enjoy!

1. Don't forget dividends!

Dividends are a major part of our current portfolios because investors seem to forget the power of compounding dividends during heady times. Our first chart points out that the Dow Jones Select Dividend Index is – believe it or not - actually neck-and-neck with NASDAQ over the last five years.

The competition between the two indices is even more interesting because Technology comprises only about 4% of the dividend index, but Utilities, Financials, and Consumer Staples comprise nearly 2/3rd of the index.

CHART 1:

Dow Jones Select Dividend Index vs. Nasdaq Composite Index

(Aug. 5, 2020 – Aug. 5, 2025)

Source: Richard Bernstein Advisors LLC, Bloomberg Finance L.P.

2. Has stagflation arrived?

Some stagflation (i.e., stagnating growth with rising inflation) appears in every late-cycle environment simply because inflation is a lagging variable relative to growth. As the cycle ages, growth tends to slow but inflation doesn't.

The current cycle is following that historical path. More importantly, though, it is the first time since prior to the Global Financial Crises that stagflation has appeared.

The following chart shows the ISM Services Prices Paid Index (a proxy for inflation) versus the ISM Services New Orders (a proxy for growth). One can see stagflation potentially forming for the first time in more than 15 years.

CHART 2:

ISM Services Prices Paid Index vs. ISM Services New Orders

(Jun. 30, 1997 – Jul. 31, 2025)

Source: Richard Bernstein Advisors LLC, Bloomberg Finance L.P.

3. The Maseratis and the Blahniks are on sale

Every consumer purchase involves a value proposition. If one could purchase a Maserati for the price of a Chevy or a pair of Manolo Blahnik shoes for the price of Skechers, most consumers would certainly do so. In fact, they'd probably ask for two!

However, somehow people forget the value proposition when they buy stocks. Today, the Maseratis and the Blahniks are on sale.

Non-US high quality companies offer virtually the same earnings growth as the US's Magnificent 7 stocks (17% vs. 16%), offers nearly 10 times the dividend yield (2.3% vs. 0.3%), and is valued at about a 35% discount.

CHART 3:
Expected Total Return

(EPS Growth + Dividend Yield as of 8/5/2025)

Source: Richard Bernstein Advisors LLC, MSCI, S&P Global, Bloomberg Finance L.P. Green shading denotes an OW position and Red denotes an UW position in our strategies. NTM = Next Twelve Months. Sectors are the S&P 500® GICS Sectors. For Index descriptors, see "Index Descriptions" at end of document.

4. Analysts won't warn you if there's a profits slowdown looming

Analyst estimates tend to follow performance. If stocks go up, then analysts tend to raise estimates. If stocks go down, then they tend to lower estimates.

The "Liberation Day" selloff prompted analysts to significantly cut their estimates when stocks fell. The subsequent rebound in the market then encouraged analysts to raise their estimates, and those upward revisions have fostered a new consensus that the profits cycle will accelerate. Contrary to that view, our forecast remains that profits are decelerating.

A look back at the Tech Bubble indicates it might not be prudent to follow estimate revisions during a speculative period. In December 2000, several quarters past the peak of that profits cycle, analysts were still forecasting nearly 9% earnings growth for 2001. They gradually lowered their growth forecasts, but never enough to account for the actual drop of 31%.

CHART 4:
EPS Growth: Calendar Year Estimates vs. S&P 500® Operating Actual
(Dec. 2000 – Dec. 2001)

Source: Richard Bernstein Advisors LLC, I/B/E/S, S&P Global

5. Not getting paid to take credit risk

Perhaps our most out-of-consensus position right now is that our fixed-income portfolios have virtually no credit exposure. Historically, the time to take credit risk is when credit spreads are abnormally wide and the profits cycle is troughing. Today, credit spreads are abnormally narrow and the profits cycle is peaking.

The next chart shows that today's high yield bond spreads are similar to those prior to the Asia/Russia credit crises, the global financial crisis, and 2022's inflation fears and Fed tightening. That suggests to us caution might currently be warranted toward credit especially within the context of profits decelerating.

CHART 5:
US High Yield Bond Spreads
(Aug. 11, 1980 – Aug. 5, 2025)

Source: Richard Bernstein Advisors LLC, Bloomberg Finance L.P.

6. Gold as a ballast against uncertainty

Some investors like to trade gold, but we prefer to think in terms of an allocation to gold. We hold gold not to make short-term gains, but rather to act as a ballast against the unexpected.

There has historically been a relationship between gold returns and uncertainty. The chart below shows gold's year/year returns versus the National Federation of Independent Businesses (NFIB) Uncertainty Index.

This explains a lot about gold's recent returns, but also suggests that gold might not provide outsized returns should uncertainty subside.

To us, the only certainty in the markets is there will likely be continued uncertainty, and we are maintaining our gold allocations within our multi-asset portfolios.

INDEX DESCRIPTIONS:

The following descriptions, while believed to be accurate, are in some cases abbreviated versions of more detailed or comprehensive definitions available from the sponsors or originators of the respective indices. Anyone interested in such further details is free to consult each such sponsor's or originator's website.

The past performance of an index is not a guarantee of future results.

Each index reflects an unmanaged universe of securities without any deduction for advisory fees or other expenses that would reduce actual returns, as well as the reinvestment of all income and dividends. An actual investment in the securities included in the index would require an investor to incur transaction costs, which would lower the performance results.

Indices are not actively managed and investors cannot invest directly in the indices.

Dow Jones Utility Average: The Dow Jones Utility Average Index is a price-weighted average of 15 utility companies that are listed on the New York Stock Exchange and are involved in the production of electrical energy. The average as it is known today began on January 2, 1929 with a base value of 50.

Dow Jones U.S. Dividend Index: Dow Jones U.S. Dividend 100 Total Return Index measures the stock performance of high dividend yielding U.S. companies with a record of consistently paying dividends, selected for fundamental strength relative to their peers, based on financial ratios. It is calculated in USD with dividends reinvested.

Nasdaq: The Nasdaq Composite Index: The NASDAQ Composite Index is a broad-based market-capitalization-weighted index of stocks that includes all domestic and international based common type stocks listed on The NASDAQ Stock Market.

Mag 7: The Magnificent 7 (Mag 7) are a group of 7 widely-traded companies classified in the United States and representing the Communications, Consumer Discretionary and Technology sectors as defined by the Global Industry Classification Standard (GICS®) developed by MSCI Barra and Standard & Poor's. These consist of AAPL, AMZN, GOOGL, META, MSFT, NVDA and TSLA.

About Richard Bernstein Advisors

Richard Bernstein Advisors LLC is an investment manager focusing on long-only, global equity and asset allocation investment strategies. RBA runs ETF asset allocation SMA portfolios at leading wirehouses, independent broker/dealers, TAMPS and on select RIA platforms. Additionally, RBA partners with several firms including Eaton Vance Corporation and First Trust Portfolios LP, and currently has \$16.6 billion collectively under management and advisement as of June 30, 2025.
