# INTEGRATE DOORDASH WITH TOAST

Streamline operations, easily manage your menu, and increase order accuracy by integrating Toast with DoorDash.

## WHY INTEGRATE DOORDASH WITH TOAST?

Integrating creates a bridge for DoorDash to send and retrieve data from Toast so that you can manage incoming orders and menu updates in one place.

Once you've integrated with Toast you will be able to:

- **Collect tips for in-house staff for pickup orders:** Allow customers to give your in-house staff tips on pickup orders
- **86 items:** Mark items as out-of-stock on DoorDash directly through your POS
- **Make updates to your DoorDash menu in real-time:** Push menu changes made through your POS to DoorDash immediately
- **Pause your store:** Deactivate your store on DoorDash directly through your POS
- **Cancel orders:** Cancel DoorDash orders and get notifications when customers cancel

## BENEFITS

### Smoother operations

Have your dine-in, takeout, and delivery orders appear in the same place—no need to rent a tablet or printer, saving you money and counter space.

### Simple menu & store management

Menu and store changes made through Toast will automatically sync to your DoorDash menu.

### Increase order accuracy

DoorDash orders are automatically sent to your POS, eliminating room for error.

## GETTING STARTED

- 1 Log in to the [DoorDash Merchant Portal](#).
- 2 On the left menu, click settings, then select Integrations from the dropdown options.
- 3 Locate Toast and select Get Started.
