

## DIFFERENCE BETWEEN STANNOUS FLUORIDE AND SODIUM FLUORIDE

Stannous fluoride is an anti-bacterial agent that's clinically proven to protect against gingivitis, plaque and tooth sensitivity, while still providing the trusted cavity protection you expect from Crest. Although sodium fluoride protects against cavities, it doesn't provide protection from these other conditions. Crest Pro-Health Toothpaste is the only brand that offers such a wide range of benefits in just one tube! Crest Pro-Health toothpaste with stabilized stannous fluoride provides protection against cavities, gingivitis, plaque, sensitive teeth, tartar buildup and it freshens breath. And it whitens your teeth, too.

### What is the Polyfluorite System™?

The Polyfluorite System™ found only in Crest® PRO-HEALTH™ Toothpaste combines two powerful ingredients: therapeutic stannous fluoride to protect against plaque, gingivitis, cavities and tooth sensitivity; and sodium hexametaphosphate, which is a stain- and tartar-fighting ingredient. Together they deliver a unique, comprehensive protection for your teeth like never before.
