

# CARECLAVE FACT CHECK!

The reprocessing and lubrication of dental handpieces is too time-, money- and space-intensive? Who cares! More than 1,000 dental practices worldwide have already found the right solution. To be precise: The right 4-in-1 solution – Careclave. Find out in the following fact check how your practice can also benefit from the innovative device concept!

## Myth 1: „Careclave is more expensive than comparable device combinations?“

✘ Wrong!

Careclave combines a reprocessing and lubrication device with a modern autoclave. **Device combinations of comparable quality are already up to 1,000 € more expensive to buy!**

This system has proven itself. Every second new practice already relies on Careclave!

## Myth 2: “But two devices are safer than one?“

✘ Wrong!

The lubrication devices currently on the market do not sterilize. So if the autoclave fails, then even a care device can not compensate for this failure.

1 device, 2 systems and numerous independent components ensure that your customers **can continue to use other reprocessing functions even in the unlikely event of a malfunction.**

### Myth 3: „Maintenance & validation costs too much!“

! That doesn't have to be the case

Because fewer devices in the decontamination room cause fewer running costs. Our 4-in-1 solution is not only cheaper to purchase, but also **reduces the costs for maintenance and validations by about 6,000 €** within 11 years.

### Myth 4: „My dental handpieces need to be constantly repaired!“

! That doesn't have to be the case

Insufficient chuck care in manual and mechanical reprocessing is the most common reason for failures and expensive repairs of the transfer instruments.

Thanks to the documented chuck care as well as the systematic cleaning and oiling, instruments with Careclave **remain in excellent condition even in the long term.**

### Myth 5: „We have no place in the processing room?“

! That doesn't have to be the case

We want to solve problems from practice for practice. With Careclave we provide your customers with the right solution for the space problem on the worktop.

Because with the device concept for cleaning, disinfection, lubrication and sterilization, customers have **up to 45% more space for the safe reprocessing of their instruments.** They can do without an extra lubrication device.
