More Research Less Cancer

Thank you for considering leaving a gift in your Will to Cancer Research UK.

By leaving a gift in your Will to power cutting-edge research, you'll join our global community of Visionaries: philanthropists, advocates and ambassadors who trust in our mission and are determined to leave a legacy for future generations.

Since the mid-1980s, more than a million lives have been saved from cancer in the UK thanks to advances in the prevention, detection, diagnosis and treatment of the disease.*

With the help of our Visionaries, we'll save millions more.

"When I wrote my Will, I thought it would be a conversation about death. But when I approached it from the perspective of wanting to achieve something important for the future, it was exciting. I felt empowered. And it ended up paving the way for a new stage in my life, where I've been absorbed in Cancer Research UK's work – as a mentor, a volunteer and more. So, it turned out my Will wasn't my last chapter, but the next chapter of a new phase of life!"

Alison
Cancer Research UK Visionary

More gifts, more discoveries

How to leave your legacy

After taking care of your loved ones, you may want to support a cause close to your heart. A third of the money we raise to beat cancer is from gifts in Wills. The most common types of gift are:

Percentage share

This is the most beneficial type of gift because it's a percentage of your estate, rather than a fixed amount.

This means it retains its value and won't be affected by inflation. It may also reduce your inheritance tax liability.

If you'd like to leave this type of gift, here's some suggested wording you could use:

'I give [...] % of the residue of my real and personal estate to Cancer Research UK (insert registered charity number*) of 2 Redman Place, London, E20 1JQ for their general charitable purposes absolutely and the receipt of the Honorary Treasurer or the proper officer for the time being of Cancer Research UK shall be a complete discharge to my executors.'

Index-linked lump sum

This is a specific sum of money linked to the index of retail prices. This means any amount pledged would keep its value in line with any possible inflation increases.

If you'd like to leave this type of gift, here's some suggested wording:

'I give to Cancer Research UK (insert registered charity number*) of 2 Redman Place, London, E20 1JQ for their general charitable purposes such sum (the legacy) as shall be produced by multiplying [amount in words] pounds (£ [amount in figures]) by the index figure in the Retail Prices Index for the month immediately preceding my death and dividing by the index figure for the month in which my Will is signed.'

Lump sum

This is a specific amount of money given in a Will. As it's subject to inflation, the value of the gift can decrease over time. If you'd like to leave this type of gift, here's some suggested wording:

'I give the sum of [in words] pounds (£ [amount in figures]) to Cancer Research UK (insert registered charity number*) of 2 Redman Place, London, E20 1JQ for their general charitable purposes absolutely and the receipt of the Honorary Treasurer or the proper officer for the time being of Cancer Research UK shall be a complete discharge to my executors.'

Specific gift

A particular item, such as a car, jewellery or property. If you'd like to leave a specific gift, here's some suggested wording:

'I give to Cancer Research UK (insert registered charity number*) of 2 Redman Place, London, E20 1JQ for their general charitable purposes absolutely, my [name and description of item].'

Life interest trust

If you want a charity to be your ultimate beneficiary, but you also want to ensure adequate provisions for your loved ones who survive you, one option is to include a life interest trust in your Will (or, in some limited circumstances, to settle a life interest trust during your lifetime). A life interest trust effectively gives your spouse or other beneficiaries the enjoyment of your estate (or part of your estate) for their lifetime, while preserving the capital of your estate for your ultimate charitable beneficiary.

When a life interest trust is established, either during your lifetime or upon your death, there may be inheritance tax consequences. We advise you seek legal advice regarding this option to fully understand how the trust works and the tax implications.

"Legacies are an easy way to give. They offer an opportunity to do something more meaningful than is possible in your lifetime, when financial decisions like buying a house and embarking on other projects can get in the way. Once you make the decision and document it, that's it. It's ready for when it's needed."

Tax-efficient giving from your estate

Inheritance tax relief

If you leave a gift in your Will, you may be able to reduce your inheritance tax liability. Gifts to charities are 100% tax-free and are taken out of your estate before tax is calculated. Since April 2017, if you leave 10% of your net estate to charity, after certain deductions your inheritance tax rate will be reduced from 40% to 36%. The example below outlines the benefit that this reduced rate can have for an estate worth £5,000,000.

Example: The gross estate value is worth £5,000,000 for inheritance tax purposes and a one 'nil-rate band' (£325,000) has been applied leaving a net taxable estate of £4,675,000

Item	0% gifted to charity	5% gifted to charity	10% gifted to charity
Charitable gift	£0	£250,000	£500,000
Inheritance tax due	£4,765,000 at 40%	£4,425,000 at 40%	£125,000
Amount of payable tax	£1,870,000	£1,770,000	£1,503,000
Estate balance for distribution	£3,120,000 to beneficiaries £0 to charity	£2,980,800 to beneficiaries £250,000 to charity	£2,997,000 to beneficiaries £500,000 to charity

From Alec's legacy to Professor Tomlinson's discovery

In 2004, we received a generous gift from the Will of philanthropist Alec Catt. His legacy helped Professor Ian Tomlinson and his team to discover gene mutations that could increase the risk of bowel, breast and prostate cancer.

In 2007 and 2008, the team identified that these genes were involved in repairing DNA damage, an insight that helped build our understanding of how genetic faults can cause cancer.

This discovery is now helping scientists to develop methods to accurately predict cancer risk, so people at high risk can be monitored more closely to detect cancer sooner if it develops. Detecting cancer early is a powerful tool to improve survival, as it allows doctors to intervene when treatment is more likely to be successful.

Professor Ian Tomlinson

Director, Edinburgh Cancer Research Centre, University of Edinburgh

Alec's legacy not only allowed us to improve our understanding of how genetic faults can cause cancer, but also helped Professor Tomlinson become a world-leading expert in his field and train the research leaders of tomorrow. In recognition of his work, Professor Tomlinson was elected to the Royal Society in 2019.

Today

Developing methods to more accurately predict cancer risk

"Having seen the impact of cancer across several generations of my family, I chose to leave a gift to Cancer Research UK. I don't have children and my nephew will inherit from multiple estates. Inheritance tax relief seemed like a simple way to give to charity and for my overall estate to benefit from the lower tax rate."

Tax Adviser and Cancer Research UK Visionary

How to restrict a legacy and future-proof your Will

If you choose to leave a legacy to Cancer Research UK, you can be sure you'll be funding world-class science with the greatest potential to change and improve the lives of people affected by cancer.

We always endeavour to fulfil your wishes if you choose to direct your pledge towards a specific cancer type, area of research or geographical location. But there are a few things to consider when drafting a restriction (a specific purpose for your gift) into your Will.

As the landscape of cancer research is changing rapidly, the most urgent research areas right now might not be the same in the future. As scientists across the globe discover new ways to prevent, diagnose and treat cancer, it's essential we remain flexible and able to fund the most critical, courageous and innovative research. That's why it's vital to future-proof legacy restrictions.

For example, if there's no longer a need for research into a specific cancer type and you've written a restriction for that purpose, then we might not be able to receive your gift. Similarly, we might not be able to receive a gift with a geographical restriction if we're not conducting research projects in that location.

Nonetheless, there are ways for you can restrict your gift while still making sure we use it to power world-leading research. Our Legacy Partnership team will be very happy to discuss all the options to find the best one for you.

Expression of wish

To future-proof your Will, you could use an 'expression of wish'. We'll seek to honour this wish, but if we've reached the fortunate position of no longer requiring funding for your primary wish, the gift will be directed to other equally important areas of our work.

By restricting your gift to cancers of unmet need, you can make sure your legacy powers vital research into cancer types where progress hasn't advanced at the pace of other cancers.

Here's some suggested wording you can use which proposes a broader alternative destination for your gift if your primary wish isn't viable:

'I leave [type of gift specified] to Cancer Research UK (insert registered charity number*) of 2 Redman Place, London, E20 1JQ and I express the wish that it is applied to [eg cervical cancer research], failing which I leave [type of gift specified] to Cancer Research UK to be applied to research into [eg cancers of unmet need].'

Alternatively, you can request for Cancer Research UK to direct your gift to another important area of world-class science if your primary wish isn't viable. Here's some suggested wording:

'I leave [type of gift specified] to Cancer Research UK (insert registered charity number*) of 2 Redman Place, London, E20 1JQ and I express the wish that it is applied to [eg cervical cancer research], failing which I leave [type of gift specified] to Cancer Research UK to be applied as Cancer Research UK see fit.'

Letter of wishes

Another alternative is to write a 'letter of wishes' alongside your Will.

The terms of the Will leave the gift to be managed by the executors and trustees, while the letter of wishes guides them as to how the gift should be used. It's important to note that the letter isn't binding, but it can offer a greater degree of flexibility in terms of the choices you may wish to make. The letter could be structured along the lines of:

'It is my primary wish that [the gift specified in clause x of My Will] to Cancer Research UK (insert registered charity number*) of 2 Redman Place, London, E20 1JQ be used for research into [eg early detection research]. I will retain an ongoing dialogue with the charity to identify another area of research should the charity reach a position where funding is no longer required for [eg early detection research] and I would ask you to have regard to any further notes, memoranda or wishes that I make known to you in that regard.'

*Registered charity numbers: England and Wales (1089464), Scotland (SC041666), the Isle of Man (1103) and Jersey (247)

Lasting legacies, longer lives

Our story is one of investment consistently turning into improvements for people affected by cancer.

We've taken huge steps forward. But we must – and will – go further, faster. Our vision is a world where everybody lives longer, better lives, free from the fear of cancer. And your visionary support is what will take us there.

Globally
18 million
people are diagnosed
with cancer every year

In the last 50 years,
our work has helped
double cancer
survival in the UK

Thank you

**Thank you for your interest in leaving
a visionary legacy to create a better
future for people affected by cancer.**

Rapid advances in genomic sequencing?
Harnessing the as-yet untapped potential of
AI and machine learning? What was science
fiction only five years ago is rapidly becoming
science fact.

But cancer still ends millions of lives.
Thousands of children still don't live long
enough to become teenagers. Mums, dads,
uncles, aunts and grandparents leave their
families too early, too often.

You can help make the crucial difference.
More Visionaries mean more people living
with cancer, not dying from it. More Visionaries
mean more treatments, more therapies and
more hope. More Visionaries mean more
research.

**And more research means
less cancer.**

More Research Less Cancer

Bold Visionaries, better futures
