

# Wind Management Plan

| Gusts under 20mph  | Gusts 20-24mph  | Gusts 25-35mph  | Gusts over 35mph  | Gusts over 40mph   |
|--|---|---|---|--|
| Hard standing professional grade gazebos can be used with double weights (24kg per leg)                                | Where wind speeds go over 20mph, any non-professional grade gazebos should be removed from site.                  | Do not erect professional grade gazebos and marquees in wind gusts over 25mph                                 | Consideration of event cancellation                                       | Event cancelled  |
| Professional grade gazebos can be used on grassed areas that are pegged. Weighted legs is preferred but not essential. | Remove sides on hard standings professional grade gazebos   | Collapse and remove any Professional grade gazebos on hard standing that are in use                           | Collapse and remove any gazebos that are in use in wind gusts above 35mph | Marquees should not be used and deconstructed, if safe to do so. |
| Gazebos to be checked for suitable weighting and/or pegging  | Consider whether sides are necessary on professional grade gazebos  | Consider whether all flags and branding can be used   | Remove any further branding, flags and signage                            |  |
| Marquees can be used   | No inflatables to be used over 24mph  | Remove sides from professional grade gazebos  | Remove speakers from stacks or stands or stop using PA system if unsafe.  |  |
|  | Ensure PA speakers are appropriately secured  | Only professional grade gazebos and marquees can be used on site and will need to be suitably pegged on grass |   |  |
|  | Brief staff and volunteers to be stay alert to signage and structures being vulnerable and to report any concerns |   |   |  |
