Patient details Patient agreement to Patient's surname/family name: systemic anti-cancer therapy (SACT) Patient's first name(s): Isatuximab, Pomalidomide and Dexamethasone Date of birth: NHS number: (or other identifier) **Hospital/NHS Trust/NHS Board:** Special requirements: (eg other language/other communication method) Responsible consultant: Name: Job title: ____ Name of proposed course of treatment (include brief explanation if medical term not clear) ☐ Isatuximab, Pomalidomide and Dexamethasone for the treatment of multiple myeloma. Isatuximab is given intravenously on days 1 and 15 (in cycle 1 only, Isatuximab is also given on days 8 and 22). Pomalidomide is taken orally once each day on days 1 to 21, followed by a 7 day break. Dexamethasone is taken orally once on days 1, 8, 15 and 22 (you may have this intravenously in the first cycle). Each treatment cycle lasts for 28 days. Treatment is continued until disease progression, unacceptable toxicity or withdrawal of consent. Where will I have treatment? ☐ Outpatient ☐ Day unit/case Inpatient Other: Statement of health professional (to be filled in by health professional with appropriate knowledge of proposed procedure, as specified in the hospital/Trust/NHS board's consent policy) ▼ Tick all relevant boxes ☐ I confirm the patient has capacity to give consent. I have explained the course of treatment and intended benefit to the patient.

The intended benefits (there are no guarantees about outcome)

Disease control or palliative – the aim is not to cure, but to control or shrink the disease at relapse and improve both quality of life and survival.

Other risks continued:

All intravenous drugs may leak out of the vein
while it is being given (extravasation) and can
damage the tissue around the vein. Tell the
nurse straight away if you have any stinging,
pain, redness or swelling around the vein. It's
uncommon but important to deal with quickly.
Uncommonly: allergic reactions to Pomalidomide, low thyroid hormone levels.
Rarely: a serious brain infection (face drooping,
speech problems, difficulty walking), severe skin reactions (sore red patches that blister and peel).
☐ Changes in memory, concentration, confusion.
Some anti-cancer medicines can damage ovaries and sperm which may lead to infertility and/or early menopause.
☐ Complications of treatment can occasionally be
life-threatening and may result in death. The
risks are different for every individual. Potentially
life-threatening complications include those listed
on this form, but, other exceedingly rare side
effects may also be life-threatening

Guidance for health professionals

(to be read in conjunction with the hospital's consent policy)

Patient identifier/label

What a consent form is for

This form documents the patient's agreement to go ahead with the treatment you have proposed. It is not a legal waiver – if patients, for example, do not receive enough information on which to base their decision, then the consent may not be valid, even though the form has been signed. Patients are also entitled to change their mind after signing the form, if they retain capacity to do so. The form should act as an aide-memoir to health professionals and patients, by providing a checklist of the kind of information patients should be offered, and by enabling the patient to have a written record of the main points discussed. In no way should the written information provided for the patient be regarded as a substitute for face-to-face discussions with the patient.

The law on consent

See the following publications for a comprehensive summary of the law on consent. Consent: Patients and doctors making decisions together, GMC 2020 (gmc-uk.org/guidance). Reference guide to consent for examination or treatment, Department of Health, 2nd edition 2009 (doh.gov.uk).

Who can give consent

Everyone aged 16 or over is presumed to have the capacity to give consent for themselves, unless the opposite is demonstrated. For young people, it is good practice to involve those with parental responsibility in the consent discussions, unless specifically asked not to. A person with parental responsibility must sign this form for a child or young person under the age of 16. Such patients should be given the opportunity to 'assent' to treatment if they wish. If a patient has the capacity to give consent but is physically unable to sign a form, you should complete this form as usual and ask an independent witness to confirm that the patient has given consent orally or non-verbally.

When NOT to use this form

If the patient lacks the capacity to give consent, you should use an alternative form available for this purpose (dependent on patient age). A patient lacks capacity if they have an impairment or disturbance of the brain, affecting the way their mind works. For example, if they cannot do one of the following:

- understand information about the decision to be made
- retain that information in their mind
- use or weigh this information as a part of their decision making process, or

 communicate their decision (by talking, using sign language or any other means)

You should always take all reasonable steps (for example involving more specialist colleagues) to support a patient in making their own decision, before concluding that they are unable to do so. Relatives cannot be asked to sign a form on behalf of an adult who lacks capacity to consent for themselves, unless they have been given the authority to do so under a Lasting Power of Attorney or as a court deputy.

Information

Information about what the treatment will involve, its benefits and risks (including side-effects and complications) and alternatives to the particular procedure proposed, is crucial for patients when making up their minds. The courts have stated that patients should be told about 'significant risks which would affect the judgement of a reasonable patient'. 'Significant' has not been legally defined, but the GMC requires doctors to tell patients about 'significant, unavoidable or frequently occurring' risks. If patients make clear they have particular concerns about certain kinds of risk, you should ensure that they are informed about these risks. even if very small or rare. You should always answer questions honestly. Sometimes, patients may make it clear that they do not want to have any information about the options, but want you to decide on their behalf. In such circumstances, you should do your best to ensure that the patient receives at least very basic information about what is proposed. Where information is refused, you should document this on the consent form or in the patient's notes.

NHS Scotland

NHS Scotland staff should refer to Healthcare Improvement Scotland. Guidance on consent for SACT and local NHS Board guidance on consent aligned to the Scottish legal framework.
