NewMotion

Europe's Largest Electric Charging Partner

No matter your lifestyle, business, car or budget, we are committed to making electric driving as simple and convenient to as many people as possible.

We do this by designing, building and supporting award-winning smart charge services including charge points, a mobile app and charge card allowing access to tens of thousands of charge points across Europe.

Charge Points & Subscriptions

for Home

Home Line

NewMotion brings the ultimate charge experience to your doorstep with smart, safe and award winning charge points capable of providing charging services for any type of residence.

Residential Charge Points

All with socket type 2.

Home Standard

Rated output: 3.7 kW

Home Fast

Rated output: up to 22 kW*

Home Advanced

Rated output: up to 22 kW*

* The standard setting of the charge point is 16A per phase. If you wish, we can remotely change the setting for you without any additional cost.

Tethered Cable vs Socket

Combining functional design and smart technology, our charge points provide you the option to charge with ease and store your charge cable clean and off the ground. Are you the only user? Get the a charge point with a tethered cable. Multiple users for your charge point? Get the socket model to provide flexibility to handle all types of electric cars.

Getting connected with a NewMotion charge point at home couldn't be easier. With a personalised home installation service and support, you'll be plugged in in no time.

Subscriptions for Home

Get the most out of your charge point!

Our subscriptions offer you the opportunity to get the most out of your intelligent charge point. By providing real-time insight to automatic reimbursement, these smart services help improve your charge experience. Keep reading for more information on the subscription possibilities.

Home Standard/Fast

Choose your optional smart upgrade to take full advantage of our intelligent charge points.

- 24/7 Helpdesk.
- Regular firmware updates.
- Online management of your charge point.
- Charge session insights and history: monitor data such as amount of sessions, kWh usage costs and CO2 savings.
- Export functionality of your charging sessions.
- Automatic reimbursement of non-commercial electricity costs.
- Plug & charge.
- Remote control functionality to enable you to reset or stop your charge session from a distance.
- Email notifications.
- Monthly Contract - Ability to cancel at anytime.

Plus *

Earn Money for Sharing your Home Advanced Charge point, with the essential add-on helping achieve top performance of the Home Advanced for you and your guests. Our subscription makes it easy to get reimbursed for energy costs and includes access to all our standard features, PLUS:

- Guest usage.
- Automatic reimbursement of guest usage costs.
- Charge card access management (e.g. free charging for neighbours).

** This subscription is necessary with the acquisition of a Home Advanced charge point and will automatically be added to our offer.*

Dynamic Power Management

Experience optimal charging speed with no risk of overloading your grid connection.

- Always charge at the highest possible speed to have your car ready for the road at any time.
- Avoid overloading your grid connection at home.
- Avoid the need of a costly grid connection upgrade.

Dynamic Power Management makes sure that the available electricity capacity of your grid connection at home is dynamically balanced and distributed in realtime between household devices and charge point. This service is only available in combination with the Home Advanced.

This image shows two charge points on one pole. All these items are sold as separate products.

Subscriptions for Business

Get the most out of your charge point!

Our subscriptions offer you the opportunity to get the most out of your charge station. Benefit from smart services that will help you to optimize and easily manage your charge location, such as real-time insights and automatic reimbursement. Keep reading for more information on the subscription possibilities.

Plus*

Our subscription makes it easy to manage your charge location.

- Guest usage.
- Automatic reimbursement of guest usage costs.
- Charge card access management (e.g. free charging for employees).

Plus get access to our standard features.

- 24/7 Helpdesk.
- Regular firmware updates.
- Online management of your charge point.
- Charge session insights and history: monitor data such as amount of sessions, kWh usage costs and CO2 savings.
- Export functionality of your charging sessions.
- Plug & charge.
- Remote control functionality to enable you to start, reset or stop your charge session from a distance.
- Email notifications.

Dynamic Power Sharing

Optimal energy distribution. Ideal when using multiple charge points or for future expansion.

- Charge as quick and efficient as possible with the available electricity.
- Automatic distribution of available energy capacity.
- Ideal when using multiple charge points or for future expansion.

Only available with a combination of NewMotion Business Lite and Business Pro charge points.

* *This subscription is necessary with the acquisition of a Business Pro or Lite charge point and will automatically be added to our offer.*
Price per month per charge point.

Group Charge App for Businesses

Joined charging at your working place

Our Group Charge App helps companies and their employees optimize the utilisation of the company's charge points. With electric driving becoming more popular, businesses face a common problem: fully charged EV's that are still plugged occupy the charge points for others. Say hello to the social charge network for business. With the Group Charge App, employees can directly communicate with each other in a closed user group via a chat functionality, check up-to-date status of the company's charge points, see who is charging, get notified when charge points are available or ask other colleagues to move their fully charged car.

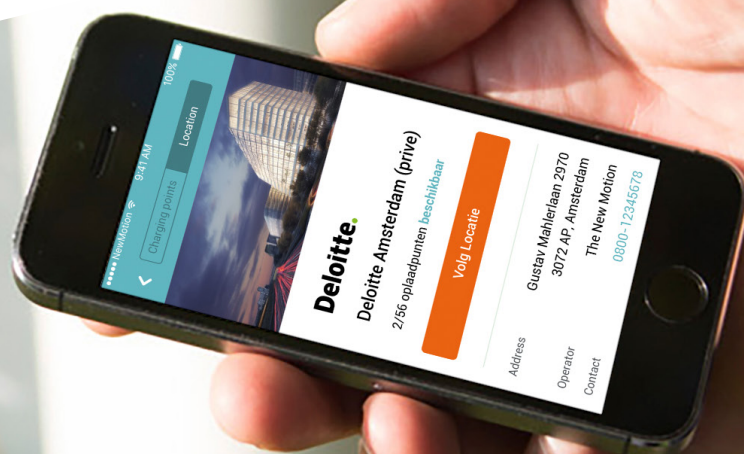

Group Charge App

Benefits for companies

- Provide a more efficient way for your employees to communicate by wasting less time on excessive WhatsApp-groups.
- Reduce your total cost of ownership.
- Lower your investment on (additional) charging infrastructure by up to 200%.
- Increase the utilization of your charge point(s) by 200% and measure EV-drivers' social behavior (3 EV's per day per point, instead of only 1).
- Maximize your fleet's total electric kilometers.
- Share charge point statuses with employees without publishing the charge locations to external drivers.
- Make your employees happy by maximizing the availability of the charge points.

Benefits for employees

- Join the charge queue and get a notification once a charge point is available.
- Get in direct contact with relevant colleagues via the chat-functionality instead of using unorganized WhatsApp groups.
- Notify colleagues with a fully charged car that is still plugged in to the charge point.
- Get notified when your own car is fully charged so that you can free up the space for other colleagues.
- See real-time status of the charge points' availability and who is occupying the charge point.

Customisation & Accessories

Colour Customisation

NewMotion charge points come standard with a white front cover (RAL 9010) and a grey back cover (RAL 7031).

Front cover colour personalisation

There are 3 additional standard colour options

RAL 7016

Grey

RAL 9005

Black

RAL 6007

Green

Custom colour

Any RAL classic colour of your choice.

Select from our colour variants, go bold to promote electric driving, or you can even select a custom color to match your home or company brand colours.

Poles for Charge Points

The charge point can be mounted on the wall (wall mounts are provided by default with the charge point) or on a pole.

Pole for a single NewMotion charge point

Length: 113 cm

Pole for two NewMotion charge points

Length: 113 cm

Pole for a single NewMotion charge point & signage

Length: 200 cm

signage not included in the price

Pole for two NewMotion charge points & signage

Length: 200 cm

signage not included in the price

Get in touch and we'll advise you about your specific location and what smart installation means for you.

**Concrete base
(to install the pole in the soil)**

Signage for Charge Points

The signage can be mounted on the wall (wall mounts are provided by default with the charge point) or on a pole.

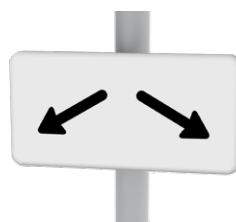

“charging location” *

Dimensions:
30 x 45 cm (w x h)

“electric vehicles only” *

Dimensions:
30 x 15 cm (w x h)

“left and right” *

Dimensions:
30 x 15 cm (w x h)

Pole for signage **

Length: 330 cm

* Includes mounting brackets. Either wall brackets or pole brackets, depending on your order.

** The pole is not suitable for charge points mounting.
