

Annual Report 2014

GBIF

Global Biodiversity
Information Facility

What is GBIF?

The Global Biodiversity Information Facility is a network of governments and international organizations, collaborating with a Secretariat in Copenhagen, Denmark, to provide a vital infrastructure for research and policy. It enables information about all forms of life on Earth, gathered over centuries in all parts of the globe, to be readily accessible by anyone, anywhere. Through GBIF.org, web services and a growing number of national and thematic portals, GBIF users have free access to more than 14,000 datasets published by over 750 institutions, ranging from zoological and botanical collections to observations by citizen scientists and surveys from research expeditions.

GBIF's vision

A world in which biodiversity information is freely and universally available for science, society and a sustainable future.

2014 Highlights

GBIF GOVERNING BOARD AGREES NEW APPROACH TO STANDARD LICENSING OF DATASETS AND STREAMLINED PROCESS FOR ENDORSING DATA PUBLISHERS

NUMBER OF SPECIES OCCURRENCE RECORDS PASSES HALF A BILLION

DETAILED PAGES ON RECORDS INCLUDE FIELD NOTES, SAMPLING METHODOLOGIES, COLLECTOR NAMES

VISITS TO GBIF.ORG PASS 1.1M, NEARLY 85,000 REQUESTS FOR DATA DOWNLOADS

USERS CAN NOW FILTER FOR RECORDS WITH IMAGES, VIDEOS, SOUND RECORDINGS AS WELL AS TYPE STATUS

DATA PUBLISHING TRENDS AND ANALYTICS AVAILABLE ON GBIF.ORG FOR ALL COUNTRIES

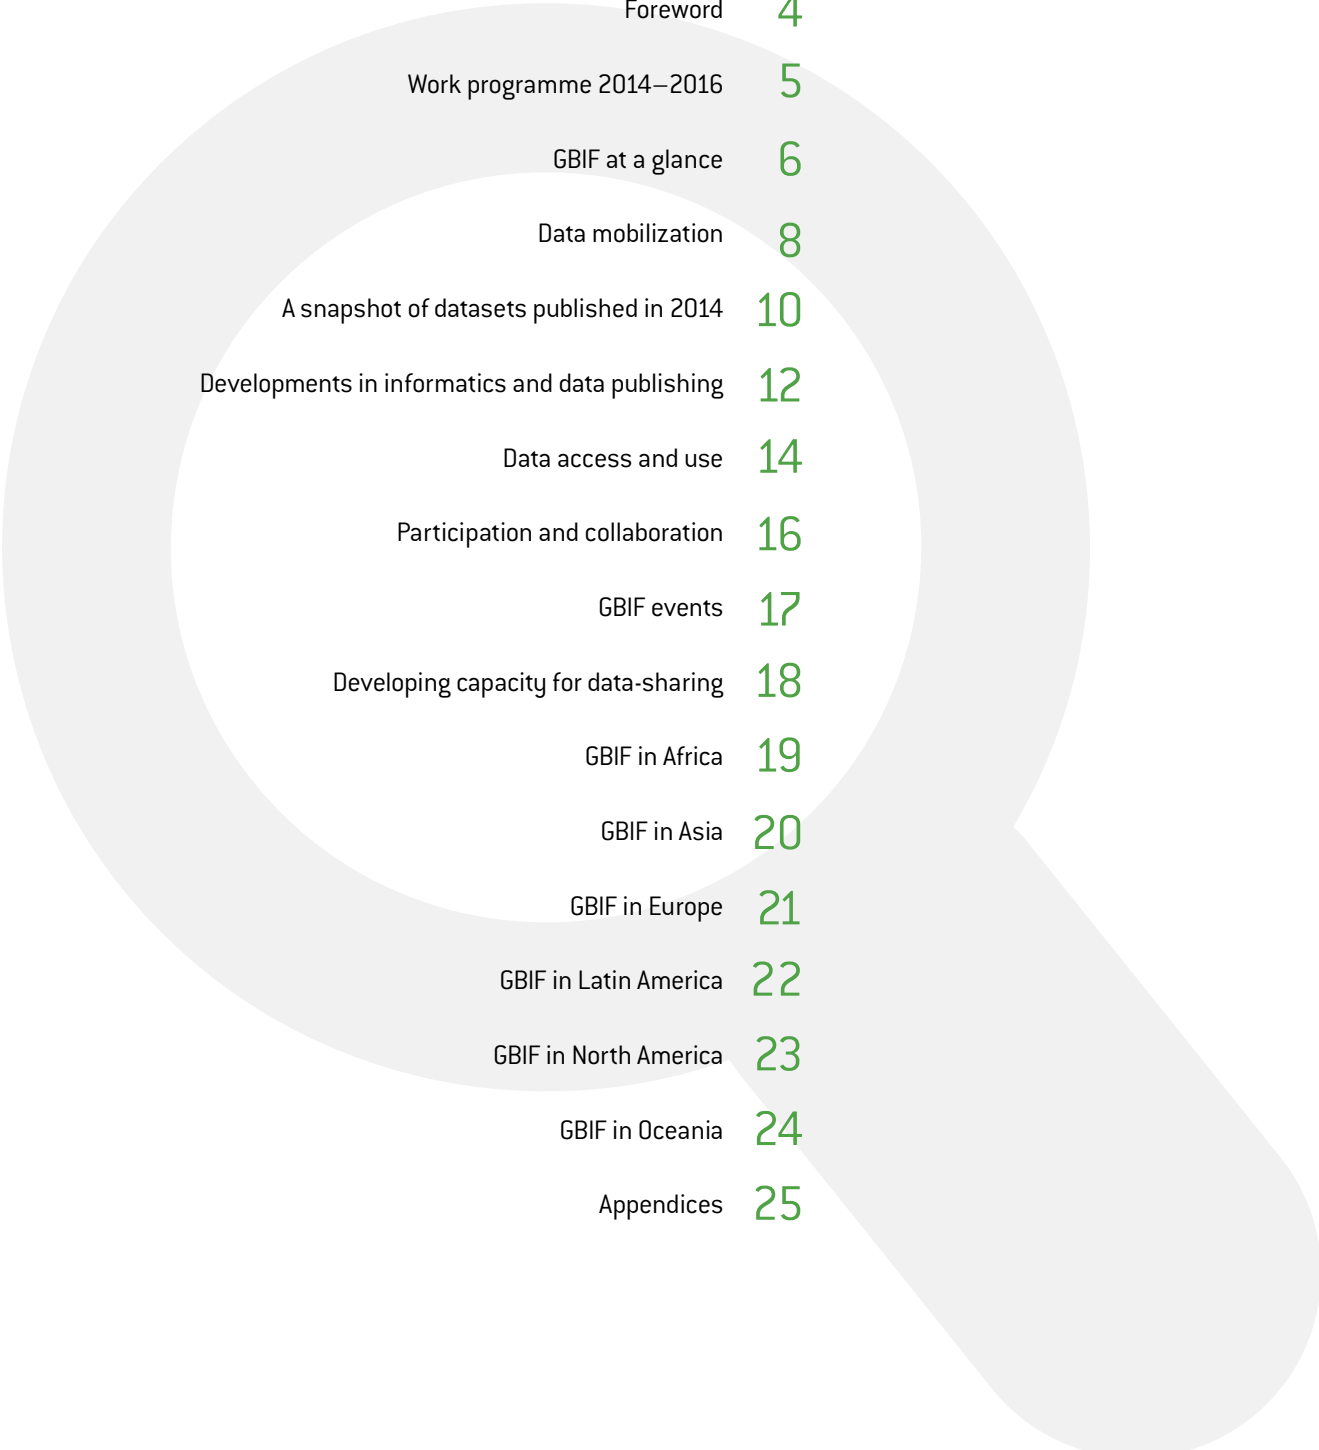

AGREEMENTS IN PLACE TO ENABLE BETTER CITATION AND PERSISTENCE OF DATASETS PUBLISHED THROUGH GBIF

357 PEER-REVIEWED RESEARCH ARTICLES CITE USE OF GBIF AS DATA SOURCE

Foreword

We have great pleasure in presenting the GBIF Annual Report for 2014. This year marked the start of a three-year work programme (2014-2016). Many of the activities started during the period covered by this report are still continuing, but this was a highly successful year for GBIF, with many important advances described in this document.

Significant improvements have been made to GBIF's technical infrastructure, bringing richer access to the wealth of data published throughout the network and benefitting data publishers and users alike with increasing support for standardized use and attribution. The volume of data in the network has passed a significant milestone of half a billion records and we have seen steady growth in the number of users accessing these data and acknowledging GBIF data within their publications.

These are excellent foundations for the remainder of this three-year work programme and for GBIF as it moves into its next phase of operation under a new strategic plan for 2017-2021. GBIF serves as the connection point between the many institutions and communities which collect or hold data on biodiversity, the researchers and policy-makers who depend on efficient access to these data, and global efforts to deliver open data infrastructures. Our focus in coming years is on improving the coverage, completeness and fitness-for-use of all data within the network and removing barriers to participation throughout the world.

During 2014, the GBIF Secretariat continued to restructure in response to staff turnover and to increase efficiency and responsiveness to the

Participants and other stakeholders. Some work programme activities were delayed as relevant staff positions were filled. With Siro Masinde recruited as Programme Officer for Content Mobilization and Dmitry Schigel as Programme Officer for Content Analysis and Use, we are confident that these areas will move forward rapidly during 2015. During 2014, the Secretariat also saw the arrivals of Kyle Copas as GBIF Science Writer and Marlene Dalsgaard Nielsen as Administrative Assistant.

The GBIF Executive Committee and Budget Committee have been working to develop a stable and achievable funding model to take GBIF into the years beyond 2016. Securing continuous funding for existing infrastructures is difficult and will depend on all our friends highlighting GBIF's successes and the continuing importance of our mission to national stakeholders. We hope that you will find this report useful in telling this story. GBIF continued to perform well in 2014, supported by an enthusiastic and dedicated community. We look forward to our progress in 2015.

Peter Schalk
Chair of the Governing Board

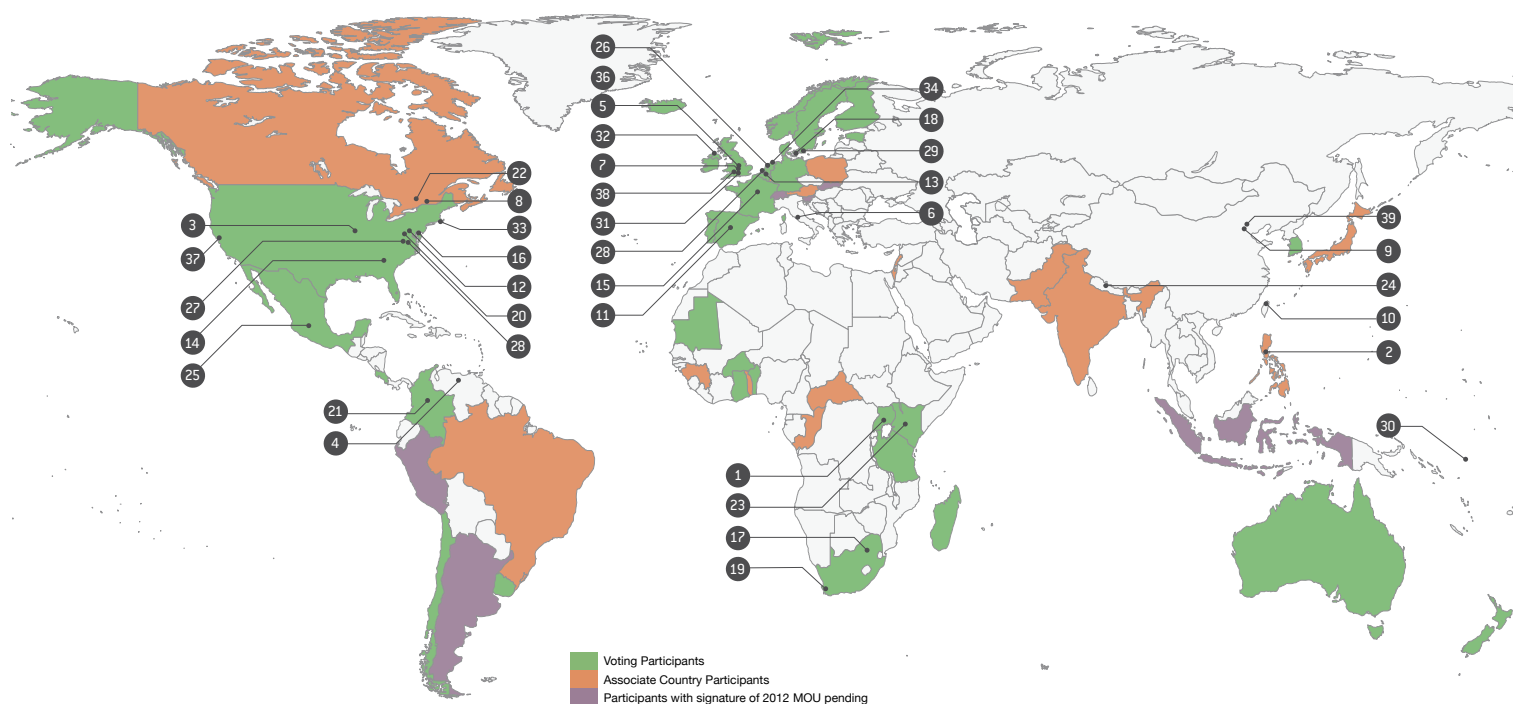

Donald Hobern
Executive Secretary

Work programme 2014-2016

A new, three-year work programme for the GBIF community was agreed during the 20th meeting of the Governing Board in Berlin in October 2013. This table summarizes progress towards key deliverables of this work programme during 2014.

Work streams	Key deliverables	2014 progress
Advance the informatics – persistence and validation	Stable operation of GBIF.org and services	Web service API stabilized; indexing of wider set of data elements for occurrence records.
	Stable identifiers for datasets and records	Version 2.1 of Integrated Publishing Toolkit (IPT) requires presence and uniqueness of stable identifiers.
	Tools to support data citation	Plan presented to Governing Board for implementation of Digital Object Identifiers (DOIs) for datasets and downloads for rollout in 2015.
	Clear machine-readable data licences and guidelines	Consultation on licensing options; decision from Governing Board to implement mandatory selection of one of three Creative Commons licences with recommendation to select most open licence possible.
	Repositories to improve long-term persistence	Memorandum of Cooperation with DataONE to implement pilot repository for datasets published through GBIF.
	Expanded model for data publisher endorsement	Consultation on new endorsement model; Governing Board decision to implement streamlined publisher endorsement and guidelines during 2015.
	Mobilization of sample-based datasets	Collaboration through EU BON to set up pilot repository for monitoring datasets; proposal to Biodiversity Information Standards (TDWG) of new terms to accommodate sampling events and species abundance.
Advance the engagement – communication and implementation	Communication strategy	Draft communication strategy identified key audiences and messages relevant to GBIF.
	Essential documentation	Review of key documents required by GBIF community; publication of new guides on data cleaning tools and managing camera trap data.
	National biodiversity information facilities	Draft revision of guide to establishing an effective GBIF node; implementation of data analytics on GBIF.org to track national progress on data mobilization.
	Capacity enhancement strategy	Consultation with nodes community on draft framework to guide GBIF capacity evaluation and enhancement; new integrated capacity enhancement support programme merges former mentoring and regional training support programmes.
Advance the content – relevance and fitness for use	Engagement of expert communities to form fitness-for-use working groups	Postponed to 2015 due to staff vacancies.
	Metrics and indicators to assess relevance of GBIF-mobilized data	Completeness of data coverage included in new analytics service on GBIF.org; creation of combined GBIF/TDWG data quality interest group.
	Identification of content mobilization priorities	Postponed to 2015 due to staff vacancies.
	Evaluation of models for creating and curating reference datasets within GBIF network	Dependent on 2015 implementation of DOIs and persistent repositories.
	Support for publishing metadata for undigitized natural history collections	Postponed to 2015 due to staff vacancies.

GBIF at a glance

Uruguay rejoined GBIF as Voting Participant (see pg 16) and Japan moved from Voting Participant to Associate Participant status in December 2014 (see pg 17).

Data mobilization

The figures on these pages provide a summary of the trends and breakdown of the biodiversity data shared by GBIF's registered institutions by the end of 2014.

Figure 5. The number of data records accessible through GBIF, from December 2007 to December 2014.

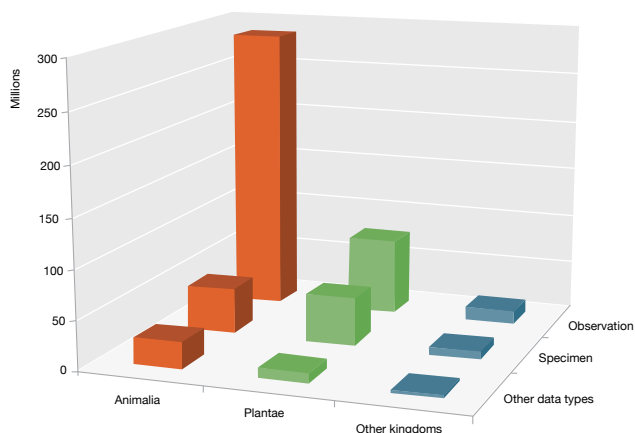

Figure 6. Primary biodiversity records by kingdom and record type, at end 2014.

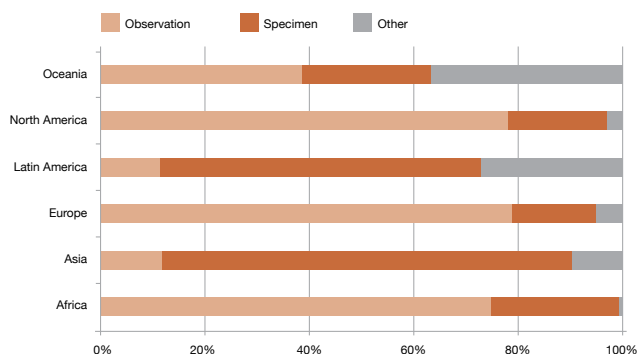

Figure 7. Occurrence records published by regional institutions by basis of record (observation, specimen, and other).

- The number of species occurrence records passed 500 million, with over 450 million of them georeferenced (Fig 5).
- Animal observations remain the largest category of data records, increasing by 69.6 million to 286 million between 2013 and 2014. More than 22 million plant records were added during the year (Fig 6).
- The proportion of records shared by North American institutions rose sharply, from 25% to over 40% during 2014. This was largely due to the update of the eBird Observational Dataset, managed by the Cornell Lab of Ornithology in the United States, which added more than 50 million records. The proportion of records of species originating in North America rose more modestly, from 34% to 37%, reflecting the fact that North American institutions share records of biodiversity from all over the world (Fig 9).
- In the country rankings for the number of published records, the eBird refresh also accounted for a sharp increase in records from the United States. Sweden, the United Kingdom and Australia remained in second, third and fourth place respectively. The Netherlands moved up from seventh to fifth position, while Germany moved up from tenth to seventh position (Fig 10).

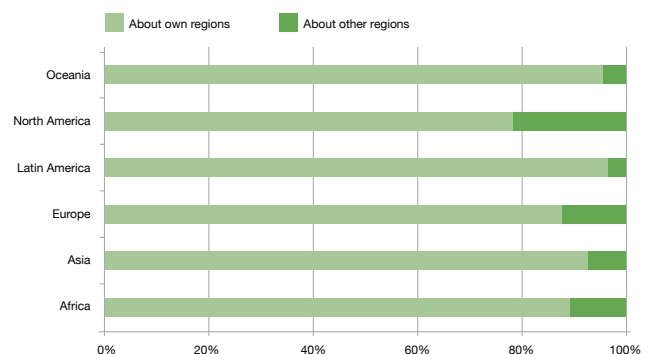

Figure 8. Data published from each GBIF region, with percentages relating to biodiversity within the region, and to biodiversity from outside the regions.

> Data records breakdown

Figure 9. GBIF-mediated occurrences by location of publishing institution and species occurrences. The comparable breakdown for 2013 is shown in the lower row of charts.

> Data breakdown by GBIF Participant

Indexed occurrence records (millions)

Figure 10. Number of records published on GBIF from participating countries and organizations, ranked by endorsing Participant node (top 25 shown). Note that the top four are shown on a different scale, followed by the next 10 and the last 11 on different scales. For a full list of data records published by GBIF Participants, see Appendix 1.

A snapshot of datasets published in 2014

Datasets shared in 2014 reflected the diversity of data sources contributing to GBIF.org – from museum specimens to citizens' observations, living collections of seeds and microorganisms, wildlife monitoring and tracking projects, and even fossils. Some examples are shown on these pages.

> CITIZEN OBSERVATIONS

Global

The [eBird Observational Dataset](#) (EOD)

Publisher: Cornell Lab of Ornithology

Total records: 153 million

Date range: 1810–2013

Run by the [Cornell Lab of Ornithology](#) and the [National Audubon Society](#), eBird is a vast collection of high-quality observations collected by professional ornithologists, recreational birders and citizen scientists alike.

More info at <http://www.gbif.org/page/6564>.

> MUSEUM AND HERBARIUM SPECIMENS

Republic of Korea

[Diplopoda](#) (Millipedes)

Publisher: National Science Museum of Korea

Total records: 5,549

A dataset containing [6,668 records of algae](#) and another with [2,500 records of zooplankton](#) were also among other data published by the museum.

Chinese Taipei

[Plant specimens at the National Taiwan University](#)

Publisher: Taiwan E-Learning and Digital Archives Program

Total records: 119,366

Date range: 1895–2012

Data are from the collections of the herbarium at the National Taiwan University, which holds representative specimens of about 95% of vascular plant species of Taiwan. Most of the collection of 260,000 specimens has been digitized.

Chinese Academy of Sciences

[Plants of Yunnan](#)

Publisher: Chinese Academy of Sciences

Total records: 163,199

Date range: 1992–2008

The Academy also published botanical datasets from five Chinese herbaria in [Lushan](#), [Wuhan](#), [Chengdu](#), [Guangxi](#), and [Jiangsu](#), adding more than 360,000 plant records and significantly increasing the geographic coverage of data from China.

Thailand

[Amphibians of Thailand](#)

Publisher: Princess Maha Chakri Sirindhorn Natural History Museum

Total records: 800

Date range: 2005–2013

This is the first dataset published by a Thai institution. 90% of the records contained in it relate to specimens collected from the Thai peninsula.

Belgium / Central Africa

[Endemic plants of the Congo Basin](#)

Publisher: Botanical Garden Meise

Total records: 24,121

Date range: 1955–2014

The Belgium Biodiversity Information Facility (BeBIF) worked with the publisher to publish this dataset of specimen records from Burundi, Rwanda and the Democratic Republic of Congo.

The Lulilaka river, Salonga National Park, Democratic Republic of Congo. By Radio Okapi. Licensed under CC-BY-2.0 via Wikimedia Commons.

Brazil

[Spiders of the order Araneae](#)

Publisher: Museu Paraense Emilio Goeldi

Total records: 22,683

Date range: 2006–2013

The museum, which specializes in the biodiversity of the Brazilian Amazon region, also published [25,000 records of Amazon fish specimens](#), [46,400 reptile records](#) and [20,000 records from its bird collection](#).

Chile

[Herpetological collection of the National Museum of Natural History](#)

Publisher: Ministry of Environment of Chile

Total records: 4,490

Date range: 1882 – 2010

Other data mobilized by GBIF Chile included collections of [flatworms](#) (*Platyhelminthes*), [crustaceans](#) and [algae](#) from Chile's National Museum of Natural History. These were among the first datasets from the country to be published via GBIF and were the result of a mentoring project with partners in Costa Rica.

> RECORDS EXTRACTED FROM LITERATURE

Belgium/UK

[Flora of Northumberland and Durham](#)

Publisher: Belgian Biodiversity Information Facility (BeBIF)

Total records: 5,583

Date range: 1797–1828

The observation records of plants and fungi in this dataset were derived from [The Flora of Northumberland and Durham](#) [N.J. Winch 1831]. The Botanic Garden Meise initiated the digitization of this historic literature reference by providing a semantically enhanced XML file, from which academic publishers Pensoft created an HTML re-publication.

Czech Republic – Iran

[Literary descriptions of Iranian lizards](#)

Publisher: National Museum in Prague

Total records: 8,525

This particular dataset is described by a [data paper](#) presenting a comprehensive summary of the distribution of the lizards of Iran. Because the Czech Republic is not a national Participant in GBIF, the [Consortium of European Taxonomic Facilities](#) (CETAF), a GBIF Associate Participant, endorsed the museum as a new publisher.

Apathya cappadocica urmiana. By Omid Mozaafari. Licensed under CC0 via Wikimedia Commons.

> LIVING COLLECTIONS

Germany

[Collection of myxobacteria](#)

Publisher: Leibniz Institute DSMZ - German Collection of Microorganisms and Cell Cultures

Total records: 13,937

The institute's collection comprises 7,000 strains of myxobacteria.

France

[National collection of *Solanum tuberosum*](#)

Publisher: Institut National de la Recherche Agronomique (INRA)

Total records: 99

The dataset relates to young potato plants maintained in test tubes by INRA or as field-produced tubers, and are available as genetic resource material. These specimens come from old cultivars of potato grown in France in the past. INRA also published records from national collections of other species including [barrel clover](#) (*Medicago truncatula*), [soft wheat](#) and [grape cultivars](#).

> FOSSILS

Czech Republic

Paleontological collection

Publisher: National Museum in Prague

Total records: 55,563

The museum published two datasets of over 55,000 species occurrences from the museum's paleontological collection of [fauna](#) and [flora](#).

> CHECKLISTS

Netherlands

[Taxa Watermanagement the Netherlands](#)

Publisher: Laboratory for Hydrobiological Analysis, Rijkswaterstaat

Total records: 13,349 species

This dataset, containing a list of species relevant to the management of Dutch inland water bodies, is regularly updated by specialists at the Rijkswaterstaat, the body responsible for public works and water management in the country.

> MONITORING / SURVEY DATA

Russia

[Plant distribution in the Meshchera National Park, Russia](#)

Publisher: Moscow University Herbarium

Total records: 22,625

This dataset is based on a grid scheme and contains records of unique occurrences of 812 species of vascular plants from the Meshchera National Park. Because Russia is not yet a GBIF national Participant, [GBIF Finland](#) (a Voting Participant) endorsed Moscow University Herbarium as a new data publisher.

> CAMERA TRAP DATA

India

[Tiger records from Rajaji National Park](#)

Publisher: Wildlife Institute of India

Total records: 306

Date range: 2008-2011

The publishing of this dataset was a result of a pilot project to demonstrate capacity building for the Intergovernmental Platform for Biodiversity and Ecosystem Services (IPBES). A [guide for publishing camera trap data](#) was also produced by the GBIF Secretariat, with Indian and Norwegian partners, as part of the project.

> AUDIO RECORDINGS

United States

[Sound recordings of animals, birds and insects](#)

Publisher: Museum of Biological Diversity, the Ohio State University

Total records: 44,770

Records in this dataset were gathered by the Borror Laboratory, which holds one of the largest animal sound archives in the world.

> TRACKING DATA

Belgium

[GPS tracking of gulls](#)

Publisher: Research Institute for Nature and Forest (INBO)

Total records: 1,181,274

The dataset contains occurrences recorded in 2013 and 2014 by 60 GPS trackers mounted on 44 lesser black-backed gulls (*Larus fuscus*) and 16 herring gulls (*Larus argentatus*) breeding on the Belgian coast.

> GENE SEQUENCE DATA

United Kingdom

[Geographically tagged genetic sequences](#)

Publisher: European Molecular Biology Laboratory

Total records: 4,661,554

This dataset of geographically tagged genetic sequences pilots the publication of genomic data through GBIF.

Developments in informatics and data publishing

Enhancements to GBIF.org

To serve users and enhance their ability to access data mediated by GBIF.org, the Secretariat responds to feedback and prioritizes ongoing improvements to the platform. Significant new features and refinements in 2014 included:

- Release of version 1 of the [GBIF API](#), which enables the use of GBIF-mediated data via web services by other online applications.
- **'Widened' occurrence records**, exposing more details provided by publishers in the species data shared through GBIF.org, including for example the type status of specimens, sampling methodology, collectors' names and field notes providing context for the collection or observation record.
- **Filtering and display of multimedia files**, allowing users to view images and play back audio and video files associated with occurrence records where they are provided by data publishers.
- **New 'data trends' visualizations** offering insight into both global and national trends in data mobilization, which could aid national partners in organizing their efforts and networks.
- Richer information about GBIF's national nodes added to the Participation section of each country page (see for example <http://www.gbif.org/country/BE/participation>)

Refinements in publishing

With nearly 650 institutions publishing their data through GBIF.org, the publishing community represents another sizeable audience served by the GBIF network. As with data users, the Secretariat maintains an ongoing programme of improvements that serve publishers' needs and activities. New features and refinements for 2014 include:

- The release of version 2.1 of the Integrated Publishing Toolkit (IPT) in April, with a number of enhancements including versioning of datasets, a development [detailed in PLOS ONE](#) in August, and an additional translation of the user interface into Japanese.
- **A new workflow to simplify publication of 'small data' associated with taxonomic research such as new species descriptions**, developed with Pensoft Publishers through its *Biodiversity Data Journal*, and also involving Encyclopedia of Life (EOL) and Plazi, an association supporting open access to data from taxonomic literature.

Two other developments during 2014 paved the way for future enhancements to the persistence and provenance of data.

- A **new partnership with the Data Observation Network for Earth (DataONE)** targeted data persistence by designing a pilot repository to archive datasets shared through GBIF.
- The GBIF Secretariat released a detailed plan for assigning Digital Object Identifiers (DOIs) to datasets, thus simplifying citation of biodiversity data and tracking of its use, with rollout scheduled for 2015.

>Data publishing protocols, by percentage of publishers

Figure 11. Use of data publishing protocols, by percentage of publishers. The number of publishers using the GBIF Integrated Publishing Toolkit (IPT) and the associated Darwin Core Archive (DwC-A) continued to increase in 2014, with three-quarters serving data to GBIF.org through the IPT.

Data licensing and endorsement

The GBIF Secretariat carried out two open consultations during 2014 on proposed changes to the [licensing conditions attached to data published through GBIF.org](#), and on the [process for adding new publishers to the GBIF network](#). After analysis of responses received from GBIF Participants, nodes, data publishers and the wider community, principles and next steps relating to licensing and publisher endorsement were approved at the 21st meeting of the GBIF Governing Board. The decisions will be implemented during 2015.

On [licensing](#), the Governing Board approved the proposal that all species occurrence datasets within the network be associated with digital licences equivalent to one of the following three choices supplied by Creative Commons:

- **CCO**, under which data are made available for any use without restriction or particular requirements on the part of users
- **CC-BY**, under which data are made available for any use provided that attribution is appropriately given for the sources of data used
- **CC-BY-NC**, under which data are made available for any use provided that attribution is appropriately given and provided the use is not for commercial purposes

The Governing Board agreed that GBIF should encourage publishers to adopt the most open licence possible in their situation.

On [endorsement](#), GBIF will retain the current requirement for new data publishers to be endorsed by a Participant country or organization. However, two significant enhancements will be introduced:

- The GBIF Secretariat, in consultation with the community, will draw up guidance and simple decision criteria, helping Participant nodes to evaluate potential new data publishers during the endorsement process.
- For cases in which a prospective data publisher is in a country not yet participating in GBIF, and has no connections with an existing Participant node, the Nodes Steering Group (NSG) will develop procedures for endorsement by the community following similar decision criteria.

New national portals

Above: The Netherlands Biodiversity Information Facility launched a [new portal in Dutch](#) to deliver news, events, an overview of biodiversity datasets published from the Netherlands to the GBIF network, a list of organizations and institutions in the country that manage biodiversity data, tools, and other information on publishing data online.

Above: GBIF Spain released its [new national biodiversity data portal](#) providing free access to more than 10 million biodiversity records from 69 Spanish institutions and projects as well as nearly another million records of biodiversity in Spain published by institutions abroad. The site builds on an open-source system originally developed by the Atlas of Living Australia (ALA).

Above: The GBIF national node for Brazil, SiBBR, launched a [new data and information portal](#), developed through a mentoring project, between SiBBR and its counterpart in Colombia, SiB Colombia. It included collaboration with Canadensys, a GBIF Associate Participant, which supported Brazil in re-using the tools behind its [data explorer](#) providing digital access to Canada's natural history collections.

Also in 2014, GBIF Benin worked closely with INBio (Costa Rica's national node) to create a new national portal that displays GBIF-mediated data.

Data access and use

Use of GBIF-mediated data in scientific research

The Secretariat maintains an ongoing programme of literature tracking that identifies research citations and uses of biodiversity data accessed through GBIF's global infrastructure.

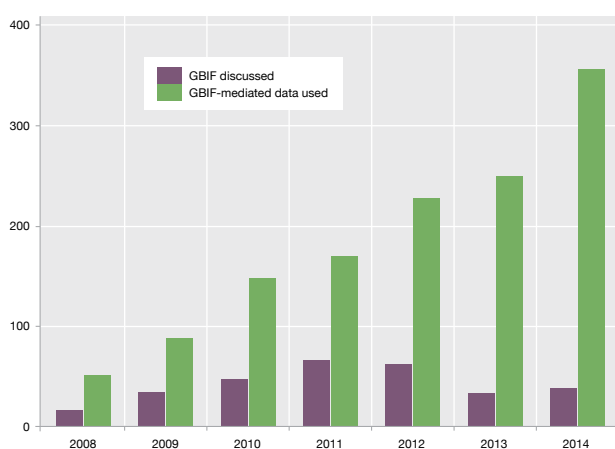

Figure 12. Annual totals of peer-reviewed publications citing GBIF as a source of data or discussing GBIF, 2008-2014

The examples on these pages briefly highlight a few key areas of investigation and research enhanced by free and open access to biodiversity data via GBIF. These include:

- 'Traditional' scientific applications that improve understanding about biology, ecology, conservation and protected areas
- High-priority policy issues such as invasive alien species
- Contributions that biodiversity data makes to setting human health priorities
- Potential impacts of climate change
- Demonstrations of the importance and relevance of biodiversity to human economy and livelihoods

Download the 2014 Science Review

<http://www.gbif.org/2014-science-review>

The 2014 *Science Review* compiles more than 350 scientific papers from peer-reviewed literature that apply data drawn from the GBIF network of Participants and publishers.

Figure 13. Number of peer-reviewed publications in 2014 citing use of GBIF-mediated data, ranked by country according to affiliation of authors. Top 16 countries shown.

Reducing invasive species risks through rapid watch lists

For many resource-poor nations, creating biosecurity schemes to prevent the introduction of potentially invasive alien species can be excessively complicated and expensive. South African researchers proposed a rapid, cost-effective method of creating invasive species watch lists based on three consistent predictors of invasion success: past precedents, environmental suitability and introduction effort. Using GBIF-mediated data on 419 invasive species combined with data from other sources, the authors demonstrate a quick, transparent and replicable technique for producing initial assessment of key invasive threats across taxa and at different national and provincial scales without substantial financial or scientific inputs.

Faulkner KT, Robertson MP, Rouget M *et al.* (2014) A simple, rapid methodology for developing invasive species watch lists. *Biological Conservation* 179: 25-32. doi:10.1016/j.biocon.2014.08.014.

Author country: South Africa

The wealth that built the Cornish town of Mevagissey derived from the success of small fishing boats that called its harbour home. By Loco Steve. Licensed under CC BY-SA 2.0 via Flickr.

Predicting climate impacts on the profitability of UK fisheries

With climate change expected to lead to large-scale shifts in the distribution of marine species, researchers applied a scenario-based approach to investigate the possible impacts on UK fisheries. GBIF and other global databases supplied the occurrence data for 31 fish and vertebrate species needed to build species distribution models, which are then linked in turn to cost-benefit analyses.

Despite predictions that a few species like European sea bass and sardines may increase, the results indicate future decreases in marine productivity, total catch value and weight and, thus, the fisheries' profitability. Whether these impacts derive directly from changes in species distribution or abundance or indirectly from altered operating costs, the authors recommend increased adaptive capacity and diversification as the most effective means of minimizing the anticipated reduction in profitability.

Jones MC, Dye SR, Pinnegar JK *et al.* (2014) Using scenarios to project the changing profitability of fisheries under climate change. *Fish and Fisheries*. doi:10.1111/faf.12081

Hammer-headed fruit bat (*Hypsignathus monstrosus*) with young. By Stephen C Smith. Licensed under CC BY-NC 2.0 via Flickr.

Mapping the niche of Ebola host animals

In 2014, as the Ebola virus disease took hold in West Africa—an outbreak that is both the largest ever recorded and the region's first—an international team of researchers sought to identify regions and countries at greatest risk from the epidemic. While uncertainty remains about the true reservoir of the virus, bats are suspected to play an important role in the life cycle of Ebola and other filoviruses. Relying on GBIF-mediated occurrence data, the researchers modelled the ranges of three species believed to be the most likely reservoirs for Ebola's transmission to humans: the hammer-headed bat (*Hypsignathus monstrosus*), little collared fruit bat (*Myonycteris torquata*) and Franquet's epauletted fruit bat (*Epomops franqueti*).

Combining these data with location data on previous zoonotic transmissions, the study identified at-risk areas across 22 countries in Central and West Africa with a combined human population of 22 million. The authors argue that these findings will help to prioritize surveillance for Ebola outbreaks and improve the diagnostic capacity in at-risk regions.

Pigott DM, Golding N, Mylne A *et al.* (2014) Mapping the zoonotic niche of Ebola virus disease in Africa. *eLife* 3:e04395. doi:10.7554/eLife.04395

Figure 15. 81,325 requests for downloads were received from users in 145 countries, islands and territories in 2014.

Participation and collaboration

The year saw significant strengthening of GBIF's collaboration with a number of partners during 2014.

Convention on Biological Biodiversity (CBD)

The GBIF Secretariat contributed to the [Fourth Global Biodiversity Outlook \(GB04\)](#), a mid-term review of progress towards the Aichi Biodiversity Targets incorporated in the Strategic Plan for Biodiversity 2011-2020. In particular, GB04 used mobilization of data through GBIF as an indicator of progress towards Target 19 on sharing of knowledge and data. Among the recommendations of GB04, launched at the 12th meeting of the Conference of Parties to the CBD (COP12) in Korea in October, was further mobilization of and access to primary biodiversity data.

Also at the COP12 meeting, GBIF helped launch the Global Invasive Alien Species Information Partnership (GIASIP) Gateway, a collaboration to bring together information from various sources to support decision makers in tackling the threat posed by invasive species in their countries.

Fourth Global Biodiversity Outlook (GB04)

Intergovernmental Platform on Biodiversity and Ecosystem Services (IPBES)

During the first year of the 2014-2018 IPBES Work Programme, GBIF established links with the Task Force on Knowledge and Data, which will advise the platform on the management of data and information resources in the various assessments to be carried out in the coming period. GBIF is assisting this group with information about developments that could help IPBES in identifying, accessing and archiving relevant data, and is among candidate strategic partners to support these functions of the platform.

In addition, GBIF completed a project with the [Wildlife Institute of India \(WII\)](#), the [Norwegian Institute of Nature Research \(NINA\)](#) and the [Norwegian Biodiversity Information Centre \(NBIC\)](#) to demonstrate the

potential for capacity building within IPBES to bring relevant data to support conservation policies. Among the products of this project were a [guide on best practices in publishing data from camera traps](#), and publication on GBIF.org of a [dataset of tiger records from camera trap images](#) captured in India's Rajaji National Park.

European Union Biodiversity Observation Network (EU BON)

GBIF continued its partnership within EU BON through a range of activities including development of a pilot repository for sample-based data through a prototype installation of the Integrated Publishing Toolkit (IPT), using a new extension to the Darwin Core standard submitted to Biodiversity Information Standards (TDWG) for ratification. The aim is to mobilize datasets from biodiversity monitoring projects using defined sampling protocols, including measures of species abundance.

New GBIF Participants and Affiliates

- [URUGUAY](#) rejoined GBIF as a full Voting Participant, establishing its node at the Museo Nacional de Historia Natural in Montevideo.
- [BIODIVERSITY HERITAGE LIBRARY \(BHL\)](#) joined as an Associate Participant. BHL is a consortium of biodiversity-related libraries that has digitized millions of pages of taxonomic literature.
- [CANADENSYS](#), based at the Université de Montreal, Canada, also joined as an Associate Participant. Canadensys hosts datasets from biodiversity collections across Canada, helping them to publish data through GBIF as well as on its own Canadensys Data Explorer. The group also collaborated with GBIF Brazil to support development of its national portal in November (see pg 13).
- [THE DATA OBSERVATION NETWORK FOR EARTH \(DataONE\)](#) signed a Memorandum of Cooperation with GBIF relating to ongoing work to support data persistence (see pg 12). The memorandum, which recognizes DataONE as a GBIF Affiliate, also supports the network's efforts to improve its own data indexing services by building on GBIF's solution for handling large-scale tabular data.
- [THE INTERGOVERNMENTAL OCEANOGRAPHIC COMMISSION \(IOC\)](#), of the United Nations Educational, Scientific and Cultural Organization (UNESCO) signed a Letter of Agreement with GBIF, focussed on improving exchange of marine data with the Oceanographic Biodiversity Information System (OBIS). Under this agreement IOC becomes a GBIF Affiliate, and GBIF an Associate Data Unit under the International Oceanographic Data and Information Exchange (IODE) programme.
- [NATURALIS BIODIVERSITY CENTRE](#), based in Leiden Netherlands, joined as an Associate Participant. Naturalis holds a collection of more than 37 million specimens and is already a significant data publisher through the GBIF network.

GBIF events

2014 GBIF Governing Board meeting

Indian Minister for Environment, Forests and Climate Change [Prakash Javadekar](#) opened the GBIF's Governing Board 21st meeting (GB21) in September, welcoming 89 delegates from 32 countries. In his address to the Governing Board, the minister reinforced India's commitment to developing a robust digital infrastructure for biodiversity data, and expressed the value to India of becoming a full Voting Participant in GBIF, moving from its current associate status.

Highlights of the week included:

- Approval of new approaches to licensing of datasets and endorsement of data publishers through GBIF (see pg 13).
- A message from the Executive Secretary of the Convention on Biological Diversity (CBD), Bráulio Dias, emphasizing the critical role that GBIF has played in improving the scientific knowledge needed in order to sustain healthy ecosystems.
- Discussion of some of the successes and challenges of setting up biodiversity information facilities, through a series of presentations followed by open discussion among GBIF Participant delegations and node managers.

At the meeting, Hanna Koivula from GBIF Finland was elected as the Chair of the Nodes Committee. Delegates also elected Leonard Krishtalka as the 1st Vice-Chair of the Budget Committee, Alex Asase as the 1st Vice-Chair of the Nodes Committee, Manuel Vargas as 2nd Vice-Chair of the Nodes Committee and Mark Costello as 1st Vice Chair of the Science Committee.

Japan announced that under current conditions, it was unable to pay the full contribution required to retain voting rights at the Governing Board, and would therefore change its status to Associate Participant. However, Japan agreed to pay €156,000 to a supplementary fund supporting GBIF-related activities in the Asia region.

GB21 provided the occasion for presenting the [2014 Ebbe Nielsen Prize to Tony Rees](#), whose groundbreaking informatics tools have significantly advanced the delivery of biodiversity data. The 2014 Young Researchers Awards (YRA) were also presented at GB21, recognizing the work of [Caoimhe Marshall, a Master's student at University College](#), Dublin, Ireland, helping to detect biases and identify gaps in biodiversity data and [Vijay Barve, an Indian PhD student](#) at the University of Kansas, United States, looking at the potential for social networking sites to provide valuable biodiversity data.

GBIF public symposium

A [public symposium held on 17 September](#), in association with the meeting of the GBIF Governing Board, highlighted examples of national-scale tools and services and shared insights from international researchers on key recent uses of GBIF-mediated data to support sustainable development.

- Staff from the Secretariat kicked off the symposium with presentations on recent developments in enriching data accessible through GBIF.org; in GBIF's capacity enhancement programme; and the network's contribution to global processes such as the CBD.
- GBIF national Participants from Ireland, Benin, the United Kingdom and Australia related examples showing how informatics investment and collaboration support national priorities on biodiversity.
- Tony Rees, winner of the 2014 Ebbe Nielsen Prize, presented an [overview of four innovative biodiversity informatics tools](#) he developed. Following a brief video update on 2013 YRA winner Emma Gomez on using GBIF to research nectar corridors for bats, attendees heard about 2014 Young Researcher Award recipients Caoimhe Marshall and Vijay Barve.
- The symposium concluded with experts from [Spain](#), the [United Kingdom](#), the [United States](#) and [India](#) presenting on their uses of data accessed through GBIF to support conservation, food security, public health, invasive species control, and human innovation.

Launch of the GBIF Ebbe Nielsen Challenge

With the aim of inspiring scientists, informaticians, data modellers, cartographers and other experts to develop innovative uses of open-access biodiversity data, GBIF launched the [GBIF Ebbe Nielsen Challenge](#) on 2 December.

Named after one of GBIF's principal founders, who tragically died just before the network came into being, the Challenge recasts the Ebbe Nielsen Prize as an incentive competition aimed at encouraging new advances in biodiversity informatics.

The [GBIF Ebbe Nielsen Challenge site](#) was created to take in submissions from participants. An expert jury will judge the initial entries and select three to six finalists to receive €1,000 each while competing for a €20,000 First Prize.

“I... appeal, not only to this forum but also within the CBD constituency, to recognize the benefits of a viable, active and strong GBIF, primarily to benefit countries in having access to information to guide their own sustainable development agenda.”

– Bráulio Dias, Executive Secretary of the CBD, in his message at GB22

Developing capacity for data-sharing

Capacity enhancement support programme

Building on its successful mentoring and regional training support programmes, GBIF initiated a new programme on capacity enhancement in 2014. The programme's integrated approach enables Participants to seek support for mentoring and regional training activities while combining these with support for developing documentation and for advocacy.

For 2014, GBIF awarded capacity enhancement grants to five projects, engaging 31 partners – 29 countries and two international organizations. The €40,000 investment from GBIF core funds in these projects is matched by €70,000 in co-funding from other sources.

The projects to receive support were:

- A Latin American initiative led by SiB Colombia to introduce systematic improvements to the quality of biodiversity data published through the GBIF network
- Another Latin American effort—headed by CYTED (The Iberoamerican Programme for Science and Technology for Development)—to expand capacity for digitizing and publishing data from scientific literature, images and multimedia
- Mentoring led by Mexico's CONABIO to increase the quality and interoperability of GBIF-mediated data through the use of the Plinian Core Standard for species information
- Bilingual training and exchange to establish coordinated early warning and response network for invasive alien species across sub-Saharan Africa, guided by GBIF Mauritania
- An intensive open-source 'hackathon' organized by Species 2000 targeted at enhancing the skills and capacity of GBIF's European Participants to produce national species checklists

The overall approach of the programme is explained in the GBIF [capacity enhancement framework](#), which was drafted during 2014.

Results of 2013 mentoring projects

Three projects, which received support in 2013 to build capacity for publishing and use of biodiversity information, ended in 2014.

Colombia-Brazil

The Information System for Brazilian Biodiversity (SiB Brazil), with support from SiB Colombia and Canadensys, developed and launched the national biodiversity portal in 2014 (see pg 13). Additionally, the development of scientific workflows has benefited both SiB Colombia and Brazil in providing analysis services. A tutorial on the Metacat repository for data and metadata helped both teams to improve their capacity in managing ecological data.

Belgium-Togo-Mauritania

GBIF Togo and GBIF Mauritania installed the Integrated Publishing Toolkit (IPT) and published a total of 12 occurrence datasets and checklists with information on algae, fungi, plants and animals in the two countries. The IPT installations are hosted by the French and Belgian nodes respectively.

Two workshops trained 36 scientists and data managers in using the GBIF portal and the IPT, and in cleaning datasets.

As a result of the mentoring programme, the Togolese node entered into discussions with the Ministry of Higher Education and Research on Togo becoming a Voting Participant of GBIF.

Spain-France-Portugal

GBIF Spain, France and Portugal benefited from each other's skills in a three-way mentoring programme. GBIF Spain shared their data quality workflow and tools for GBIF France and Portugal to run on new datasets. The node also demonstrated its use of e-learning tools and created two environments in the platform for use by the French and Portuguese nodes. GBIF Spain also trained the two nodes on publishing data papers using the GBIF IPT and shared its experience in implementing the Spanish national biodiversity data portal using the ALA code (see pg 13).

GBIF Portugal presented their use of the Google Refine tool to improve datasets, while GBIF France shared its statistics tools and its experience in crowdsourcing digitization of collections via the volunteer platform [Les Herbonautes](#). GBIF Portugal has translated the code into Portuguese for future implementation.

GBIF in Africa

GBIF nodes in the region developed a two-year work plan in 2014 to realize GBIF-Africa's vision, "A world in which Africa's biodiversity information is freely and universally available, in service to science, economy and the public good for a sustainable future in Africa". The first African Science Committee meeting was held to advise regional node managers on the strategic direction for the work plan.

Two workshops were organized in 2014 in the context of the JRS-funded regional project 'Mobilizing Africa's policy-relevant biodiversity data'. At the workshops, participants identified nine priority themes for mobilizing biodiversity data and training needs for key stakeholders.

>Events

GBIF Africa regional meeting

2-4 July 2014, Cotonou, Benin

Strategic meeting of the partners of the JRS project

'Mobilizing Africa's policy and decision-making relevant biodiversity data'

25-27 March 2014, Pretoria, South Africa

Workshop on data papers and data use

Belgium-Mauritania-Togo GBIF mentoring project 2013

18-19 June 2014, Lomé, Togo

Workshop on data publication and cleaning

Belgium-Mauritania-Togo GBIF mentoring project 2013

2-3 September 2014, Nouakchott, Mauritania

Figure 16. Data published by GBIF Participants in Africa by kingdom

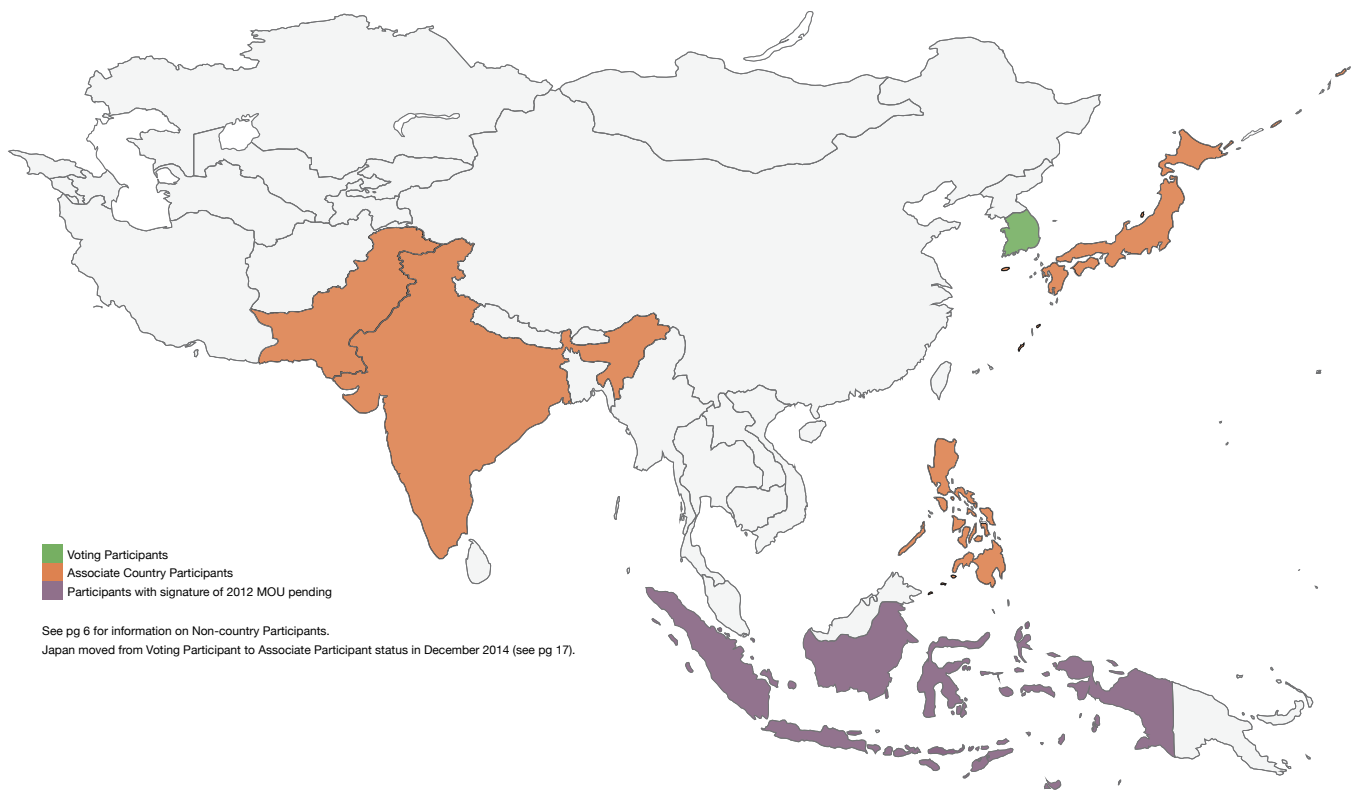

Figure 17. Trend in data relating to Africa

GBIF in Asia

Participant nodes in Asia identified collectively that there is a lack of biodiversity information about the region. To start to address this gap, nodes in the region have started collaborating for the mobilization of species checklists. The work to date has included a first assessment of Red list and invasive species checklists, and a scoping of checklists on freshwater and marine fishes and their endangered status.

An approach to contribute to improving the GBIF taxonomic backbone has been agreed upon.

>Events

GBIF regional meeting of Asian nodes

17-18 July 2014, Tsukuba, Japan

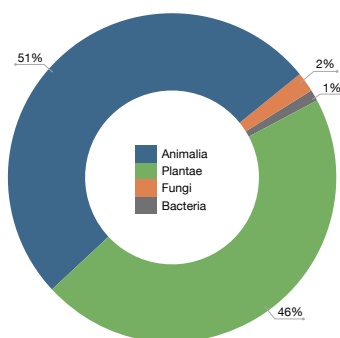

Figure 18. Data published by GBIF Participants in Asia by kingdom

Figure 19. Trend in data relating to Asia

GBIF in Europe

GBIF nodes in Europe identified mobilization of European forest and vegetation data as a priority to support the European Environment Agency. GBIF Belgium, Spain and Netherlands published data related to freshwater invasive alien species in 2014.

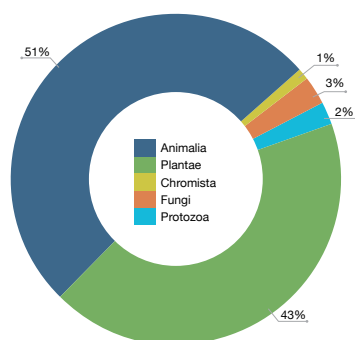

Figure 20. Data published by GBIF Participants in Europe by kingdom

>Events

6th GBIF European Nodes Meeting

8-10 April 2014, Brussels, Belgium

Symposium on the Digitization of Swedish Natural History Collections

9 Jan 2014, Stockholm, Sweden

1st workshop France-Portugal-Spain GBIF mentoring project 2013

21-23 January 2014, Madrid, Spain

V eLearning workshop on data quality in biodiversity databases

19 February – 5 March 2014, online

Organized by GBIF Spain

Course on biodiversity data quality, use, and publication by GBIF France and BioVeL

24-25 March 2014, Paris, France

2nd workshop France-Portugal-Spain GBIF mentoring project 2013

28-30 April 2014, Lisbon, Portugal

IV eLearning workshop on data digitization for natural history collection staff

7-21 May 2014, online. Organized by GBIF Spain

II eLearning georeferencing workshop using GEOLocate

8-29 October 2014, online. Organized by GBIF Spain.

Training course on the use of GPS and collecting species occurrence data

13-14 October 2014, Oslo, Norway

Organized by GBIF Norway for the [ForBio Research School in Biosystematics](#)

3rd workshop France-Portugal-Spain GBIF mentoring project 2013

14-16 October 2014, Paris, France

GBIF Information Day seminar series

1-19 December 2014, six cities in Portugal (Faro, Évora, Lisbon, Coimbra, Porto, Vila Real). Organized by GBIF Portugal

Training for Norwegian scientists on publishing data papers

2-3 December 2014, Oslo, Norway

Organized by GBIF Norway and the Belgium Biodiversity Information Facility

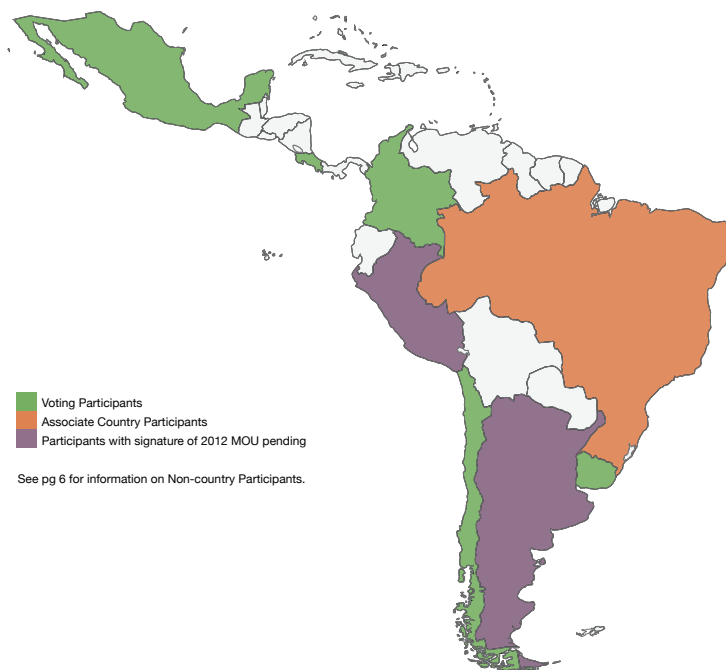

Figure 21. Trend in data relating to Europe

GBIF in Latin America

GBIF nodes in Latin America collaborated on a number of projects in the region, with support from the GBIF capacity enhancement programme, resulting in the development of the Brazilian national biodiversity portal and in improvements in data publishing and quality [see pg 18].

Additionally, nodes developed and submitted three project proposals for funding. Of these, the proposal to collaborate with the Atlas of Living Australia on developing national portals was funded.

>Events

4th GBIF Latin American Nodes Meeting

1-3 September 2014, Petrópolis, Brazil

3rd meeting Brazil-Colombia GBIF mentoring project 2013

10-14 February 2014, Bogotá, Colombia

13B Workshop: Foundations, evaluation and future of species distribution models

2-6 June 2014, Tepoztlán, Mexico

4th meeting Brazil-Colombia GBIF mentoring project 2013

25-29 September 2014, Petrópolis, Brazil

Bogotá data quality workshop

18-21 November 2014, Bogotá, Colombia

SiBBR launch event

24-25 November 2014, Brasília, Brazil

Figure 22. Data published by GBIF Participants in Latin America by kingdom

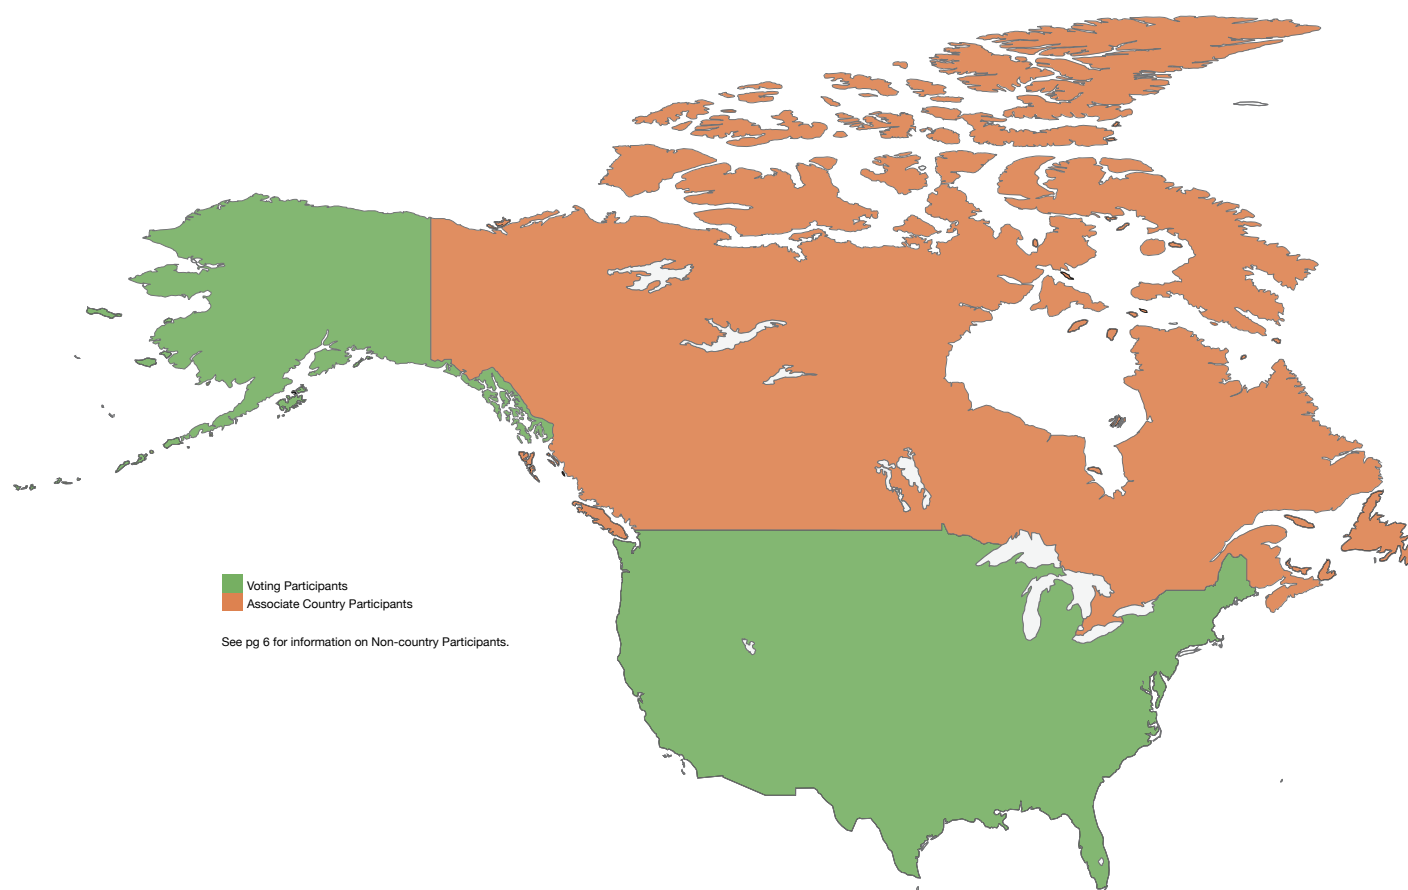

Figure 23. Trend in data relating to Latin America

GBIF in North America

Two regional projects have been identified for North America – investigating the potential of an invasive species project between USA and Canada, and inclusion of DNA barcoding data in GBIF and the linkage with specimen collection records.

>Events

GBIF regional meeting: North American nodes
21-22 July 2014, Guelph, Canada

Work Programme 2014:		
- Informatics, Stream 1	-102,348	-120,000
- Engagement, Stream 2	-128,354	-150,000
- Content, Stream 3	0	0
- Implementation	-1,490,768	-1,477,000
Governance - Committee costs and awards	-94,930	-125,000
Staff expenditure	-795,755	-754,000
Running expenditure	-158,760	-180,000
Secretariat facilities	-81,105	-80,000
Total expenditure	-2,852,019	-2,886,000
Financial income		
Changes in foreign exchanges rates	2,150	0
Interest	4,618	5,000
End of the year result	620,949	623,000
Balance sheet	2013 (EUR)	2014 (EUR)
Assets		
Other receivables and VAT	20,592	84,370
Cash and cash at bank	1,048,714	2,056,680
Total assets	1,069,306	2,141,050
Net capital and liabilities		
Net capital (equity)	30,994	654,444
Provisions	56,299	44,963
Supplementary funds	527,176	646,991
Prepayments re. 2015-2016	439,234	766,700
Other payables	15,603	27,952
Total equity and liabilities	1,069,306	2,141,050
GBIF Supplementary Fund		
Balance at 1 January	347,504	527,176
Exchange rate dif. at January 1	0	1,080
Income 2014	580,552	473,869
Expenditure	-400,879	-355,133
Balance at 31 December	527,176	646,991

>Externally Received Grants 2014

For supplementary funds	DKK	EUR
University of Copenhagen (IT Equipment) ¹⁾	170,000	22,834
I4Life	247,491	33,242
Eye on Earth	1,776,724	392,006
OpenUp	17,250	2,317
EU Bon	0	0
GIASIP, CBD	3,456	464
EMODnet Biology 2	44,572	5,987
VIBRANT	453,667	60,934
CBD - GBO4	205,387	27,587
Total external funding	2,918,547	545,371

¹⁾ University of Copenhagen in addition, annually provide in kind contributions, such as accountancy services, free office space incl. electricity, landline telephone/fax.

Appendix 4 continued...

>Contributing agencies for 2014

Voting Participants	Financial Contributors
Andorra	Institute d'estudis Andorrans
Argentina	CONICET - Consejo Nacional de Investigaciones Científicas y Técnicas
Australia	Atlas of Living Australia, CSIRO National Research Collections Australia
Belgium	Belgian Federal Science Policy Office (belspo)
Benin	Laboratoire des Science Forestieres
Chile	Comision Nacional del Medio Ambiente (CONAMA)
Colombia	Instituto de Investigación de Recursos Biológicos Alexander von Humboldt
Costa Rica	Asociación Instituto Nacional de Biodiversidad (INBio)
Denmark	The Danish Agency for Science, Technology and Innovation
Estonia	Ministry of Environment
Finland	Academy of Finland
France	Direction Générale pour la Recherche et l'Innovation (DGRI)
Germany	Deutsche Forschungsgemeinschaft (DFG) German Aerospace Center, BMBF
Ghana	Council for Scientific and Industrial Research (CSIR)
Iceland	Ministry for the Environment and Natural Resources
Ireland	National Parks & Wildlife Service
Kenya	National Museums of Kenya
Madagascar	Centre National de Recherches sur l'Environnement (CNRE)
Mauretania	L'Ecole Normale Supérieure de Nouakchott
Mexico	Consejo Nacional de Ciencia y Tecnología (CONACYT)
Netherlands	Ministry of Education, Culture and Science
New Zealand	Ministry of Business, Innovation and Employment
Norway	The Research Council of Norway
Portugal	Foundation for Science and Technology
Republic of Korea	Ministry of Education, Science and Technology
Slovak Republic	Ministry of the Environment
Slovenia	Ministry of Higher Education, Science and Technology
South Africa	Department of Science and Technology
Sweden	Swedish Research Council
Tanzania	Tanzania Commission for Science and Technology (COSTECH)
Uganda	Uganda National Council for Science and Technology
United Kingdom	Department for Environment, Food and Rural Affairs (DEFRA) Natural Environment Research Council (NERC) Royal Botanic Gardens, Kew Natural History Museum, London Joint Nature Conservation Committee
USA	National Science Foundation Smithsonian Institution U.S. Department of State U.S. Department of Agriculture

Appendix 5

>GBIF Governing Board and Standing Committees 2014

Executive Committee	
Chair	Peter Schalk
1st Vice Chair	Jorge Sóberon
2nd Vice Chair	Motomi Ito
3rd Vice Chair	Claude-Anne Gauthier
Committee Chairs	
Science	Roderic Page
Budget	Walter Berendsohn
Nodes	Stephen Wilkinson (until September 2014) Hanna Koivula (from September 2014)
Ex-officio	
Executive Secretary	Donald Hobern
Standing Committee	
Science Committee	
Chair	Roderic Page
Vice Chairs	Mark Costello Arturo Ariño Jean Cossi Ganglo
Members	Elizabeth Arnaud Guy Cochrane Kathy Willis
Ex-officio	
Chair Governing Board	Peter Schalk
1st Vice Chair Governing Board	Jorge Sóberon
2nd Vice Chair Governing Board	Motomi Ito
3rd Vice Chair Governing Board	Claude-Anne Gauthier
Executive Secretary	Donald Hobern
Budget Committee	
Chair	Walter Berendsohn
1st Vice Chair	Eli van der Heide (until September 2014) Leonard Krishtalka (from September 2014)
2nd Vice Chair	Selwyn Willoughby (until June 2014)
Members	Eric Chenin (from September 2014) Joanne Daly James Holborow (from October 2014) Patricia Koleff Ben Wheeler
Ex-officio	
Chair Governing Board	Peter Schalk
Executive Secretary	Donald Hobern
Node Managers Committee	
Chair	Stephen Wilkinson (until September 2014) Hanna Koivula (from September 2014)
1st Vice Chair	Alex Asase
2nd Vice Chair	Manuel Vargas
Members	All Node Managers
Nodes Steering Group	
Chair	Stephen Wilkinson (until September 2014) Hanna Koivula (from September 2014)
1st Vice Chair	Alex Asase
2nd Vice Chair	Manuel Vargas
Regional Node Representatives	
Africa	Hulda Gideon
Asia	Sheila Vergara (until July 2014) Tsuyoshi Hosoya (from July 2014)
Europe	André Heughebaert
Latin America	Luiz Gadelha
North America	Robert Hanner
Oceania	Pending

Appendix 6

>GBIF Affiliations

GBIF affiliations	Status
Biodiversity Indicators Partnership (BIP)	Partner
Biodiversity Knowledge Network for the European Union (KNEU)	Member, Dialogue group
Convention on Biological Diversity (CBD)	Observer
Convention on Migratory Species	Observer
Encyclopedia of Life (EOL)	Council
European Biodiversity Observation Network (EU BON)	Participant
Eye on Earth Biodiversity Special Initiative	Partner
Global Genome Biodiversity Network (GGBN)	Member, Steering committee
Global Invasive Alien Species Information Partnership (GIASIP)	Partner
Global Partnership for Plant Conservation (GPPC)	Partner
Group on Earth Observations (GEO)	Participant
Group on Earth Observations Biodiversity Observation Network (GEO-BON)	Member, Advisory Board
Intergovernmental Platform on Biodiversity & Ecosystem Services (IPBES)	Observer
IOC-UNESCO International Oceanographic Data and Information Exchange/ Ocean Biogeographic Information System (IODE/OBIS)	Associate data unit
LifeWatch	Member, Policy & Science Board

>GBIF-commissioned publications in 2014

- [Publishing sample data using the GBIF IPT](#), Jun 2014
- The GBIF Integrated Publishing Toolkit: facilitating the efficient publishing of biodiversity data on the Internet. PLoS ONE 9(8): e102623. doi:10.1371/journal.pone.0102623
- Draft for public review: GBIF communication strategy, Aug 2014
- Draft for consultation: [Establishing an effective GBIF Participant Node. Concepts and general considerations](#), Sept 2014
- [Publishing camera trap data, a best practice guide](#), Sept 2014
- [Data refinement using the BioVeL Portal](#), Oct 2014
- GBIF brochure, 2014 edition in French, Portuguese and Spanish
- Draft for public review: [GBIF Capacity Enhancement Framework](#), Dec 2014

Appendix 8

>GBIF Secretariat staff

GBIF Secretariat Staff as of December 2014	
Management group	
Donald Hobern	Executive Secretary/Director
Tim Hirsch	Deputy Director and Head of Participation
Anne Mette Nielsen	Head of Administration
Tim Robertson	Head of Informatics
Andrea Hahn	Programme Manager
Secretariat staff	
Sampreethi Aipaniguly	Communications Officer
Maheva Bagard Laursen	Communications Officer (maternity replacement, from 1 June)
Olaf Bánki	Senior Programme Officer for Participation
Kyle Braak	Developer
Søren Bundgaard-Jensen	Financial Officer
Andrei Cenja	System Administrator
Kyle Copas	Science Writer (from 12 May)
Marlene Dalsgaard Nielsen	Administrative Assistant (from 1 March)
Alberto González-Talaván	Senior Programme Officer for Training
Burke Chih-Jen Ko	Informatics Liaison
Jan Krzysztof Legind	Data Manager
Siro Masinde	Programme Officer for Content Mobilization (from 1 September)
Federico Mendez Hernandez	Developer
Oliver Meyn	Developer
Eamonn Ó Tuama	Senior Programme Officer for Interoperability
Mélanie Raymond	Senior Programme Officer for Node Development
Dmitry Schigel	Programme Officer for Content Analysis and Use (from 15 October)
Susanne Lønstrup Sheldon	HR Manager & PA to the Director
Ciprian Vizitiu	Webmaster and Network Administrator
Staff departures	
Vishwas Chavan	Senior Programme Officer for Data Mobilisation (until 30 June)
Samy Gaiji	Senior Programme Officer for Science and Scientific Liaison (until 6 February)

New staff at the GBIF Secretariat

Dmitry Schigel, Adjunct Professor of Mycology, University of Helsinki, Finland, joined as the new Programme Officer for Content Analysis and Use. Originally from Russia, Dmitry previously acted as taxonomy coordinator for the ICT team at the LUOMUS-Finnish Museum of Natural History, host of the GBIF national node for Finland, and ran research and education projects on dead wood, fungi and insects at the university's Metapopulation Research Group.

Kyle Copas started as the Secretariat's Science Writer, focused on creating content for GBIF.org and other communication platforms, as well as crafting and leading implementation of GBIF's communication strategy. Kyle contributes experience across the realms of biodiversity conservation and sustainability, having spent the past seven years in a variety of content, communications, and strategy roles at NatureServe, a U.S.-based Associate Participant in the GBIF network.

Maheva Bagard Laursen joined as Communications Officer, as maternity-leave replacement for Sampreethi Aipaniguly. Maheva has worked in communications, networking and project management in Europe and in China, most recently as an outreach communication consultant at the European Environment Agency (EEA).

Marlene Dalsgaard Nielsen joined the GBIF Secretariat as Administrative Assistant. Trained at the Ministry of Foreign Affairs in Copenhagen, Marlene worked at the Royal Danish Embassy and European Medicines Agency (EMA) in London, and most recently worked in Copenhagen for Novo Nordisk.

Siro Masinde, the new Programme Officer for Content Mobilization was previously senior research scientist and head of the botany department at the National Museums of Kenya, which includes the East African Herbarium and Nairobi Botanic Garden. Siro has extensive experience in digitization and databasing, including as African regional coordinator for JSTOR/ITHAKA, for which he helped develop the Global Plants Initiative.
