

Planning for the future

Andrew Rodrigues

Enabling GBIF to be truly Global in scope

Regional Strategic engagement

Through the Nodes Steering Group

Prioritisation of regional activities including

- Increasing regional participation
- Data mobilization
- Regional policy engagement
- Capacity building

Capacity Enhancement

BID – next steps

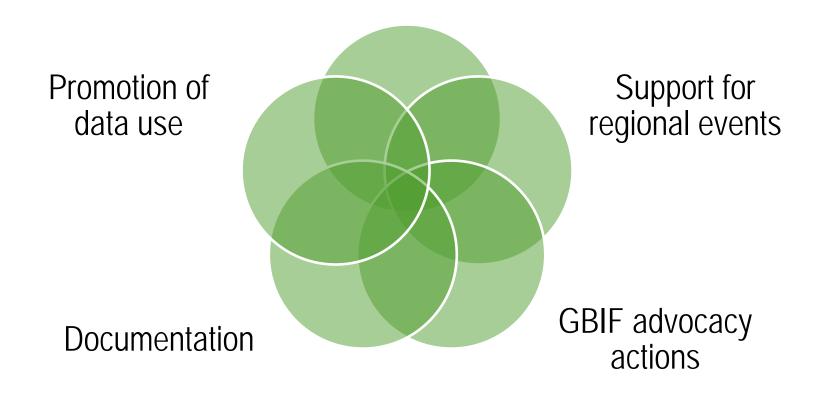

Regional Meetings Jun-Sep 2019 BID Closing meeting Nov 2019 New Call for Proposals Early 2020

Capacity enhancement workshops

GBIF capacity enhancement support programme

Mentoring activities

Five calls for proposals 2014-2018

55 full proposals

28 funded projects

Mentoring of Nigerian Biodiversity Information Facility

Workshops on usage of the Atlas of Living Australia (ALA) and GBIF.org data portals

Increasing capacities to develop National Species Checklists in the Latin America and the Caribbean Region

Mentoring of GBIF Togo

Training in participatory biodiversity monitoring: Building locally, connecting globally

Extending tools for improving biodiversity data quality to Spanishspeaking communities

Establishing a national node for Chile to enhance Latin America regional capacity

European Bireme: EU Nodes in biodiversity reporting mechanisms

Mentoring between GBIF Benin and GBIF France

Community of Practice - Skills Certification

Personal capacity badges:

SKILLS

BASIC & ADVANCED

PERFORMANCE LEVELS

	Minimal performance - 1	Basic performance - 2	Sufficient performance - 3	Outstanding performance - 4
A. Knowledge about BI data standards (DwC, DwC-A, GBIF EML profile)	Shows limited or no knowledge about which data standards are accepted by OBIF.	Knows the standards accepted by OBIF but does not know where to find information on how to use them. Cannot identify which terms are computery.	Knows the standards accepted by OBIP. Can find a tiss of the accepted data cores and advantance. Remembers the OBIP compulsory date & metadata terms and how to find the definitions of the terms.	Shows understanding about the sharacteriseis and limitations of the DwC-A and the star schema.
B, Capacity to analyze the suitability of a biodiversity dataset for publishing through GBIF.	Shoes limited or no knowledge of the formal inheria that a dataset needs to meet to be publishable through OBF.	Knows the formal otheria that a dataset reads to new to be publishable through GBF but cannot assess if a given dataset meets them.	Can connectly assess if a dataset can be sumerify published through OBF. Can assign a listed one wild data type (mone) to a dataset based on the dissimption provided by the data holder and after having analysed the dataset.	Can identify more than one publishing option for a dataset (where possible)
C. Knowledge about GBIF data publishing mechanisms.	Shows limited or no knowledge of the currently recommended data publishing mechanisms in OBIF.	Can list all the existing mechanisms but cannot assess which are suitable for which case.	Can list all the existing mechanisms and knows the applicability of the simple spreadsheet publishing tools and the IPT.	Knows all the mechanisms and their applicability, including the simple spreadsheet publishing tools, the IFT and the web tools to onsale outlonized DeC-A.
D. Capacity to analyze the formal quality of a dataset prior to publishing.	Only uses visual checks to analyze quality. Can detect missing values in required fields. Can detect evident, severe data inconsistancies.	Can only use very tasic techniques (e.g. sorting) to analyze data quality Can detect mismatches between field names and content.	Can use specific tools and techniques to assess quality. Recognises the minimum level of disaggregation needed for publishing. Can detect inconsistencies within a dataset. Can detect ada format invaniatives.	Uses a systematic approach to datase analysis overing all major data domains. Can detect incorrect data values cross-checking data and metadata.
E. Capacity to perform data transformation and correction.	Can only make changes manually in the tables. Sector describes the changes made.	Can use simple 'Find & replace' tools to fit blanks and automatically replace values. Doesn't describe changes made consistently.	Can use tools to automatically RE blanks, remove duplicates, check containts against checklists, split non-atomic values. Always remembers to describe changes made.	Can use advanced Mers and clusters to address data guality issues. Can identit outlines. Can accurately describe changes mad in a repeatable way.
F. IPT use: capacity to produce/analyze high quality metadata	Shows limited or no knowledge about the characteristics of good metadata.	Knows the characteristics of good metadata but has difficulties recognizing them.	Kinows the characteristics of good metadata and how to recognize them. Can produce recommendations on how to improve enoting metadata.	Kinows the characteristics of high-guality metadoata and how to produce them.
G. IPT use: capacity to upload/connect data and map it to existing cores & extensions.	Can upload single-file datasets into IPT but does not successed to map them to any core.	Can only upload single-file datasets into IPT and may to a single type of core with no extensions.	Knows how to produce suitable data files that fiscilitate convection of data. Can upload multiple files into an IPT as part of a single dataset and map them convectly to a conv and at fixed one eclemion. Can use the IPT data translation and constant value heatures.	Knows how to perform a SQL data connection in (PE. Can map a dataset to a core and multiple extensions.
H. IPT use: capacity to use the tool to register and publish datasets.	Can update an existing, published dataset by uploading a new source file.	Can go through the publishing process with a error-free dataset from an already registered publisher	Can successfully publish a simple dataset. Can understand and aut upon publishing error messages in sPT. Can register publishers using the QBDF org form.	Can understand and aid upon the IPT publishing log. Shows understanding of dataset versioning in IPT.

GBIF VOLUNTEER MENTORS – EXPANDING BEYOND THE BID PROGRAMME

Volunteer Mentor: This badge is assigned to those who have volunteered to be part of the pool of mentors available to provide support to the GBIF funded projects and who have completed the webinar.

Project Mentor: This badge is awarded to those who have been assigned to mentor one or more GBIF funded projects, and have provided substantial remote or on-site support to their implementation.

Certified Trainer: This badge is awarded to those who have contributed to the development and delivery of capacity enhancement workshops.

LOWERING THE TECHNICAL THRESHOLD

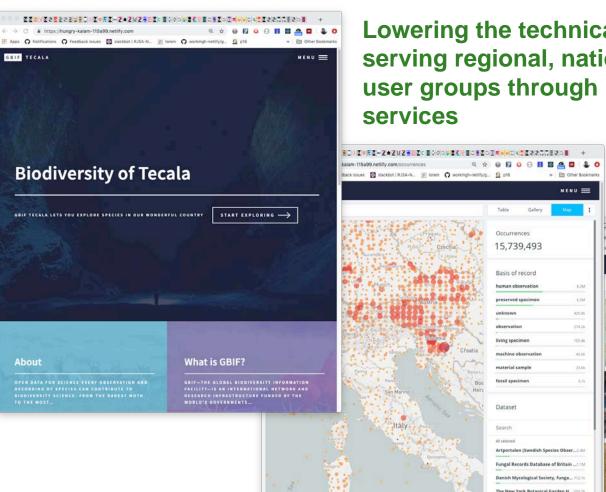

Lowering the technical threshold for data mobilization through hosted IPTs and community-based technical helpdesk support

BID IPT hosts 87 resources from project teams in the ACP regions

Secretariat hosted IPts

Lowering the technical threshold for serving regional, national and thematic user groups through hosted portal services

BIODIVERSITY OPEN DATA AMBASSADORS

Community of volunteer biodiversity professionals to promote principles and best practices of open data sharing and use

- Data advocacy
- Conference presentations
- Best practice
- Data publishing, use and citation
- Presentation support from GBIF

Biodiversity Open Data Ambassadors A orfs of profitzionali advecting bot practices in open sharing and transparent son of tradiversity data

Trumpeter awars (Cyprus Executor), migrating south over Alberta, Canada. Phoso by karrin via Naturalist research-grade observations, formed under CO BY-NO 4.0.

The success of GBF depends in part on establishing a good understanding within research and policy communities of the benefits and opportunities provided by free and open access to biodiversity data, as well as the importance of responsible use of such data through proper citation and attribution.

The GBIF Secretariat and GBIF participant nodes work to promote this understanding through their communication platforms, at meetings and across networks around of the world. However, this relatively small group can never hope to reach all relevant communities without assistance.

Biodiversity Open Data Ambassadors can fill that gap. If you are a biodiversity professional who promotes the principles and best practices of open data sharing and use, we can equip you with information resources, networking opportunities and recognition to make you an even more effective advocate in you or wn professional communities.

Regional Statement

Data is the currency of the information age, and biodiversity data must provide the foundation for evidence-based decision-making in the conservation and management of natural resources. However, critical data deficits impair decision-making and in order to achieve sustainable development, we require relevant reliable biodiversity information as well as tailored products and services to be made available to researchers, natural resource managers and policymakers in consumable forms. We can only achieve this through regional cooperation that can spur coordinated action to pool resources, share expertise and enhance capacity.

We the participants of the BID Caribbean regional meeting, held in University of West Indies, St. Augustine, Trinidad from 25 to 28 June 2019, agree that the BID programme has, to date, made significant achievements in the region to mobilize and use data within decision-making and build capacity for the mobilization and use of data to ensure the long-term sustainability of activities. However, regionally, there is still an urgent need to:

[Bullet point list to be agreed upon in the plenary session on day 2 using the below prompts.]

[Data Mobilisation]

[Data Use]

[Capacity Enhancement]

[Sustainability]

We hereby declare our commitment to supporting existing and future activities that address these needs and ensure that biodiversity information contributes fully to sustainable development in the Caribbean.

Data Mobilisation - Summary

Main Outcomes

Acknowledged the benefits of access to the GBIF infrastructure for publishing valuable open access, standardised, conservation-relevant datasets on the Pacific by Pacific-based organisation and strengthened regional and global collaboration and increasing regional awareness and engagement in data publishing.

Data Mobilisation - Priorities

- Engaging with new and ongoing data collecting activities in the region eg researchers, rangers, community conservation, BIOWRAPS
- Increasing the range and relevance of data published through GBIF eg non-invasive species, collections, key regional and legacy datasets, local knowledge, new data holders eg fisheries and forestry
- Advocating the benefits of sharing data at a national and regional level "contribution anxiety"
- Aligning data mobilisation efforts with national and regional policies

Dr. Randolph R. Thaman The University of the South Pacific FIJI

Data Mobilisation - Priorities

- Engaging with new and ongoing data collecting activities in the region eg researchers, rangers, community conservation, BIOWRAPS
- Increasing the range and relevance of data published through GBIF eg non-invasive species, collections, key regional and legacy datasets, local knowledge, new data holders eg fisheries and forestry
- Advocating the benefits of sharing data at a national and regional level "contribution anxiety"
- Aligning data mobilisation efforts with national and regional policies

In your opinion, what would be some of the key activities that you would need to undertake to achieve desired objectives?

What do you see as being some of the key challenges in successfully undertaking those activities?

Data Use - Priorities

Researchers

- Increase trust in the quality of data
- Advocating the benefits of sharing data at a national and regional level
- Incorporate GBIF within secondary and tertiary curricula
- Lack of long term, vocational opportunities for researchers

Data Use - Priorities

Policy makers

Increasing awareness of GBIF to decision makers Increasing awareness of the different levels of decision-making – practitioners vs policy makers Integration of GBIF with regional data management platforms and science-policy organisations Facilitating access to data for decision-makers eq through search, analysis and interpretation

Filimone Kata Lapao'o Ministry of Meteorology, Energy, Information, Disaster Management, Environment, Climate **Change and Communications** (MEIDECC) TONGA

Data Use - Priorities

Increasing awareness of GBIF to decision makers Increasing awareness of the different levels of decision-making – practitioners vs policy makers Integration of GBIF with regional data management platforms and science-policy organisations Facilitating access to data for decision-makers eq through search, analysis and interpretation

In your opinion, what would be some of the key activities that you would need to undertake to achieve desired objectives?

What do you see as being some of the key challenges in successfully undertaking those activities?

Capacity Enhancement - Priorities

- Ongoing skills development
- Training in key technical skills R, GIS, georeferencing, data standard terms and the links between them
- Project planning and data management
- Application of standards across projects and research
- Communication
- Node management

Ainsof So'o Secretariat of the Pacific Regional **Environment Programme** (SPREP) SAMOA

Capacity Enhancement - Priorities

- Ongoing skills development
- Training in key technical skills R, GIS, georeferencing, data standard terms and the links between them
- Project planning and data management
- Application of standards across projects and research
- Communication
- Node management

In your opinion, what would be some of the key activities that you would need to undertake to achieve desired objectives?

What do you see as being some of the key challenges in successfully undertaking those activities?

Sustainability- Priorities

Securing long-term human resources and funding dedicated to working with GBIF

Working with competing/complementary initiatives e.g. BIOPAMA, GEF6, PROTEGE, INFORM, Living Atlas community

Address sensitive data concerns
