

ASEAN Centre for Biodiversity

Kit Elloran
Database Specialist
Biodiversity Information Management

GBIF

Global Biodiversity
Information Facility

Who we are?

ACB is an intergovernmental regional centre established to facilitate regional and global cooperation on the conservation and sustainable use of biodiversity.

Scientific Oversight from the

- ASEAN Working Group on Nature Conservation and Biodiversity
- The Governing Board
- ASEAN Working Group on Coastal and Marine Ecosystems

ACB is hosted by the Government of the Philippines.

ASEAN Centre for Biodiversity

Hosted by the
Government of
the Philippines

Reports to 3 ASEAN Working
Groups – Nature
Conservation and
Biodiversity; Climate
Change; and Wildlife
Enforcement Network

Overseen by a Governing
Board comprising of
Senior Environment
Officials of the ten AMS

HQ- Forestry Campus,
University of the
Philippines, Los Baños,
Laguna, Philippines

Established in 2005
through an Establishment
Agreement signed by 10
ASEAN Member States
(AMS)

Thematic concerns

Access and Benefit Sharing

Biodiversity Information Management

Ecotourism, Business and Biodiversity

Climate Change and Biodiversity

Taxonomy and Invasive Alien Species

Species Conservation and Wildlife Law Enforcement

The Economics of Ecosystems and Biodiversity

Public Awareness

Geographic concerns

ASEAN Heritage Parks and Protected Area Management

Coastal and Marine Biodiversity

Wetlands and Peatlands

Transboundary Protected Areas

Agriculture Biodiversity

Urban Biodiversity

ACB-BIM Mandate

Overall ACB Mandate:

Facilitate cooperation and coordination among the AMS, and with relevant national governments, regional and international organizations, on the conservation and sustainable use of biological diversity and the fair and equitable sharing of benefits arising from their use

Mandate of the Biodiversity Information Management unit:

Provide technical assistance to AMS to meet their reporting requirements to CBD and establishment and maintenance of National Clearing-House Mechanisms (CHMs)

Data mobilization plans and progress

- **Assemble and curate data** and information on biodiversity in the ASEAN region
- **Develop geographic mapping and analytical tools** to support knowledge generation and management
- **Provide scientific inputs** to conservation management initiatives and key programs and projects of ACB
- **Provide science-based information** for the development of regional initiatives and conservation policies.
- **Maintain the technical platforms** of ACB such as the Regional CHM and the ASEAN Biodiversity Dashboard
- **Support the development of project** websites and maintain databases: AHP, e-library, policies, Friends of Biodiversity, good practices, etc.

Data mobilization plans and progress

- **Analyse** biodiversity-related data and information,
- **Develop regional syntheses and organise** the ASEAN Biodiversity Outlook publication to support science-based policy-making on biodiversity conservation.
- **Ensure that the science and research outputs**, as well as the knowledge products produced by the ACB are reviewed and validated by the ACB Scientific Advisory Committee (ACB SAC).
- **Coordinate the conduct of ACB SAC-related activities** and provide support to the ACB SAC members in fulfilling their functions

Keywords

The data in this occurrence resource has been published as a Darwin Core Archive (DwC-A), which is a standardized format for sharing biodiversity data as a set of one or more data tables. The core data table contains 3,331 records.

This IPT archives the data and thus serves as the data repository. The data and resource metadata are available for download in the [downloads](#) section. The [versions](#) table lists other versions of the resource that have been made publicly available and allows tracking changes made to the resource over time.

OCURRENCE

Fungi of Mt. Makiling from the Mycological Herbarium of the UPLB Museum of Natural History

Latest version published on 14 April 2022
This resource has not been registered with GBIF

This dataset includes selected records of fungi from the Mt. Makiling forest reserve area in Laguna Province. The collections include mostly historical records from existing catalog with the oldest collection from 1905. All recorded specimens were deposited to the UPLB Museum of Natural History Mycology, however we have not updated the collection if all specimens listed here are currently present in our facility.

GBIF Registration

The data in this occurrence resource has been published as a Darwin Core Archive (DwC-A), which is a standardized format for sharing biodiversity data as a set of one or more data tables. The core data table contains 1,041 records.

This IPT archives the data and thus serves as the data repository. The data and resource metadata are available for download in the [downloads](#) section. The [versions](#) table lists other versions of the resource that have been made publicly available and allows tracking changes made to the resource over time.

Engaging with data users

ASEAN Biodiversity Dashboard

The **ASEAN Biodiversity Dashboard** feature several biodiversity data categories selected based on data availability and relevance to conservation work in the ASEAN Region.

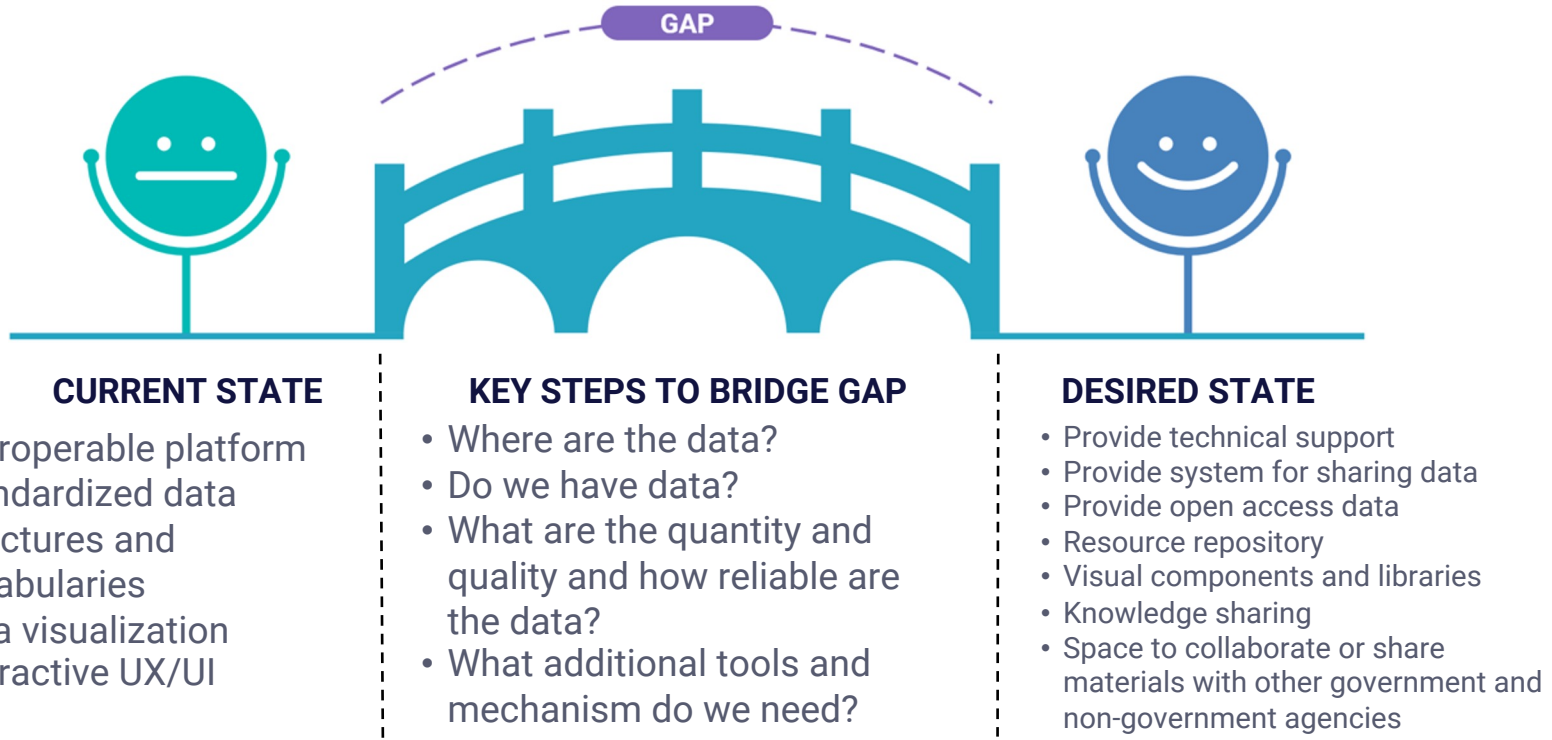

- Species occurrences and distributions
- Flyway Networks
- Zoonosis Outbreaks
- Habitat Building Species in the marine environment
- Protected Areas and Heritage Parks and
- Information on Intact Forest Landscapes

Challenges and priority actions

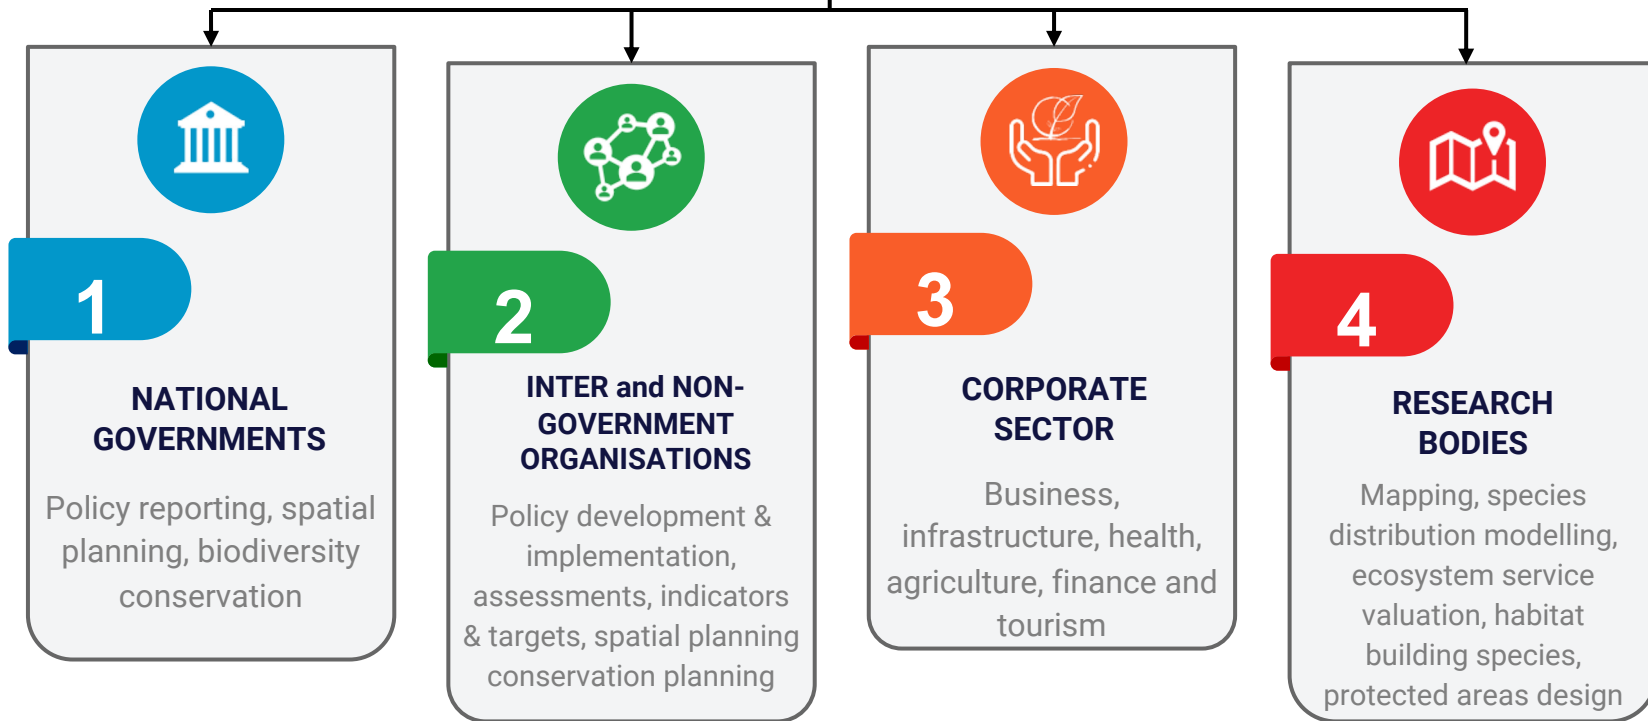

Understanding the gaps

Engagement with regional initiatives

Local, national, regional and global scale biodiversity data are needed by

Challenges and priority actions

Challenges

- 1.Delay in data availability
- 2.New data types, technologies
- 3.Taxonomic, temporal and geographical gaps
- 4.Multi-partnership engagements
- 5.Various clients, different interests

Actions

- 1.Continue updating the ASEAN Biodiversity Data
- 2.Provide technical support to AMS
- 3.Utilize available online tools (IPT)
- 4.Provide standard data structure (DarwinCore)

Strengths

1. Technical support

Capacity to provide technical support and equipment in hosting datasets

2. Data management

Provide support in managing biodiversity Data following the DWC format

3. Capacity building

ACB provides technical training to ASEAN Members in mobilizing biodiversity data.

4. Data hosting

ACB provides an IPT hosting that is managed regularly in our new dedicated server

DATA

SORTED

ARRANGED

PRESENTED VISUALLY

EXPLAINED WITH A STORY

Priority needs at the regional level

1. “To substantially strengthen the effectiveness of international governance for biodiversity and ecosystem services”
1. “Strengthening the capacity to mobilize and use biodiversity data, information and forecasts so that they are readily accessible to policymakers, managers, experts and other users”

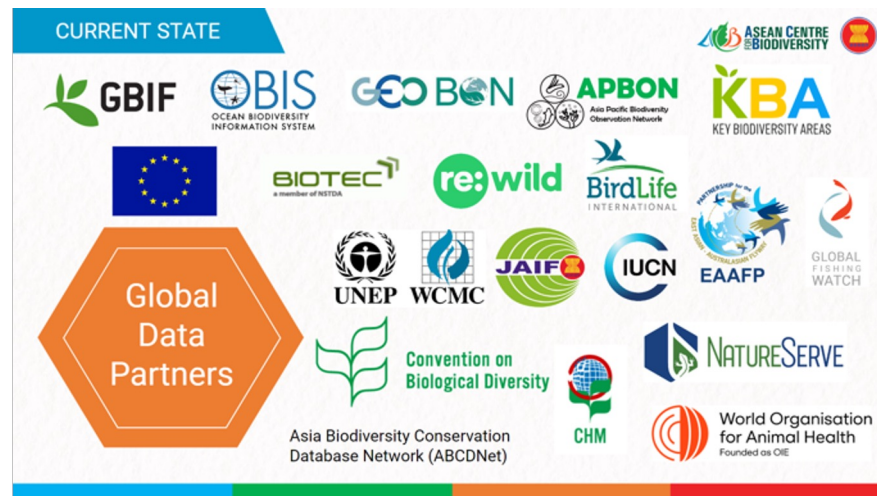

Priority needs at the regional level

3. Provide the best available material (data, indicators, models)

made available by a key institutions (e.g. GBIF, OBIS, APBON, UNEP-WCMC, Natureserve, and others) which can serve for establishing baselines for research and reporting;

4. Provide free analytical tools

to support the discovery, access, exchange and execution of web services (databases and modelling) designed to generate the best available material but also for research purposes, decision making and capacity building activities for conservation;

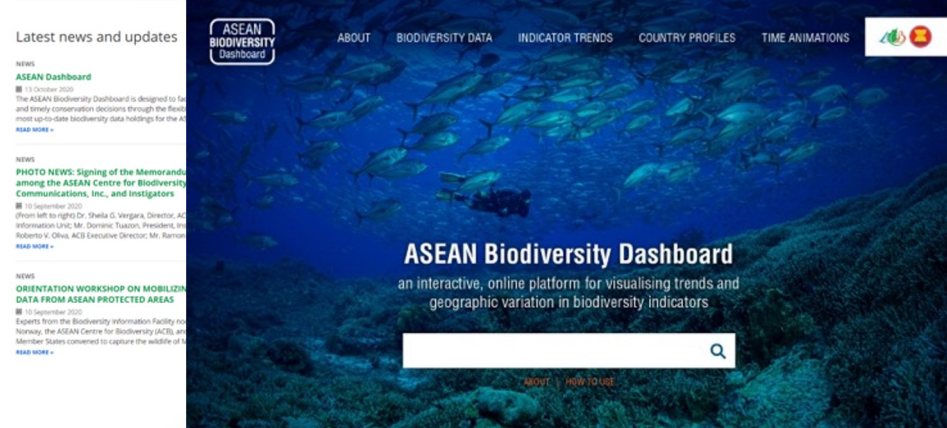

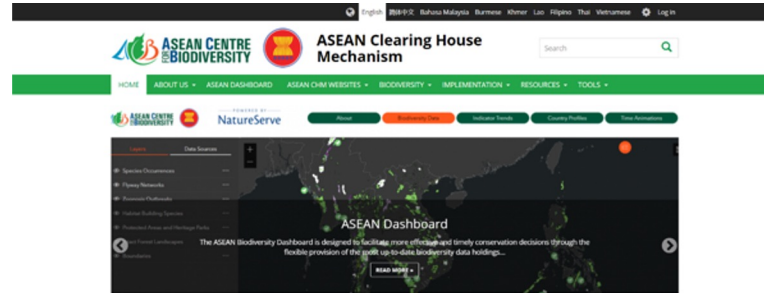

5. Provide an interoperable and, as far as possible, open source framework

to provide institutions with their own means to assess, monitor and forecast the state of, and pressures on protected areas, and to help these institutions to further engage with the organizations hosting critical biodiversity informatics infrastructures.

“

The way forward is to establish a network of alliances in Asia and agree in a single interoperable infrastructure, share common goals and provide an open access technology in biodiversity data sharing following the FAIR principle with the involvement of policy maker, corporate sector, conservationists, and the general public.”
