connect [Home](#) [About Connect](#) [News and Documents](#)

Connect - mainstreaming biodiversity information into the heart of government decision making

Biodiversity and ecosystem services are essential components of a healthy economy, relevant across all sectors of society. However, the continued loss of the world's biodiversity is having significant consequences across a range of sectors including poverty reduction and development.

In order to achieve truly sustainable development, **governments must integrate biodiversity and ecosystems services information** into their decision making processes.

Connect will work with the governments of **Ghana, Mozambique and Uganda** to provide a showcase of how biodiversity information can be made more credible, salient and legitimate for decision-makers.

GEF project grant:
USD \$5,000,000

Le programme Sud Expert Plantes Développement Durable...

... s'attache à renforcer les interactions et les partenariats en matière de biodiversité végétale entre recherche, enseignement et demandes de la société, à travers le soutien à :

- des projets de recherches dont le but est de renforcer la connaissance et la valorisation de la biodiversité végétale,
- des initiatives de partenariats public-privé,
- des projets de valorisation des collections botaniques,
- des actions de formation professionnelle,
- l'implication des scientifiques des pays du Sud dans le conseil aux instances nationales et internationales.

SEP2D fait suite à un précédent programme, Sud Expert Plantes (SEP), actif de 2006 à 2012, dont le site internet reste consultable : <http://www.sud-expert-plantes.ird.fr>

What we (don't) know about global plant diversity ↗

Literature

Cornwell, W. Pearse, W. Dalrymple, R. Zanne, A. (2019) *Ecography*

The era of big biodiversity data has led to rapid, exciting advances in the theoretical and applied biological, ecological and conservation sciences. While large genetic, geographic and trait databases are available, these are neither complete nor random samples of the globe. Gaps and biases in thes...

Bias • functional trait • genetic • knowledge gaps • macro-ecology • spatial

A global test of ecoregions ↗

Literature

Smith, J. Letten, A. Ke, P. Anderson, C. Hendershot, J. Dhami, M. ... - (2018) *Nature Ecology & Evolution*

A foundational paradigm in biological and Earth sciences is that our planet is divided into distinct ecoregions and biomes demarking unique assemblages of species. This notion has profoundly influenced scientific research and environmental policy. Given recent advances in technology and data availab...

Continue to align calls for proposals, workshops, and projects with (new) partners in our next phase of BID

Provide expertise, training materials and mentoring support on the management, publishing and use of open biodiversity data to other biodiversity programmes with other sustainable development objectives

Enable partners to use the GBIF infrastructure to ensure that their biodiversity-related investments result in open data, the use of which can be tracked to show ongoing impact

Work with other funders to strengthen BID
and expand to other regions

Multiplying the BID impact
