Create Your Organizational Profile

In order to be considered for funding, the first step is for you to introduce yourself and tell us about your organization. Please click on the "Create an Account Now" button below to start. You will not be able to edit your profile after submission, so please ensure you have entered accurate information (including email address) when completing the registration form.

You will then receive an email notification from GBIF with login information, which will give you access to the portal and our application forms. Should your funding application be successful, this portal will give you access to our reporting templates.

PROCHAINES ÉTAPES POUR BID

Rencontre à Bruxelles

13-14 novembre

Aidez-nous à tirer parti du succès
de BID pour atteindre d'autres
régions et à intégrer la mobilisation
et l'utilisation de données dans
d'autres programmes

While progress in sharing, transferring and applying scientific knowledge about the world's biodiversity is steadily improving, **gaps in information about the distribution of the world's biodiversity still impede effective decision-making.**

Such deficiencies are acutely felt in species conservation, protected areas planning and resource management, but the data also underpins biodiversity-related intergovernmental processes like the UN Convention on Biological Diversity (CBD), the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services (IPBES) and the Intergovernmental Panel on Climate Change (IPCC) as well as all dimensions of sustainable development.

GBIF—the Global Biodiversity Information Facility—is an international network and research infrastructure aimed at providing anyone, anywhere access to data about all types of life on Earth. Starting in 2015, the GBIF network began addressing geographic gaps in knowledge through the **Biodiversity Information for Development (BID)** programme. Supported by a €3.9 million grant from the European Union, BID has boosted biodiversity informatics in sub-Saharan Africa, the Caribbean and the Pacific (ACP).

A set of 63 funded projects across the three regions has increased the availability and the use of biodiversity data, while an effective approach to skills training has established new regional communities of practice connected to the global infrastructure.
