

Jacobaea mouterdei

Mobilizing plant species occurrence and sampling-event data from North Lebanon

Hicham El Zein – Wadi ez-Zouhour Lebanon

PROJECT OBJECTIVES

- Funded by Mohammed bin Zayed Conservation Fund
- With the help of O-LiFE – CNRS Lebanon (Environmental Observatory Network)
- Ecological monitoring data mobilization
- About the occurrence of very restricted plant species endemic to the North of Lebanon
- Describe species habitats and ecology (associated species)
- Fill significant gap in data about plant species
- Assess vulnerability of *Jacobaea mouterdei* (IUCN Red List)
- Design species conservation action plan

PROJECT TIMELINE

Most intense period from May to August

- Race against time to collect data
- Very short flowering period in the Mediterranean
- Vegetation dries out early July
- Hopefully, the target species is a perennial shrub visible in spring, summer and fall

First period	Second period	Third period
April to November 2019	November to December 2019	December 2019 To January 2020
Fieldwork for data collection	Data entry and analysis	Writing

Thank you
