

O.P.I.

LACQUER 101 · NAIL LACQUER

BEGINNER

Lacquer Sticker Placement

Learn controlled sticker placement so your design stays flat, adheres fully, and doesn't lift or wrinkle over time.

THE RULES

- Fully dry surface
- Press from center out
- Eliminate air before sealing
- Seal every edge

THE FLEX

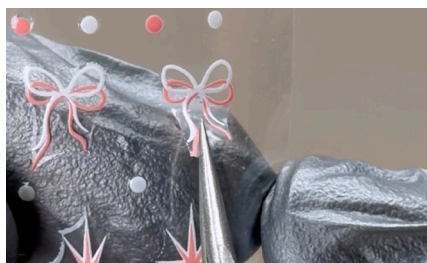

Placement, color, and style are yours to decide. The design has no rules.

OPI TIP

If it's not fully flush, it will lift—even if it looks fine now. Take the extra five seconds on the edges.

BEFORE YOU START

Have Nail Lacquer applied and dry to the touch—not top coated. A soft surface traps air that causes lifting and can also dent the finish.

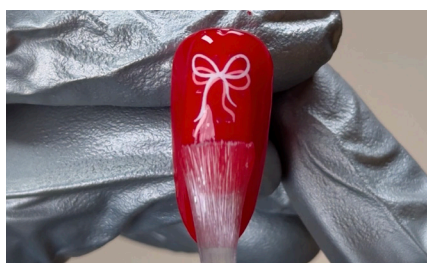

1

Use tweezers to minimize finger contact with the adhesive. Oils weaken adhesion. Place once; repositioning scuffs the surface.

2

Press center outward with a silicone tool until fully flat. Air pockets = lifting. This step determines how long the design lasts.

3

Apply top coat over and around all sticker edges. Sealing is what prevents peeling.
