

# BREEDING

**Mix developed specifically for mares in foal during the last 3 months of gestation and for lactating mares**

Lannoo Breeding is a highly palatable mixture with a limited sugar and starch content combined with the finest sources of protein. This feed is very rich in essential amino acids and contains a balanced Ca/P ratio in addition to all necessary vitamins and easily absorbable trace elements. The carefully chosen raw materials in this mix ensure that mare and foal get the best possible start. The minerals and trace elements support for new bone formation in the foal. This mixture is enriched with live yeasts that support the health of the intestinal flora in both mare and foal.
