Cage and aviary birds

Keeping and breeding birds is a hobby that requires a lot of time and dedication. Before buying birds, it is extremely important to provide the right housing. This is different depending on the type of birds you want to keep or breed.

The majority of bird species in the aviculture industry are seed eaters. Most commercially available mixes provide the main supply of the necessary nutrients, which will ensure a good metabolism in the birds. In addition to a certain percentage of moisture, seeds also contain dry substances composed of organic and inorganic elements:

The organic part consists of the following elements:

- **CRUDE PROTEIN:** proteins are extremely important for the growth and development of young birds, but also for the production of new cells in adult birds. Crude proteins are also necessary for the change of plumage during the moulting season.
- **CRUDE FATS and CARBOHYDRATES:** are the two most important energy suppliers for birds, necessary during the different phases of the metabolism, including regulating body temperature and the optimal functioning of muscles and organs.
- **CRUDE FIBRES:** the right amount of cellulose (crude fibre) is needed for smooth digestion. This crude fibre stimulates the transport of the nutrients in the digestive tract and provides the necessary balancing substances for normal faeces. From the moment the proportion of crude fibre in a mix is increased, the birds will automatically drink more.

In addition to these different nutrients within the organic matter, seeds also contain vitamins. One gets the maximum amount of vitamins from seeds by germinating them in the right way.

Most seeds contain all the nutrients listed above, but the proportions vary according to the type of seed. As the nutritional needs of birds differ depending on the season (breeding season, weaning season, moulting season, or exhibition season), a good knowledge of the nutritional values of different seeds is almost a must. Over the last 50 years, knowledge of how to feed our birds has increased enormously thanks to thorough scientific research. This scientific research forms the basis for today's optimised sowing and harvesting techniques in combination with optimal preservation of the grains and seeds.

In order to meet the nutritional needs of birds in the best possible way, the composition and production of mixes in a 'professional' manner is necessary. King guarantees a complete range of double-cleaned, balanced mixes for birds. These mixes are 'GMP' certified. The compositions of these optimally balanced mixes are a combination of knowledge (science) and experience (successful bird breeders), worldwide.

King quality mixes for birds, worthy of your trust!

What is GMO?

GMO stands for Genetically Modified Organism. Genetic modification means the DNA of the organism has been modified. In the case of vegetable crops, this is done to make them more resistant to certain diseases. Genetic modification is strictly controlled and subject to European legislation to ensure it is safe.

GMO-free / NON-GMO raw materials / GMO-controlled

Despite the fact genetically modified crops have been cultivated and used in animal feed for many years, it remains a hot topic and many people prefer not to use it. Many pet owners and animal lovers have a close relationship with nature and want to treat it with respect. Their aim is to interfere with biodiversity as little as possible. They want to give animals the opportunity to be able to express their natural behaviour while providing them with feed containing purely natural ingredients. Feed without genetically modified raw materials is completely in line with this philosophy. Claiming a product is 100% GMO-free is not always feasible in practice because there is always a potential for cross-over of raw materials during collection, intermediate storage, transport, processing, etc. This residue, however small, could be for example, GMO maize. Legislation has provided for this and refers to NON-GMO raw materials. This term applies to batches of raw materials that consist of at least 99.1% pure, non-genetically modified product.

GMO-free Formulated

Strict requirements concerning the purchase of raw materials, careful production processes, and meticulous control of feeds ensure they are as free from GMOs as possible. This method is laid down in an additional GMP+ quality system and is called GMO-Formulated.

These feeds are thus formulated GMO-free, as it were.

KING

Canary mixes

Canary mixes

The basic range of King canaries mixes consists of 2 different mixes, composed of seeds of the best quality, which meet the essential nutritional needs of canaries at a 'budget' friendly price.

Canary

Item No. 700200220 - 20 KG

Composition

Canary seed	62%
Rapeseed	20%
Hulled oats	8%
Niger seed	4%
Linseed	3%
Hemp seed	3%

Canary without rapeseed

Item No. 700791220 - 20 KG

Composition

Canary seed	68.5%
Hulled oats	10%
Niger seed	10%
Linseed	7.5%
Hempseed	4%

Canary mixes 'luxury'

This premium range of King mixes for canaries consists of 2 different mixes especially for the professional canary breeder.

Both mixes have been formulated based on the advice of generations of successful canary breeders. These mixes are formulated with the highest quality ingredients to the satisfaction of even the most critical bird breeders.

Canary breeding 'luxury'

Item No. 702332220 - 20 KG

Sorghum	5%
White lettuce seed	5%
White dari	5%
Niger seed	2%

HOW TO SOAK SEEDS:

First rinse the seeds and grains under running water and soak them in water for 12 hours at room temperature (21°). Refresh the water regularly during this period. After about 12 hours, take the seeds out of the water and rinse them well under cold, running water. The soaked grains and seeds are now ready for use and can be given pure or mixed with the King egg feed.

HOW TO MAKE SEEDS GERMINATE:

First rinse the seeds and grains under running water and let them soak for 12 hours at room temperature (21°). Refresh the water regularly during this period. Afterwards, rinse these grains and seeds thoroughly under cold, running water. Allow the grains and seeds to germinate for 24 to 48 hours in a germination sieve or germination tray. Moisten regularly and cover with a damp cloth. These sprouted seeds are now ready to use pure or to mix with the King egg feed. Note: always germinate only the portions that will be used immediately. The freshness of sprouted seeds is very important. It is best to use only sprouted feed with sprouts no longer than 1 cm. Why? If the sprout is larger than 1 cm, it will have a bitter taste and will be poorly absorbed by the birds.

Parakeet mixes

Parakeet mixes

Parakeets

Item No. 700210220 - 20 KG

Turtledoves

Turtledove mixes

Turtledoves are fun and attractive birds in the aviary, in the loft, or free-range in the yard. They get used to people quite well and tame pigeons will even come to you, especially if you feed them at set times with the right feed.

This mix is rich in fine grains and seeds and is well liked by turtledoves and other small exotic pigeons. It can also be used perfectly as scatter feed in gardens and parks.

Egg feed, soft feed & hand-rearing feed

Egg feed

Egg Feed

King Egg Feed is a complementary yellow egg feed for all species of seed-eating birds and ornamental birds.

Due to its slightly coarser structure, it is easily and fully absorbed by birds. The Extra Moist variant has an extra wet texture that is also highly appreciated by birds.

King Egg Feed contains all the necessary nutrients as a supplementary feed for young and adult birds during the resting, breeding, and moulting seasons: proteins of animal and vegetable origin, vitamins, amino acids, minerals, and trace elements.

King Egg Feed is made with high-quality raw materials and is ready to use.

Instructions

The ready-made King Egg Feed can be offered pure or, if desired, mixed with germinated seeds, vegetables, and/or fruit.

- rest period: feed 1/4 of the total daily ration with King Egg Feed 2 to 3 times a week.
- breeding period: King Egg Feed may be made freely available to the birds.
- moulting season: feed 1/4 of the total daily ration with King Egg Feed every day.

King Egg Feed 4 x 1 kg

Item No. 824700

King Egg Feed
Extra Moist 400 g
Item No. 824704

Soft feed

Rearing Food

Complementary feed for red canaries and all other types of red-tinted ornamental birds.

Due to its slightly coarser structure, King Rearing Feed is easily absorbed by the birds. King Rearing Feed contains all the necessary nutrients as a supplementary feed for young and adult birds during the resting, breeding, and moulting seasons: proteins of animal and vegetable origin, vitamins, amino acids, minerals, and trace elements. King Rearing Feed is made with high-quality raw materials and is ready to use.

Instructions:

The ready-made King Rearing Feed can be offered pure or, if desired, mixed with germinated seeds, vegetables, and/or fruit.

- Rest period: feed 1/4 of the total daily ration with King Rearing Feed 2 to 3 times a week.
- Breeding period: King Rearing Feed may be made freely available to the birds.
- Moulting season: feed 1/4 of the total daily ration with King Rearing Feed every day.

Universal Patee

King Universal Patee is a complete feed for all kinds of insect- or fruit-eating birds.

Due to its slightly coarser structure, King Universal Feed is easily absorbed by the birds. King Universal Patee contains all the necessary nutrients as a complete feed for young and adult birds during the resting, breeding, and moulting seasons: proteins of animal and vegetable origin, vitamins, amino acids, minerals, and trace elements.

King Universal Patee is made with high-quality raw materials. This product contains dried gammarus and berries. Due to the addition of natural sugars, King Universal Patee is very easily absorbed by the birds.

Instructions:

The ready-made King Universal Patee may be made freely available to the birds. Use fresh portions every day. For fruit-eating birds, offer pieces of fresh fruit in a separate feeding dish.

King Hand-rearing

King Hand-Rearing Feed is a balanced formula based on carefully selected and highly digestible ingredients. It contains many nutrients that help the chicks grow faster, wean earlier, and develop stronger, brighter plumage. King Hand-Rearing Feed contains probiotics, organic acids, and digestive enzymes to encourage a healthy population of intestinal micro-organisms and an ideal crop environment, as well as ensuring appropriate digestion of carbohydrates and proteins. King Hand-Rearing Feed has a fine grind for making it highly soluble in water for easier feeding using a syringe, improving the digestion and absorption.

Is available in two versions:

High Energy 20/15

- This hand-rearing feed is ideal for birds which require a higher fat content (15%).
- Ideal for all birds younger than 10 days.
- Perfectly suited for bird species like African greys, macaws, budgies, black cockatoos, salmon-crested cockatoos, and eclectus parrots.
- Also ideal for smaller songbirds.

Item N° 754415 - 500 G

High Protein 22/8

- This hand-rearing feed is ideal for birds that require higher protein levels (22%) and a lower fat content (8%).
- Ideal for bird species like Amazons, cockatoos, cockatiels, large parakeets, lovebirds, etc.
- Also suited for smaller bird species like canaries, tropical finches, budgies, etc.
- Also perfectly suited for complementary feeding of sick birds, stragglers in the nest, birds found in the wild, or orphaned birds.

Item N° 754408 - 500 G

KING

Mineral feed & bedding

Mineral feed

Item No. 750220 - 20 KG

Bird Grit

King Bird grit is a mix of seashells, oyster shells, redstone, and charcoal.

The purified charcoal promotes good digestion and absorbs the bad substances in the bird's crop. King Bird Grit prevents mineral deficiencies. King Bird Grit contains no artificial colourings or flavourings... in other words, a quality product.

Instructions:

1 tablespoon per 2 to 4 birds. Do not be surprised if the grit remains untouched during the first few days. Birds only eat small amounts of it.

Composition:

Calcareous marine shells, Redstone, Stomach grit, Calcium carbonate, Charcoal

Item No. 750222 - 1.5 KG

Hi-Calcium Grit

Mineral feed for ornamental birds

Hi-Calcium Grit is a rich source of essential minerals and trace elements, which are necessary for both healthy bones and strong egg shells. It also aids digestion.

Composition:

Calcareous marine shells, Redstone, Stomach grit, Calcium carbonate, Charcoal

Bedding

Item No. 750214 - 20 KG

Bird Sand

King Bird Sand: consists of finely ground oyster and seashells.

King Bird Sand is a 100% natural product and is heated to over 100°C during the production process.

King Bird Sand is the ideal bedding in both cages and aviaries.

King Bird Sand ensures good hygiene in birds, an important factor for their good health.

Item No. 750213 - 2 KG

Krystal Sand

Shell sand

Krystal Sand is a 100% natural product sterilised at a high temperature. It is ideal as a bedding in cages and aviaries. No excess dust. Fresh anise scent.
