PRIMATE VITAMIN D3

COMPLEMENTARY FEED FOR MONKEYS

Feed supplement for primates. Vitamin D plays an important role in various organ systems:

- Vitamin D regulates the levels of calcium and phosphorous in the blood by promoting its absorption from the food in the gut as well as its reabsorption in the kidneys
- It reduces calcium loss from the bone

Dosage per day: 1 spoonful (3 g) for every 6 animals; equivalent to 0,5 g per animal daily (= 40 i.u.)

Composition: Wheat flour, calcium carbonate

Analytical constituents:

Crude Protein	10	%
Crude Fat	1,5	%
Crude Fibre	0,5	%
Crude Ash	5	%
Calcium	2,0	%

Nutritional additives (/kg):

3a671 Vitamin D3 80000 IU

Product form: powder

Contents: 400 gr.

Storage: In a cool and dry place
