

Become a Capital Markets Signatory

Understanding climate risks and
maximizing financial rewards:
The benefits for investor signatories

2026

CDP's global disclosure system equips capital markets with the data needed to support their sustainable, net-zero investing or lending strategies. Whether through engagement, research, peer benchmarking, targets assessment, footprinting and much more - comparable and comprehensive reported data is the gold standard for appropriate action.

Capital market actors are better able to mitigate risks associated with climate uncertainty, water insecurity, and nature degradation.

Additionally, investee companies who disclose are putting in place the people and data to build resilience and seek sustainable opportunities compared to their peers. Working together with actionable data and insights, financial institutions and investee companies can steer a path towards a transition that works for people and planet.

"CDP provides investors with a powerful platform for mutually beneficial cooperation. Through the climate-related data collected and analyzed by CDP, it fosters in-depth dialogue and collaboration between companies and investors in climate change, enabling investors to make more accurate investment decisions."

Through our unique capital market signatory program, investors unlock:

Multi-framework corporate disclosure at your fingertips from IFRS S2, TCFD, TNFD, ESRS and more.

Regular disclosure status updates.

Unique, CDP-led collaborative engagement initiatives.

Insights, tools, and unique signature products.

The ability to help satisfy PRI Principles 1-4; relating to ESG investment analysis, active ownership, corporate disclosure and investor collaboration.

Unlimited access to current and historical datasets on company reported data, CDP scores for climate change, forests and water security, plus access to scores via Bloomberg.

Modelled scope 1, 2 & 3 emissions data set over 14,000 companies covering all major indices.

Signature products

Greenhouse Gas (GHG) Modelled Emissions Dataset

CDP's full GHG modelled emissions dataset includes reported and estimated emissions for Scope 1, location-based and market-based Scope 2, Scope 3, Scope 1 + 2 revenue intensity; and fuel and steam, heat, electricity & cooling (SHEC) data.

The dataset models emissions for the Carbon Action companies, a group of the highest-emitting public companies on which the investor-led Carbon Action Initiative focuses, and constituents of the MSCI ACWI, a widely used international index covering around 85% of the investable equity universe, for a total sample of over 9,000 companies.

For more information, visit [our website](#).

Net-Zero Alignment Dataset

CDP's NZAD utilizes target-based temperature alignment scores (ITR), greenhouse gas (GHG) emission metrics and transition plan data to help FIs understand which companies have 1.5°C targets and plans, and assess their credibility and recent performance. As of December 2023, the NZAD also integrates the Sectoral Decarbonization Approach (SDA) to assess the performance and ambition of high-impact companies against sector-specific intensity trajectories.

Collaborative engagement initiatives

Directly engaging Non-Disclosing Organizations

In addition to supporting our annual disclosure request, signatories can opt in to select and directly target a sub-set of companies that are yet to disclose. This year, we will work with participating signatories to target companies with the highest emissions, ensuring that together we drive the greatest impact.

Together, we can promote greater corporate transparency around climate change, deforestation, and water security, using the power of your request to encourage more comprehensive disclosure.

Nature

Gain exclusive access to the world's most comprehensive environmental dataset on nature-related risks and opportunities. As a CDP signatory, you'll tap into expert analysis and actionable insights from leading sustainability specialists who understand your sector's unique challenges. Access standardized, comparable data across thousands of companies globally, enabling informed decision-making on biodiversity, water security, and forest-related dependencies. Our subject matter experts provide guidance on emerging regulations, best practices, and strategic responses to nature-related financial risks. Transform raw data into competitive advantage.
