

# End to end solution for CDP

- Has your company been requested to respond via a supplier, customer or investor?
- Have you considered responding but were put off by the complexity of the questionnaire and its methodology?
- Has your CDP score stagnated or fallen, not reflecting your company's sustainability progress?
- We understand that CDP submission can be challenging and time-consuming and offer a full life cycle support with CDP, taking full control or working collaboratively with in-house sustainability teams. At the core of our offering is a proprietary CDP Scoring Tool, used to analyse responses pre-submission, taking the guesswork out of scoring and providing question-specific feedback and support in implementing recommendations at every step of the way

## Holistic submission support

Responsibility for collation of data and disclosures, as well as populating the 2025 questionnaire

## Score first draft of CDP 2025

Pre-submission score, identification of material gaps, question-specific feedback

## Score further iterations

Scoring of further response versions, adjusting for changes, progress tracked

## Post-results management

Identification of actions for next year's response, support of the appeal process, as required

In 2024 we supported client submissions across a range of sectors and environmental themes, achieving strong scores for both repeat and first time respondents

- 100% accuracy in pre-submission scoring
- 8 clients saw year-on-year score improvements
- One successful appeal: score upgraded to B from D

"We are delighted to have further improved on our 2023 scoring by recording an uplift in Water to an A- (from a B in 2023) and consolidating a B for Climate. These are our highest scores in over 10 years we have been completing CDP."

Coats Group plc, FTSE 250
