

Climate Change: Beginners

Group Support Webinar

July 2026

Presenter

Veronica Celedon

Senior Account Manager
Sustainable Supply Chains, CDP

An aerial photograph of a green agricultural field with white contour lines. A white circle is drawn over the field, and a white line crosses it diagonally from the top left to the bottom right.

Agenda

Introduction to CDP

Accessing Your Questionnaire

Beginner Roadmap and Scores

Key Datapoints Overview

Getting Started: Key Resources

Introduction to CDP

CDP runs the world's largest environmental disclosure platform and discloser network

250+

Supply Chain Members - including Microsoft, Walmart, Unilever, L'Oréal and more

\$110 trillion

in assets held by 540+ financial institutions

10,900+

SME disclosers

22,100+

disclosing companies worth more than half of global market capitalization

110 countries

Corporate disclosers were based in approx. 110 countries in 2025

Corporate disclosure via CDP remains strong

Number of corporate disclosures by environmental theme in 2025

■ Total disclosing companies ■ Climate change ■ Biodiversity ■ Water security ■ Plastics ■ Forests

22,100+ companies worth two-thirds of global market cap disclosed in 2025

4,400+ companies started their disclosure journey for the first time in 2025

Why Disclosure Matters

Identify Financial Risks & Opportunities to Remain Competitive

- Environmental risk = Financial risk
- Scope 3 emissions are **26× larger** than operational emissions
- Companies identified **\$16T+** climate & nature opportunities

Improve Financial Performance & Access to Capital

- Investors managing **25%** of global assets request CDP data
- Preferential financing tied to CDP scores (e.g. **\$2.5B loan**)

Drive Efficiency & Revenue Growth

- **\$13B saved** through Scope 3 action (last year)
- \$1 invested in adaptation → **\$2–\$19 return**
- Sustainable products: **+25%** revenue uplift

Stay Ahead of Regulation

- Disclosure becoming mandatory globally
- **“Write once, read many”** – one disclosure, multiple uses

Companies that disclose through CDP may reduce direct emissions by **7-10%** within just 2 years – demonstrating that disclosure is not just another tick box exercise.

Enabling standards-aligned disclosure globally

CDP turns standards into something tangible an organization can use; questions and datapoints to be answered and actioned, sharing this high-quality data back to stakeholders and the market in one dataset.

2026 Disclosure Timeline

Accessing your questionnaire

Navigating through CDP portal, requests, and submitting your questionnaire setup

Accessing your questionnaire

Invitation from your requester/customer

If you are disclosing for the **first time**, there are a few ways to get started.

Your organization will be receiving one of the following invitations:

1. Email from mail@cdp.net to enter myportal.cdp.net
2. **Activation link** from your Requester to setup your username and password
3. **Register to disclose form link** from your customer to request access to your organization's portal

Please ensure you check your junk mail and that mail@cdp.net is whitelisted by your organization's IT department

(Note: If you already have an account, please login using your previous username and password.
If you see the same login page when you try to enter MyPortal, please sign in and raise a case in [Help Center](#).)

Accessing your questionnaire

Portal onboarding and questionnaire setup

1

Access your organization's CDP portal

2

Confirm Submission Lead

3

Review customer requests (including late requests and subsidiary requests)

4

Select disclosure admin fee status:

Customer Request only:
"no fees payable"

CDP Capital Market
addition:
"select admin fee"

5

Complete questionnaire setup

Accessing your questionnaire

Additional resources

Knowledge Base Articles:

- [Accessing the CDP Portal as a Discloser](#)
- [Discloser roles and managing team members](#)
- [Navigating CDP's Portal and Questionnaire as a Discloser](#)

Introduction to CDP Disclosure Webinar

Links to access can be found in the Resources section of this presentation

Beginner Roadmap and Scores

Roadmap for Disclosers

Scope of this session:

Phase 1: Establish foundation

Phase 2: Build capacity

Phase 3: Improve performance

Principles of Scoring

Scoring is a core enabler of CDP's mission to incentivize companies to measure and manage environmental impacts. CDP scoring:

- Incentivizes complete and transparent disclosure, then focuses on how companies deal with their environmental impacts.
- Provides data that customers can understand and act on.

The CDP score is based on the information disclosed in the CDP response for the reporting year. It indicates the **level of action reported** by the company to assess and manage its environmental impacts. Your company will receive a score if the questionnaire is submitted before the **scoring deadline**.

Full details on our scoring process are outlined in **CDP's 2026 Full Corporate Scoring Introduction**

About CDP scores

A CDP score provides a snapshot of a company's disclosure and environmental performance.

Scores indicate the level of action reported by the company to assess and manage its environmental impacts during the reporting year.

To assess and review your responses base on our **scoring methodology**, you can find the details directly in your MyPortal or [here](#).

Application of Essential Criteria

Ensures companies meet **minimum specific criteria** before attaining the next letter grade

Essential Criteria Documents

Climate Change

Water Security

Forests

Key Data Points Overview

Roadmap for Disclosers

Phase 1: Establish foundation

Phase 2: Build capacity

Phase 3: Improve performance

Full Corporate Questionnaire

Module 7:

Environmental Performance – Climate Change

Priority data for your Requesters is not limited to that which is highlighted in this presentation. The chosen datapoints for this deep-dive include critical data that many Requesters request from beginner disclosers.

Integrated Questions

4.1.1: Is there board-level oversight of environmental issues within your organization?

Environmental Issue	Board-level oversight of this environmental issue	Primary reason for no board-level oversight	Explain why your organization does not have board-level oversight
Climate	• Yes • No, but we plan to within the next two years • No, and we do not plan to within the next two years	• Lack of internal resources • No standardized procedure • Other, please specify	<i>Open text</i>
Water Security			
Forests			
Oceans			
Biodiversity			

Focus: Setting Reporting Boundary

Your organization's **reporting boundary** refers to the organizational entities, such as groups, businesses, and companies, that are included in or excluded from your disclosure.

This supports your requesters to interpret how your responses relate to your business operations.

1.5,
6.1

Reporting Boundary Approaches

- Financial control approach
- Operational control approach
- Equity share approach
- Other approach

Useful Resources:

1. [Greenhouse Gas Protocol Corporate Standard](#)
2. [SBTN Technical Guidance Step 1 Assess](#)

Roadmap for Disclosers

Example: climate

Phase 1: Establish foundation

Phase 2: Build capacity

Phase 3: Improve performance

Introduction to emission accounting

Operational emissions

Scope 1 – Direct GHG emissions from owned or controlled sources

Scope 2 – Indirect GHG emissions from the generation of purchased energy

Value chain emissions

Scope 3 – All indirect GHG emissions (not included in scope 2) that **occur in the value chain** of the reporting company, including both upstream (supply chain) and downstream (use of products) emissions.

Focus: Emission data – Scope 1

7.6

Scope 1 emissions refer to **direct greenhouse gas (GHG) emissions** that occur from sources that are **controlled or owned** by an organization.

Examples:

- Combustion of fuels (e.g. in boilers, furnaces) for the generation of electricity, heat or steam;
- Combustion of fuels (e.g. in trucks, cars) for the transportation of materials, products, waste, employees;
- Manufacture or processing of chemicals and materials (e.g. cement, aluminium);
- Fugitive emissions from intentional or unintentional releases, (e.g.; HFC emissions from refrigeration or air conditioning; methane leakages from gas transport).

Methodologies to calculate Scope 1 emissions include the direct measurement based on the purchased quantities of commercial fuels (e.g. gas, heating oil) converted to CO₂ equivalents using published emission factors (e.g. [DEFRA](#)).

Useful resources:

1. [GHG Protocol Corporate Accounting and Reporting Standards](#)
2. [GHG Protocol Tools and Emission Factors](#)
3. [Scope 1&2 GHG Inventory Guidance](#)
4. [Scope 1 Training](#)
5. [EPA Simplified Emissions Calculator](#)
6. [SME climate hub carbon calculator](#)

A calculation approach for Scope 1

Estimation based on activity data and emissions factors

What is the activity data?

Data from an activity resulting in emissions e.g. gasoline used (gallons)

Common Scope 1 Sources of Activity Data

Gas Meters & Gas Bills

Fuel expense Claims and Bills

Fuel Deliveries

EPR Data

F-Gas Registers

What is an emissions factor?

It is the average emission rate of a given source. It describes the rate at which a given activity releases greenhouse gases (GHGs) into the atmosphere.

Emission factors convert activity data to emission values

Presented in specific units,

- e.g. Kilograms of CO₂ per air kilometer traveled
- Kilograms of CO₂ per liter of petrol/gasoline

Where can you find emissions factors?

Published by various entities, including government agencies and intergovernmental organizations

The final emissions figure is reported in metric tonnes of carbon dioxide equivalent.

Activity Data
(MWh)

x

Emissions Factor
(t/CO₂e/MWh)

=

Emissions
(tCO₂e)

Example sources of emissions factors

- [GHG Protocol Calculation Tools and Guidance](#)
- See cross-sector tools- Emissions Factors
- [IPCC- Emissions factor database](#)
- [IEA -Pilot emissions factors](#)
- Government agencies – country specific e.g. Defra in the UK, eGRID and US EPA in the US
- Sector specific sources:
 - WBCSD Sustainable Cement Initiative
 - International Petroleum Industry
 - International Aluminum Institute

Calculation Tools and Guidance

GHG Protocol tools enable companies and cities to develop comprehensive and reliable inventories of their GHG emissions, and help countries and cities track progress toward their climate goals.

Calculating emissions is a multi-step process. An accurate and useful inventory can only be developed after careful attention to quality control issues and to the activity data required. Only then should emissions be estimated. Companies should consult GHG Protocol's **Corporate Accounting and Reporting Standard** for guidance on the entire inventory development process.

Below is a complete listing of all tools developed by GHG Protocol. Our tools enable companies to develop comprehensive and reliable inventories of their GHG emissions. Each tool reflects best-practice methods that have been extensively tested by industry experts. Many tools are accompanied by a PDF guidance document, which provides step-by-step guidance on the use of a tool and need to apply more than one tool to cover

There are different resources for navigating the tools:

- **Cross-sector tools:** Applicable to many sectors.
- **Country-specific tools:** Customized for specific countries.
- **Sector-specific tools:** Principally designed for specific sectors, though they may be applicable to other sectors.
- **Tools for countries and cities:** The tools designed for countries and cities to track progress toward their climate goals.

Review Service

The "Built on GHG Protocol" mark recognizes tools and guidance that are in conformance with a GHG Protocol standard.

Disclaimer

Before using these tools, please read our [disclaimer](#).

CROSS-SECTOR TOOLS

These tools are applicable to many industries and businesses regardless of sector.
Note: International emission factors for electricity use are no longer available from the GHGP website and can be purchased from the IEA.

Tool	Description	Download Worksheet
Emission Factors	This workbook contains cross-sector emission factors and unit conversions that can be used to estimate emissions from stationary combustion, purchased electricity, and mobile combustion.	Date: May 7
GHG Emissions from Stationary Combustion (English)		Date: Feb 28
GHG Emissions from Stationary Combustion (Chinese)		Date: Mar 17

Focus: Emission data – Scope 2

Scope 2 emissions refer to **indirect GHG emissions associated with any purchases of electricity, steam, heat, or cooling.**

Example: Electricity purchased to operate machines, lighting, electric vehicle charging, etc.

7.7

As **methodology** to calculate Scope 2 emissions the GHG Protocol recommends multiplying activity data (e.g. MWhs of electricity consumption) by source and discloser-specific emission factors to arrive at the total GHG emissions impact of electricity use. Emissions should be converted to CO₂ equivalents.

Useful resources:

1. [CDP Technical Note: Accounting of Scope 2 emissions](#)
2. [GHG Protocol Scope 2 Guidance](#)
3. [Scope 2 Training](#)
4. [EPA Simplified Emissions Calculator](#)
5. [Scope 1&2 GHG Inventory Guidance](#)

A calculation approach for Scope 2

Estimation based on activity data and emissions factors

What is the activity data? Amount of electricity purchased and consumed in megawatt-hours (MWh)

What is the emissions factor? Average value, for a given period of time, of emissions per MWh, for either a specific grid, discloser or energy generation source.

The final emissions figure is reported in metric tonnes of carbon dioxide equivalent.

Common Scope 2 Sources of Activity Data

Metered electricity consumption
Utility bills specifying consumption

**Activity Data
(MWh)**

x

**Emissions Factor
(t/CO₂e/MWh)**

=

**Emissions
(tCO₂e)**

Scope 2 Accounting Methodologies

Location-Based Scope 2 Emissions

Reflects the average intensity of the electricity grid where consumption occurs.

To determine activity data, metered electricity consumption or utility bills specifying consumption in MWh or kWh units can provide the most precise activity data.

Market-Based Scope 2 Emissions

Reflects emission from energy products your company has intentionally purchased with consideration of contractual instruments like Energy Attribute Certificates and Power Purchase Agreements.

More detailed and precise method. Allows your company to take credit for energy investments and allows your Requesters to acknowledge your company for this progress.

Focus: Emission data – Scope 3

Scope 3, value chain emissions - all the other emissions that occur related to your operations but from sources that you do not own or control.

Examples:

purchased goods and services, transportation and distribution, and use of sold products

7.8

As **methodology** to calculate Scope 3 emissions, the GHG Protocol offers a Scope 3 Standard with 15 categories of Scope 3 activities, both upstream and downstream of a company's operations.

Detailed, technical guidance on all the relevant calculation methods can be found in the Scope 3 Calculation Guidance, a supplement document to the Scope 3 Standard.

Useful resources:

1. [CDP's Scope 3 Category Technical Note](#)
2. [Greenhouse Gas Protocol Corporate Value Chain \(Scope 3\) Accounting and Reporting Standard](#)
3. [Greenhouse Gas Protocol Scope 3 Calculation Guidance](#)
4. [Webinar: How to calculate and reduce your scope 3 impact](#)

Focus: Emissions Verification

CDP regards verification/assurance as a process undertaken by an independent third party accredited to perform verification/assurance of the GHG emissions data.

7.9

Why verification is important:

- Improving internal processes
- Increasing data reliability towards stakeholders (e.g. clients, investors)
- Identifying risks and opportunities
- Build reputation and gain competitive advantage
- Aligning to regulation & legislation (e.g. Non Financial Reporting)
- Accurate understanding of emissions operationally

For these reasons, CDP supports verification and assurance as good practice in environmental reporting. Verification information is very relevant among the scoring criteria of the Full questionnaire.

Useful resources:

1. [CDP Verification guidance](#)
2. [The Business benefits of third party verification of climate data](#)
3. [CDP Verification FAQs](#)

Focus: Emission intensity

Intensity measures describe an organization's CO2e emissions in the context of another business metric. This way, the emissions are normalized to account for growth. Your intensity figure allows your Requester to benchmark your performance within and across industries.

7.45

Intensity is calculated by dividing the **CO2e emissions** figure (the numerator) by an alternative **business metric** (the denominator); for example:

- Revenue
- Number of full-time equivalent employees (FTE)
- Units of production
- Tons, meters, liters, or other metrics of production

Tips:

1. Emissions intensity per unit of revenue is one the most common and easy means to calculate emissions intensity, which is why it is requested that you provide this figure.
2. Make sure that the revenue figure refers to the same organisational boundary of your emissions data.
3. Ensure currency and unit of measure are correct.

Focus: Emission intensity Example

7.45

Formula for calculating an emission intensity using revenue

$$\text{GHG Emissions Intensity (MT CO}_2\text{e / your revenue)} = \frac{(\text{Global scope 1 emissions}) + (\text{Global scope 2 emissions})}{(\text{Total annual revenue})}$$

Working example for calculating an emission intensity using revenue

$$0,06 \text{ MT CO}_2\text{e / €} = \frac{300,000 \text{ metric tons CO}_2\text{e}}{5,000,000 \text{ €}}$$

Roadmap for Disclosers

Example: climate

Phase 1: Establish foundation

Phase 2: Build capacity

Phase 3: Improve performance

Focus: Emission reduction target

Target setting demonstrates your intention to act on emission reduction and provides direction and structure to environmental strategy.

7.53, 7.53.1, 7.53.2

Components of an emissions reduction target:

- Target type:
 - Absolute (tons CO₂e)
 - Intensity (tons CO₂e per unit of activity)
- Base year
- Target year
- Scope
- Targeted reduction from base year in % or Mt CO₂e

Best practice:

Setting a target that is in line with the latest climate science necessary to meet the goals of the Paris Agreement (limit global warming to well below 2°C above pre-industrial levels and pursue efforts to limit warming to 1.5°C)

Learn more on [SBTi website](https://sciencebasedtargets.org/)

Example Target

Target Type	Base Year	Target Year	Scope	Targeted reduction in % or Mt CO ₂ e
Absolute	2020	2030	Scope 1	30%

Company A will reduce Scope 1 greenhouse gas emissions by 30% by 2030 from a 2020 base year.

Example Target

Partial scope coverage

Target Type	Base Year	Target Year	Scope	Coverage	Targeted reduction in % or Mt CO ₂ e
Absolute	2020	2030	Scope 1	Domestic delivery fleet	30%

Company A will reduce of Scope 1 greenhouse gas emissions from our domestic delivery fleet by 30% by 2030 from a 2020 base year.

Roadmap for Disclosers

Example: climate

Phase 1: Establish foundation

Phase 2: Build capacity

Phase 3: Improve performance

Focus: Emission reduction initiatives

Reporting emissions reduction initiatives demonstrates tangible actions that your organization is taking to reduce emissions.

Report details of the initiatives that were completed in the reporting year:

- Category and type of initiative
- Estimated annual CO2e savings
- Scope(s)
- Annual monetary savings
- Payback period

7.55, 7.55.1, 7.55.2

Examples:

- **Energy efficiency in production processes:** Machine/equipment replacement (ex: replacement of oil boilers with heat pumps), process optimization
- **Energy efficiency in building services:** Energy audits, building insulation, HVAC improvements
- **Transportation-** Changing fuel type (ex: moving from diesel to biofuel), replacement of fleet vehicles with EVs
- **Low Carbon energy consumption & generation:** Switching to renewable energy, installing solar panels
- **Waste reduction and material circularity:** Chemical recycling program, packaging optimization

Action Library for emissions reduction initiatives

Explore here at WBCSD-
The Climate Drive

Case Study

Reduce fuel oil through hydrogen substitution

By retrofitting an oil-fired lime kiln, the Pacifico pulp mill aims to reduce fuel oil consumption and GHG emissions by using residual hydrogen from a nearby sodium chlorate plant.

APPLIED BY
 **Empresas CMPC S.A.**

Retrofitting Hydrogen

Last updated on: 21/11/2023

Action

Decarbonize road freight with battery electric trucks

A switch from ICE to BEV trucks in transportation, using electric motors, can reduce direct fuel combustions emissions from fossil fuels

EXPLAINED BY
 **WBCSD**

Freight Electric Vehicles

Last updated on: 31/10/2022

Action

Transition to a just, net-zero, and nature positive economy

Addressing the climate emergency and nature loss is impossible without putting people at the center and ensuring a just transition that is equitable and inclusive for all.

EXPLAINED BY
 **WBCSD**

Just transition

Last updated on: 21/11/2023

Focus: Energy

Reporting on your renewable energy use helps your Requesters to track reductions in their discloser emissions and assess the level of risk in relation to fossil fuel reliance.

Renewable energy is energy taken from sources that are inexhaustible such as wind, solar, hydropower, geothermal, sustainable biomass and marine (tidal and wave energy).

Waste energy and hydrogen should not be included if derived from fossil fuels.

7.30, 7.30.1

Methodology:

- You should enter all energy data in Megawatt-hours (MWh). If your raw data is in energy units other than MWh, such as Giga-Joules (GJ) or British Thermal Units (Btu), then you should convert to MWh.
- Conversion factors from other energy units are available from a variety of online calculation tools, including from [IEA](#) and [OnlineConversion.com](#), or from conversion tables such as those in [EPA AP-42 \(Annex A\)](#).

Resources:

1. CDP Webinar: [Leadership on Renewables: Achieving 100% and Cascading Down the Supply Chain](#)
2. Guidance: [CDP Technical Note: Conversion of fuel data to MWh](#)

Renewable Energy

Consumed energy

Total energy consumed for electricity, heat, steam, and cooling

Purchased energy

Energy purchased for electricity heat, steam, and cooling
Scope 2 emissions

Generated energy

Self-generated energy produced by your organization
Scope 1 emissions

Beginner Datapoints

What to focus on?	Related question #	Why is this important?
Disclose to CDP – preferably publicly	n/a	Disclosing to CDP helps build understanding of your environmental impacts and relationships. A public disclosure helps stakeholders understand your ambition.
Report Scope 1 & 2 emissions	7.6 7.7	What is measured can be managed. Reporting information on operational emissions can highlight areas of improvement and prepare you for any future emissions-related regulatory requirements.
Report Scope 3 emissions	7.8	Scope 3 accounting is essential for a comprehensive emissions inventory, enabling supplier engagement, risk management, and reduction opportunities. Prioritize key upstream categories—especially purchased goods and services and upstream transportation.

Planning and taking
concrete actions

Getting started: Key resources

Best Practice Reporting

- Avoid blank cells, errors, and inconsistencies
- Go through the questionnaire with the scoring methodology and **reporting guidance** to ensure you meet all possible criteria for each question
- Use the **book icon** within the questionnaire to open guidance for each question
- For **qualitative responses**, provide clear explanations, rationales, company specific responses
- Identify and **designate teammates** for stakeholder outreach and questionnaire response
- Try to **prioritize questions** or datapoints your requesting customers have specifically outlined in their communications.

CDP 2026 Disclosure Information:
Includes key dates, links to reporting guidance and resources, key changes, and more.

How to Disclose:
Includes step-by-step guides for how to get started, CDP technical guidance, and more.

CDP Questionnaires, scoring methodology and reporting guidance

Additional Disclosure Tips

Accepting Requests

- Your organization may have customer requests added mid-disclosure cycle. These requests will need to be accepted by your organization for those customers to see your response.
- Your organization may have subsidiaries within its reporting boundary that have customer requests. Be sure to review these requests and accept them if applicable.
- CDP Article: [How to accept a request](#)

CDP Languages

- You can select from any of CDP's core language to disclose. Please note that only CDP core languages are scored – responses under language the selection of “other” will not be scored.
- Core languages include English, Japanese, Simplified Chinese, Brazilian Portuguese, Spanish
 - Special Note: If you are disclosing in Portuguese, please select “Brazilian Portuguese”.

Access additional support articles on the [CDP Knowledge Base](#).
