Vision & Mission

"Our vision is to enable other companies to realize their green vision and improve sustainability.

That's why we don't sell you products such as individual calculations, selected reports or CO2 certificates, but provide you with holistic support in all ESG matters - which are and will be important for YOUR company and YOUR sustainable business now and in the future."

Dr.-Ing. Thomas Fleissner

Founder & CEO of DFGE

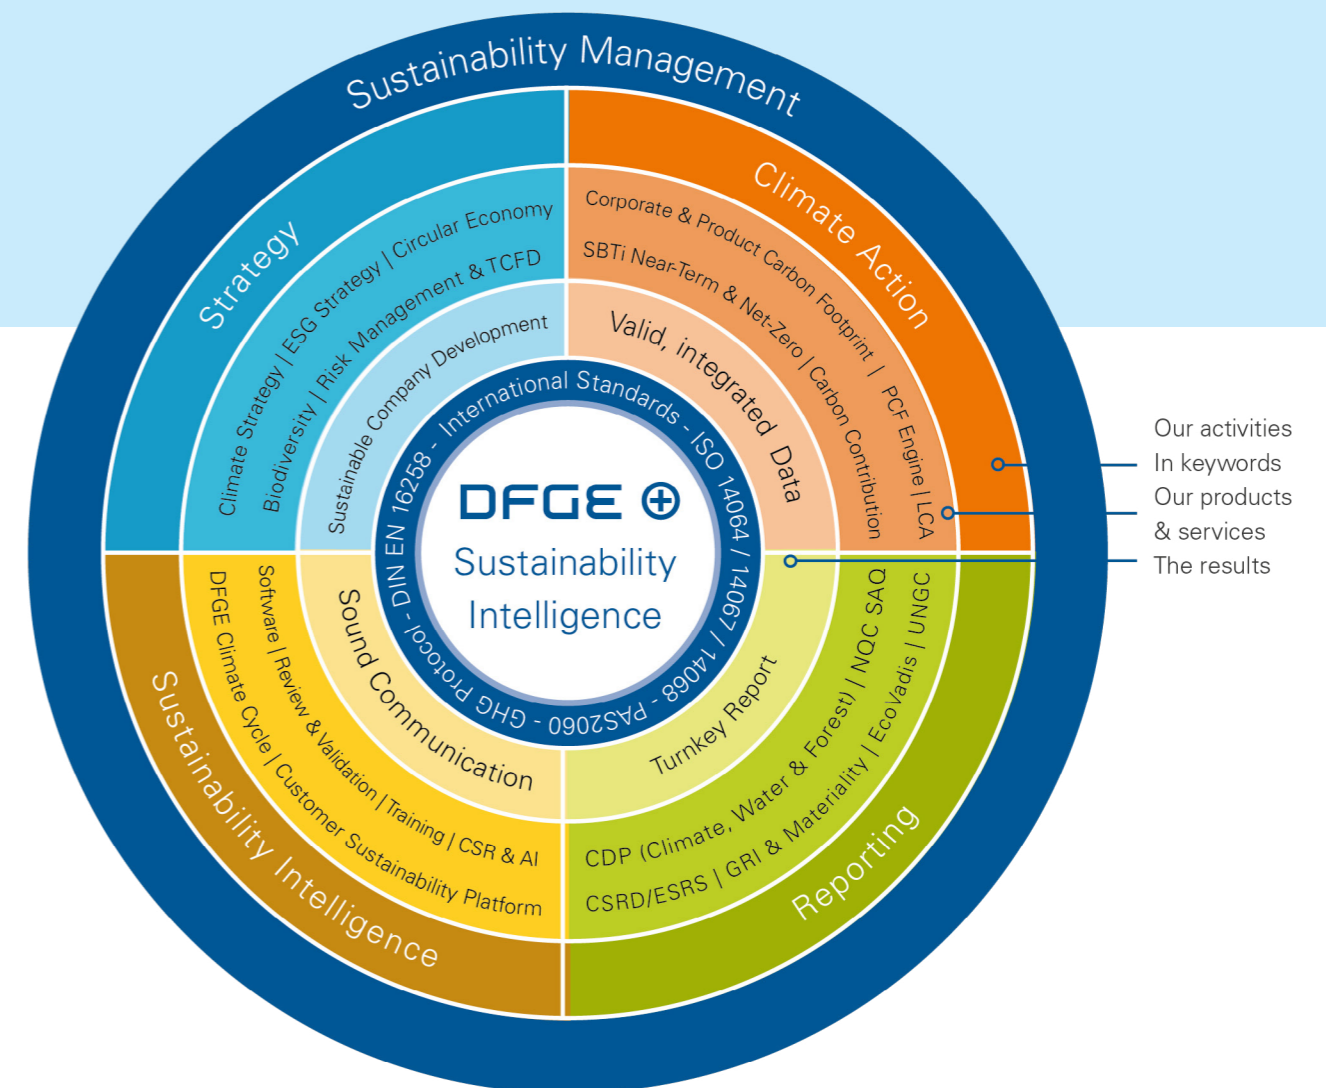

The **DFGE** at a glance

Institute for Energy, Ecology and Economy

At DFGE, we support you in every step of your company's journey towards greater sustainability. Our services range from data collection, calculation and review to reporting and support for external audits by third parties. As a full-service provider and the first Science-Based Targets partner in the DACH region, we can develop a climate strategy for you in a holistic approach, ranging from calculating the carbon footprint to certification and possible offsetting via climate protection projects. Our experts can also help you when it comes to calculating scenarios for achieving the 1.5 degree target.

Our Services

Mastering the challenges with **Sustainability Intelligence**

Scientifically sound

We help you to comply with **current and future** regulations

CLIMATE & EMISSIONS CALCULATION

- Corporate Carbon Footprint (CCF) Scope 1-3
- Product Carbon Footprint (PCF)
- Science Based Targets (SBTi) & Net-Zero
- Carbon-Neutrality
- Life Cycle Assessment (LCA)

CSR & SUSTAINABILITY REPORTS

- CSRD Readiness Check
- CSRD/ESRS Reporting
- UN Global Compact (UNGC)
- Double Materiality
- Global Reporting Initiative (GRI)

SUPPLIER & COMPANY RATINGS

- EcoVadis
- NQC/SAQ
- CDP
- ESG-Ratings

STRATEGY SERVICES & ACTION PLAN

- ESG Strategy
- Climate Strategy
- Biodiversity Strategy
- Circular Economy Strategy
- LkSG-Strategy
- Climate Action Plan / Decarbonization Plan
- TCFD – Climate Risks and Opportunities

Carbon Neutrality Platform

DFGE as the first partner of the CDP for Science Based Targets (SBT) - supports you holistically and according to scientific standards in the field of climate strategy. Starting with the recording of the carbon footprint with the proven DFGE top-down approach, through to carbon reporting and carbon compensation for a carbon product or company. <https://cn.dfge.de/>

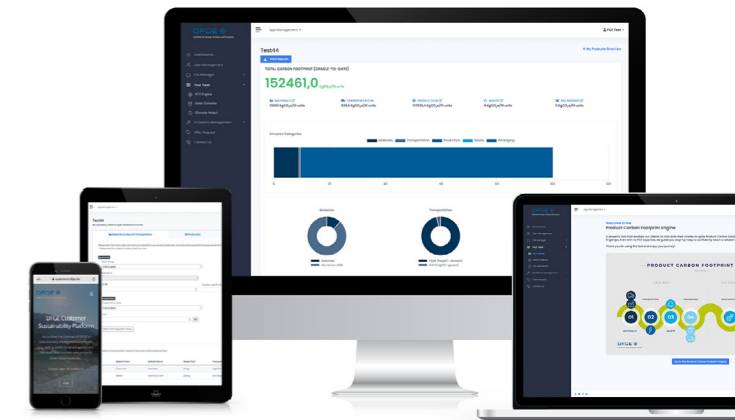

Software & AI

An IT application is always just a tool - it depends on the data, the concept and the processing. We use partner solutions or our own software tools according to your requirements. Individual development with your IT or third-party providers is also possible.

PCF Engine

Our easy-to-use PCF engine calculates cradle-to-gate product carbon footprints and helps your product development to better understand and reduce emissions. Product management benefits from important data for stakeholder information. The PCF Engine provides management with insights and KPIs for the climate strategy. <https://dfge.de/en/pcf-software/>

ESG Questionnaire

Our ESG questionnaire will help you to assess the status quo in your company with regard to the implementation of ESG issues and to identify gaps in your sustainability management. <https://esg.dfge.de/>

What we stand for

What sets us apart

For over
20 Years ...

... with our
customers for
more sustainability

HANDS-ON & NO-CONSULTING

We don't send consultants to your company who first have to learn the ropes.

We work out solutions together with you. We also do the work - and at fixed flat rates, as we know what we are doing thanks to our project experience.

Our support does not end with clever theories, we also help you with the concrete implementation.

NO GREENWASHING

We are focused on your sustainable corporate development, not on greenwashing.

We do not use any tricks and always proceed transparently and in compliance with standards. This means that our calculations and strategies also stand up to critical external auditing by third parties and can be certified.

Sustainability in your company will require change in all areas, and we will support you with our expertise in every detail.

NO GAPS

Sustainability is complex. We are aware of it and can handle it.

With complete and holistic strategies and calculations, whether it is carbon footprints (Scope 3), the selection of the most suitable emission factors or frameworks such as CSRD or biodiversity.

Our understanding of sustainability intelligence closes data gaps and considers the interrelationships in your company.

Experience

Founded in 1999 as a spin-off of the Technical University of Munich, we can look back on over 20 years of experience in the field of sustainability management (calculation, tools and reporting). We were involved with sustainability long before it became a buzzword.

Internationality

All our work is based on internationally recognized standards and methods. We were often involved in the development of these and therefore know how best to apply them.

Scientific Approach

We come from a scientific background; for us, facts and figures are the basis for sustainability. The top-down approach developed by DFGE enables scientific analysis and provides pragmatic, practicable findings and measures.

Partnerships

Close cooperation with committees and organizations ensures our expertise and sound support for your company. We were and are often the first and or only partner of these in the DACH region.

Together

Sustainability affects many players along the value chain in all sectors. Together with our partners, we provide you with the best possible support in your efforts to achieve sustainable business practices.

Successful

200+

Satisfied customers - from SMEs to large corporations

700+

Successful projects

1700+

million tons of CO2e recorded

40%

of DAX companies trust in us
