

# LADONIA FOSSIL PARK RELOCATION

Fossil hunting on the North Sulphur River will be available at a temporary park off FM 2990 mid to late June, 2021. The Ladonia Fossil Park on State Highway 34 a few miles north of Ladonia is closing to allow for the construction of Lake Ralph Hall. The new reservoir will provide a safe, reliable water supply to North Texas communities. A new, permanent fossil park will be built after the lake is complete.

## TEMPORARY LADONIA FOSSIL PARK

**TEMPORARY FOSSIL PARK** Upper Trinity Regional Water District (UTRWD) is constructing a temporary park to provide fossil hunters with access to the North Sulphur River while Lake Ralph Hall is under construction.

**When:** Anticipated June 2021.

**Where:** East side of FM 2990 and north side of the North Sulphur River. Follow the signs to the temporary park.

**FUTURE, PERMANENT PARK** UTRWD recognizes the importance of the fossil park to local community and visitors alike. UTRWD and the City of Ladonia are working with local leaders to select another spot where fossil hunters can continue to easily access the river bottom after the new reservoir is built. By offering access to a different location on the river, the temporary and future parks will provide opportunities for additional and untapped fossil discoveries.

**FOSSIL FINDS** *UTRWD will be working with paleontologists from the Perot Museum to preserve significant fossils should any be found during reservoir construction.*
