Digestive Support

Supports digestion & relieves the stomach
Prebiotics & probiotics

DIGESTIVE SUPPORT

Does your horse have to endure major changes in feed rations, e.g., moving from pasture to stable feed? Loss of appetite, grinding teeth, repeated yawning, etc. In short, is your horse's condition falling behind, or do you want extra support to aid digestion in the gastrointestinal tract? Discover the Digestive Support from the Special Care range.

Digestive Support is a dietary supplement that supports digestion. It is specially designed to regulate digestion and optimise intestinal flora.

- **Lithothamnium** is oceanic calcareous algae. Due to the unique structure of this calcareous algae, minerals such as calcium and magnesium are slowly released in the stomach. This reduces fluctuations of acidity in the stomach and contributes to a healthy stomach wall.
- Chicory has a **probiotic** effect thanks to the inulin it contains. Inulin is a nutrient that aids the growth of good intestinal bacteria.
- The added **probiotic** is a specific strain of lactobacilli that helps maintain the natural balance of the intestinal flora.

The above components work together to optimise the intestinal flora of the horse, supporting good digestion in the intestines.

INSTRUCTIONS:

Recommended dosage: 40 grams per 100 kg of body weight of the horse per day. Ideally given with concentrated feed.

After changing the ration, or if the aforementioned behaviour is noticed, give for at least 14 days.

COMPOSITION:

wheat flour, maize, chicory roots powder, maerl, dextrose, extruded maize, cane molasses, soybeanmeal feed, wheat bran, Corn oil, calcium carbonate, fermented milk products

Analytische Bestandteile:

Crude Protein	9,4 %
Crude Fat	4,6 %
Crude Fibre	1,8 %
Crude Ash	11,9 %
Starch	36 %
Sugar	12 %
Calcium	3,21 %
Phosphor	0,22 %
Magnesium	0,65 %
Natrium	0,16 %

Sensorische Zusatzstoffe (/kg):

Mixture of aromatic substances (Hay)	0,5g
