

Differentiate your practice and support case starts with Invisalign® Outcome Simulator Pro.

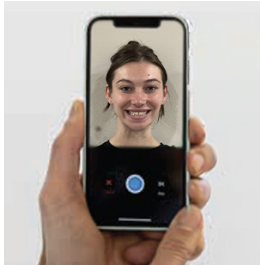

In-face
video
simulations

A powerful tool designed to drive patient engagement and Invisalign® treatment acceptance, the Invisalign® Outcome Simulator Pro delivers highly realistic, simulated in-face visualizations of your patient's potential future smile.

Now with the **Invisalign® Smile Video** and **advanced customization tools**, it enables tailored, dynamic in-face simulations that can help foster emotional engagement and facilitate patient conversations.

How it works

1

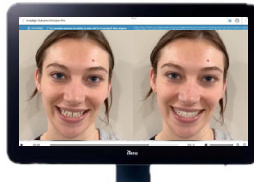

Capture wide smile photo and video with Invisalign® Practice App.

2

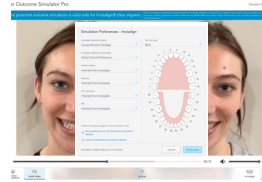

Scan the patient, then open Invisalign® Outcome Simulator Pro.

3

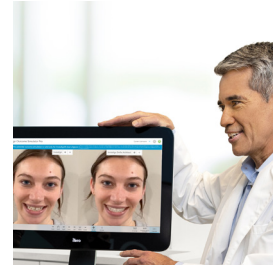

Visualize ortho treatment with natural smile motion via Invisalign® Smile Video.

4

Apply personalized preferences to customize your simulation.

Guide patients through their smile transformation.

Features

Invisalign® Smile Video

Offer cutting-edge, in-face video simulation with natural mouth movements to showcase patients' potential smile transformation.

Advanced personalization

Customize simulations with Invisalign® Personalized Plan and advanced tools like IPR, A/P correction, and Arch Control. Now also view simulations with Occlusogram.

Expanded Invisalign® product selections

Choose from a broader range of Invisalign® product options – including Lite, Express, Moderate and Comprehensive – in order to design a precise simulation.

Key benefits

Take patient engagement to the next level

Realistic, dynamic in-face video simulations that help effectively communicate Invisalign® treatment options, making it easier for patients to envision their potential future smile.

Elevate chairside consultations

Leverage Invisalign® tools to generate high-quality simulations, and apply your personal, preferred template to standardize treatment simulations across patients.

Enhance practice efficiency

Streamline the workflow with fewer steps¹ using Invisalign® Practice App integration – enabling simulations in just minutes.

1. 98% of surveyed doctors agree that photo capture with Invisalign Practice App requires fewer steps than DSLR camera. Photo capture with Invisalign Practice App was previously known as Invisalign Photo Uploader. Based on survey data of Invisalign providers in NA, who have used Invisalign Photo Uploader (n=524; where GP=496, Ortho=28) with a minimum of 5 patient creation sessions, who were asked to answer the question – "Do you agree or disagree that Invisalign Photo Uploader requires fewer steps than conventional method (which includes using a DSLR camera) to manage and capture patient records for Invisalign submission?" Data on file at Align Technology, as of April 20, 2022.
