Our bodies are made up of trillions of cells. Each cell has an instruction manual called DNA, which tells the cell how to grow. Sometimes the DNA in our cells gets damaged or mutated, causing cells to grow out of control. Cancer is a disease caused by this out-of-control growth.

Usually, our natural immune system can stop abnormal cell growth before problems happen. But when it doesn’t, cells keep growing to form tumors.

**TREATMENT OPTIONS:**

- **Chemotherapy** tries to kill any fast growing cells — sometimes killing healthy cells in the process.
- **Targeted Therapy** may stop the growth of cancer cells by targeting specific mutations in a tumor.
- **Immunotherapy** helps your body’s own natural immune system find cancer cells and kill them.

---

**Every Cancer is Unique**

Our bodies are made up of trillions of cells. Each cell has an instruction manual called DNA, which tells the cell how to grow. Sometimes the DNA in our cells gets damaged or mutated, causing cells to grow out of control. Cancer is a disease caused by this out-of-control growth.

Usually, our natural immune system can stop abnormal cell growth before problems happen. But when it doesn’t, cells keep growing to form tumors.

**ASK YOUR DOCTOR WHICH TEST IS BEST FOR YOU:**

- **FoundationOne®CDx**
- **FoundationOne®Liquid**
- **FoundationOne®Heme**

---

**STARTING A CONVERSATION**

Talking with your doctor about comprehensive genomic profiling with Foundation Medicine may help lead you to the personalized care you deserve.

FoundationOne CDx is a test intended to help doctors identify which cancer patients may benefit from certain treatments or clinical trial options. Use of the test does not guarantee that you will be matched to a treatment or clinical trial, or that all relevant alterations will be detected. Some patients may require a biopsy, which could pose a risk. For the full labeling, including indications for use and safety information, visit our website at www.startwithstepone.com

---

Foundation Medicine offers comprehensive genomic profiling for all types of advanced cancer.

STARTING A CONVERSATION

Talking with your doctor about comprehensive genomic profiling with Foundation Medicine may help lead you to the personalized care you deserve.

FoundationOne CDx is the only FDA-approved in vitro diagnostic test by Foundation Medicine. FoundationOne Liquid and FoundationOne Heme were developed and their performance characteristics determined by Foundation Medicine. They have not been cleared or approved by the U.S. Food and Drug Administration. For more information on our laboratory developed tests (LDTs) please see their respective Technical Specifications at http://www.foundationmedicine.com
If you are a Medicare patient, Foundation Medicine testing may be covered for qualifying patients.

If you have private insurance, Foundation Medicine will work directly with your insurance company to try to obtain coverage and handle necessary appeals.

If you are uninsured or concerned about the out-of-pocket cost of testing, financial assistance may be available for qualifying patients.

You can fill out the financial assistance application at any time before, during, or after testing at www.foundationmedicine.com/aid.

Our financial support services are designed to make comprehensive genomic profiling accessible to patients regardless of their financial situation.

You may have questions...

- If you are a Medicare patient, Foundation Medicine testing may be covered for qualifying patients.
- If you have private insurance, Foundation Medicine will work directly with your insurance company to try to obtain coverage and handle necessary appeals.
- If you are uninsured or concerned about the out-of-pocket cost of testing, financial assistance may be available for qualifying patients.
- You can fill out the financial assistance application at any time before, during, or after testing at www.foundationmedicine.com/aid.

*Qualifying Medicare and Medicare Advantage members have coverage of FoundationOne CDx in accordance with the Centers for Medicare and Medicaid Services (CMS) national coverage determination (NCD) criteria.
