

Every product and service developed for Remedy's Enterprise Solution clients is tailored to the client's specific needs and goals. Our creative, unique, and innovative solutions for the healthcare industry have resulted in lower costs while achieving better health for patients. Some of America's most prestigious hospitals, device makers, telehealth players, and clinical-trial healthcare agencies have chosen Remedy for significant, multi-year projects.

HERE IS A SAMPLING OF PRODUCTS AND SERVICES DEVELOPED FOR ENTERPRISE SOLUTION CLIENTS:

Adherence and Patient Recruitment Solutions

Custom Healthcare IT Development:

Creation and implementation of healthcare IT programs that focus on engaging and/or recruiting highly specific patient populations for the nation's top healthcare providers

HealthCommunities Provider Services:

Online services for healthcare providers designed to improve patient outcomes and generate operational efficiency in the practice—including website design, content development, online marketing, and professional forums

Cutting-edge tools that facilitate professional collaboration and provide patient wellness and condition education to promote treatment adherence

Greater online visibility via providers' connection to Remedy's network of award-winning content, consumer products, and platforms

Healthcare Provider Online Services

Online Tool Development

Telehealth System Development:

Web-enabling a legacy hardware-based telehealth system for a leading global electronics manufacturer

Patient Triage Platform:

Development of a unique triage platform to automate patients' appointment-making process, minimize inefficiency, and improve the standard of care for a leading U.S. hospital

Physician Referral Tool:

Creation and implementation of a secure, HIPAA-compliant, online geo-targeted patient referral service platform

Allows oncology healthcare providers to find fertility preservation services in their patient's area prior to having treatment

Focused specifically on the needs of the patient seeking fertility preservation

Health Tracker:

Patient-friendly, easy-to-use mobile tool that helps patients assess, record, and communicate their mood every day to their physicians and trusted loved ones

Consolidates all care-related communications via a web portal and the patient's mobile device

In-app ability to send a daily text message to users prompting them to report their mood

Option to include explanatory notes in their secure web-based personal electronic mood chart, which can be reviewed by care providers in real time

Allows doctors to proactively respond to changes by the patient and together have a more productive conversation about treatment options
