

Launch of ESSEC APAC Solar Panels Project

We are thrilled to announce a milestone in our journey toward sustainability and environmental stewardship. Our rooftop is now home to a state-of-the-art solar panels project, inaugurated by **Vincenzo Vinzi**, Dean and President of ESSEC in 2023.

At peak capacity, our new solar panel system can produce 41.6 Kilowatts of electricity per hour. Annually, it is expected to generate 3 - 6% of our energy consumption while cutting our carbon emissions by 15.6 tons.

A [visual journey](#) of the solar panels' installation has been compiled to celebrate this accomplishment, capturing the meticulous process of bringing this sustainable vision to life.

A big thank you to all who have supported this project. Together, let's power progress for a better tomorrow.
