

FBN[®] CLETHODIM 240

Contains clethodim, the active ingredient in Centurion[®] and Select[®]

OVERVIEW

Selective post-emergent control of a broad range of grassy weeds including wild oats, green foxtail, volunteer barley, wheat and oats in oilseeds, pulses, and soybeans.

KEY CROPS

Brown & Yellow mustard | Canola
Chickpeas | Dry beans | Field peas | Flax
Lentils | Potatoes | Seedling alfalfa |
Soybeans | Sunflowers

PACKAGING

3 + 9 L Case (Co-Packs Tab)

PRODUCT SPECIFICATIONS

ACTIVE INGREDIENT

Clethodim

RATES

25-152 ml/Ac

WEED SPECTRUM

Selective post-emergent herbicide for control of a broad range of grassy weeds in canola and other listed crops on the label.

Technical Use Guidelines

Mode of Action	<ul style="list-style-type: none"> Group 1
Crop Rotation	<ul style="list-style-type: none"> No re-cropping restrictions after 30 days of spraying
Adjuvant Recommendation	<ul style="list-style-type: none"> WOC Clethodim Adjuvant
Rainfastness	<ul style="list-style-type: none"> Rainfast in 1 hour
Water Volume	<ul style="list-style-type: none"> Minimum 5 US gal/Acre. Water volume will depend on tankmix partner
Application Tips	<ul style="list-style-type: none"> A surfactant is required Add clethodim surfactant (Included in the case) at 0.5%

It is your responsibility to confirm prior to purchase and use that a product is labeled for your specific purposes, including, but not limited to, your target crop or pest and its compatibility with other products in a tank mix and that the usage of a product is otherwise consistent with federal, provincial and local laws. We reserve the right to restrict sales on a geographic basis in our sole discretion. You must have a valid applicator license and/or be a certified farmer, to use restricted and commercial pest control products (exceptions may apply based on province). Please consult your applicable provincial authority for complete rules and regulations on licensing, use, and recording keeping requirements of restricted and commercial pest control products.

FBN[®] CLETHODIM 240

Contains clethodim, the active ingredient in Centurion[®] and Select[®]

CROP STAGING

- *FBN* Clethodim 240 is a systemic herbicide which is translocated from the treated foliage to the growing points of the leaves, shoots and roots. Uptake into the plant is primarily through the leaves. Thorough coverage of the foliage is important for consistent grass control.
- Susceptible grasses that are actively growing will undergo a burn-back and colour change after treatment. Leaf foliage will first change from green to yellowish, then purplish and finally brown colour.
- The time required for complete control is normally 7 to 21 days following treatment, depending on growing conditions and crop competition.
- Apply *FBN* Clethodim 240 when the annual grasses and volunteer cereals are in the 2 to 6 leaf stage as specified under Application Rates of *FBN* Clethodim 240. Most effective control is achieved when application is made prior to tillering when annual grasses are small and actively growing.
- For suppression or control of quackgrass, apply *FBN* Clethodim 240 when the quackgrass is in the 2 to 6 leaf stage and 6 to 15 cm in height. Most effective results are achieved when application is made at the 3 to 5 leaf stage, when the canopy is uniform and actively growing.
- *FBN* Clethodim 240 will be less effective when plants are stressed by lack of moisture, excessive moisture, low-temperature and/or very low relative humidity. Regrowth by tillering may occur if application is made under any of the above stress conditions.

MIXING PROCEDURE

SPECIAL MIXING ORDER WITH GLUFOSINATE AMMONIUM

1. Fill tank half full of water
2. Start agitation
3. Add required amount of surfactant
4. Add *FBN* Clethodim 240
5. Add Glufosinate Ammonium
6. Continue agitation and fill tank with water
