

CONTROL YOUR TRANSFORMATION

Introduction

Did you know that hormones play the most powerful role in body transformation? When hormone imbalance exists, you notice excess weight gain, increased appetite, bloating, and lower energy, that's why the key components in TRi-M*L*T™ focus on the three primary body transformation hormones – Leptin, Ghrelin, and PYY to support your metabolic, lipotropic, and thermogenic transformation.

This convenient liquid shot is your on-the-go solution for hormone-targeted weight management.

When it comes to achieving your body transformation and weight loss goals - aging, diet, lifestyle, exercise regimen, and sleep, play integral roles in your success. As you age, maintaining all of these becomes more difficult. Now is the time for your supplements to match your dedication and desire. Many people struggle to achieve their goals in terms of diet, workout, or physique. Imagine having access to the finest transformation solution available, which can support your hormones, diet goals, lifestyle, and energy levels to enhance your confidence and results like never before.

Introducing TRi-M*L*T™, New U Life's hormone-supported weight management solution.

TRi-M*L*T™ is an effective, powerful, and unique weight management tool that leverages clinically studied ingredients to help you combat overpowering cravings and take your workouts to the next level. Whether your goal is to control cravings, shed body fat, or optimize your metabolism, this hormone-targeted weight management liquid shot is the catalyst you need to reach your goals!

Control your transformation with TRi-M*L*T!

Key Ingredients in TRi-M*L*T™ may:

- Support healthy Leptin, Ghrelin, and PYY
- Suppress appetite to reduce caloric intake
- Promote hormone-supported weight management
- Decrease body fat and improve body composition
- Promote emotional and mental support
- Reduce fat absorption
- Boost energy and support metabolism

What Makes TRi-M*L*T™ Unique?

TRi-M*L*T™ incorporates the acronym "TRi," representing the three primary hormones supported by the product - Leptin, Ghrelin, and PYY, which play a crucial role in facilitating body transformation. Within TRi-M*L*T, the essential ingredients that drive hormone support in the formula collectively represent SomaTech®. SomaTech is New U Life's one-of-a-kind scientific approach that includes research and development, key ingredient blends, and products that address hormone imbalances that lead to unwanted aging.

The three SomaTech supported target hormones are:

PYY

PYY enhances the body's utilization of fat stores for energy, reducing fatigue during exercise and supporting optimal performance during high-intensity workouts. It also increases ketones, improves cognition, reduces appetite, and enhances muscle protection.

Leptin

Leptin is an appetite suppressant - a hormone your adipose tissue (body fat) releases that helps your body maintain a healthy weight on a long-term basis. It does this by regulating hunger by providing the sensation of satiety.

Ghrelin

Ghrelin, known as "The Hunger Hormone," stimulates appetite by increasing when the stomach is empty and decreasing after a meal, leading to consuming more food, calories, and fat storage. TRi-M*L*T's key ingredients like CitriSlim, Inulin, and Fucoxanthin work to decrease ghrelin levels, promoting long-term satiety.

By supporting these three hormones in TRi-M*L*T, not only can you get the most out of every workout, but you can significantly speed up the results of your body transformation. Whether you're trying to trim down for better body composition or looking to fit into your old clothes - these three hormones will help you get where you want to be!

How Does TRi-M*L*T Support Metabolic, Lipotropic, and Thermogenic?

TRi-M*L*T harnesses the power of its key ingredients, including Ponkan Fruit Extract, Green Tea, Chromium, and Tyrosine, to comprehensively support metabolic, lipotropic, and thermogenic functions. Ponkan Fruit Extract contributes to enhanced metabolic efficiency, while Green Tea amplifies both metabolic and thermogenic processes. Chromium targets lipotropic functions, aiding in the breakdown of fats. Additionally, Tyrosine plays a crucial role in supporting metabolic activities. Together, these elements form a potent blend, optimizing multiple facets of the body's energy regulation and weight management systems.

Metabolic

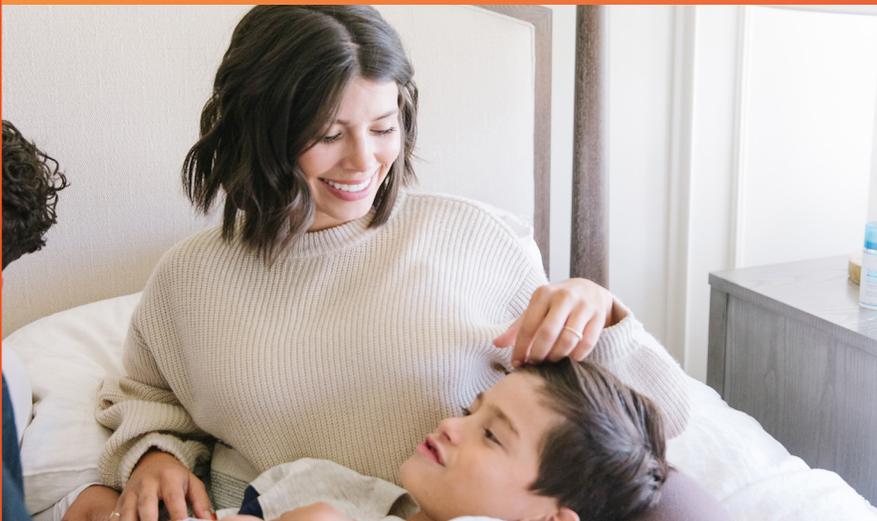

The term metabolic is often used to refer specifically to the breakdown of food and its transformation into energy. Metabolism consists of anabolism (the buildup of substances) and catabolism (the breakdown of substances).

Lipotropic

A lipotropic nutrient promotes or encourages the export of fat from the liver. Lipotropics are necessary for maintaining a healthy liver, and for burning the exported fat for additional energy. Without lipotropics, fats and bile can become trapped in the liver, causing severe problems like blocking your fat metabolism.

Thermogenic

A thermogenic supplement simply accelerates metabolic functions. Thermogenic supplements contain active ingredients to make these metabolic functions happen. They are also often combined with secondary ingredients to help you achieve your goals.

Additional Benefits:

Flavors and Supplement Facts: Citrus Burst

Who Can Use This Product?

Anyone age 18 or older who is looking to support increased energy, weight management and appetite control. People under the age of 18 should not use this product.
