

# Accelerate Test Velocity and Quality with saucectl

saucectl is a feature within the Sauce Labs infrastructure that allows for the use of any automation frameworks rather than just Selenium. saucectl gives testing teams the flexibility to use their preferred automation frameworks for any part of the test cycle on the same platform, having all of the test results and breadth of coverage in one place.

Using saucectl gives teams the ability to have one testing platform that accommodates all frameworks to have a holistic view of all of how tests are performing.

It's difficult to pick out the right automated framework and what platform to test it on which is why we have pulled together a breakdown of each framework's capabilities and compared it to saucectl and the Sauce platform.

## Cypress

CAPABILITY	CYPRESS PRODUCT	SAUCE LABS
Execute tests in parallel	Yes (Paid)	Included with any package
View Test Results	Yes (Paid)	Included with any package
Cost	<a href="#">Pay per result</a> + User + CI cost to execute these tests	Concurrency (Viewing of tests is included as part of the plan)
Users	Limited users based on plan type	No users fees
Collaboration	Limited to Cypress framework	Multi-framework support
Flakey test detection	Limited to higher plans	Included in any package
Execute test on Docker or VMs	Need an execution environment like CI to run test which costs extra	Included in any package

## Playwright OSS

CAPABILITY	PLAYWRIGHT OSS	SAUCE LABS
Execute tests in parallel	Yes	Included with any package
View Test Results	No – Provides HTML files for each execution	Included with any package
View Test Results across runs	No	Included with any package
Cost	CI cost to execute these tests	Concurrency (Viewing of tests is included as part of the plan)
Execute on VM or Docker containers	Need an execution environment like CI to run test which costs extra	Multi-framework support
Users	No users fees	No users fees
Collaboration	Limited to Playwright framework	Multi-framework support
Flakey test detection	Limited	Included in any package

Saucectl helps software testing teams test earlier in the development life cycle to speed up delivery and increase product quality. Visit the Sauce Labs website to learn more about saucectl.
