

# Sauce Orchestrate

## Fast and reliable test orchestration for mobile and web apps, at scale

Sauce Orchestrate is a new and unique approach to web and mobile application testing that increases test execution speed and enables end-to-end test orchestration.

## Transform Mobile and Browser Testing for Accelerated Time to Market

### Test up to 70% faster, from anywhere

Sauce Orchestrate decreases network overhead and reduces the latency between the test and the device or browser.

### Reduce costs and optimize CI/CD pipelines

Orchestrate multiple CI builds and reduce the maintenance burden on your resource-constrained CI by offloading the compute cycles to Sauce Labs for test execution.

### Accelerate development velocity

Improve development velocity and significantly reduce feedback time by running the same test suite locally early in the development cycle, and at scale in your CI.

### Improve reliability

Reduce unpredictable network issues and help developers focus their time on innovation by eliminating the need to troubleshoot errors caused by the heavy network overhead of a remote grid.

## Seamless and Streamlined Developer Experience

Sauce Orchestrate provides purpose-built capabilities designed to increase the speed and efficiency of app development and testing.

### Faster feedback loops

Significantly shortens browser and mobile testing feedback time so developers can make data-driven decisions that improve and innovate.

### Simplified testing

Simplifies the packaging of Appium and Selenium test code using container technology and the Sauce Labs grid.

### Any framework, any language

Works with any programming language and test automation framework available in Sauce Labs.

### Robust command line interface

Fully integrates with the saucedctl CLI for configuring test orchestration from YAML files.

# Foundation for Efficient Test Orchestration, at Scale

## Mobile & browser testing

Run mobile and web app tests on any device or browser, and in any language and test automation framework available in Sauce Labs.

## Integrates with CI

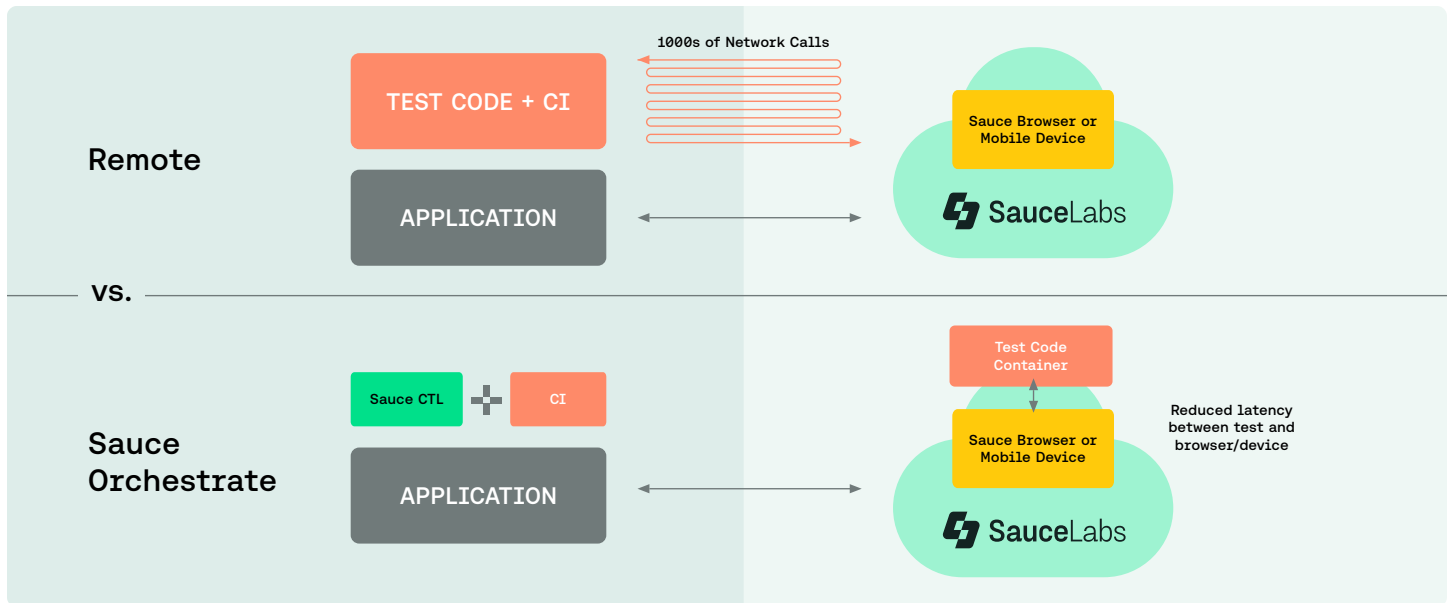

Integrates with your CI pipelines through our developer-friendly command line interface (sauceCTL) or a simple API.

## Built on Docker

Integrates with any Docker registry for packaging test codes into a Docker image. Simply send the package to Sauce Labs for execution within our ready-to-go grid.

## Rich test results

Detailed debugging information (execution logs) and test results can be accessed through our purpose-built UI and API.

## Enterprise-Level Security and Support

### Security and compliance

Security is priority #1 at Sauce Labs. Hundreds of engineering and product teams trust us to keep their projects safe. We offer robust encryption and complete data privacy to secure your investment. We're SOC 2 Type 2, ISO 27001, and ISO 27701 certified, and GDPR and CCPA compliant.

### World-class support

We offer tiered levels of support to match business needs and budgets. Our global team of highly experienced support engineers helps customers resolve issues and get back on track quickly.

### Test automation experts

Sauce Labs Customer Success managers and Solution Architects are your guides on the continuous testing journey. As founders and active participants in the testing community, our experts help teams find solutions to their biggest challenges.
