

Security and compliance continue to be top priorities for businesses with a digital presence.

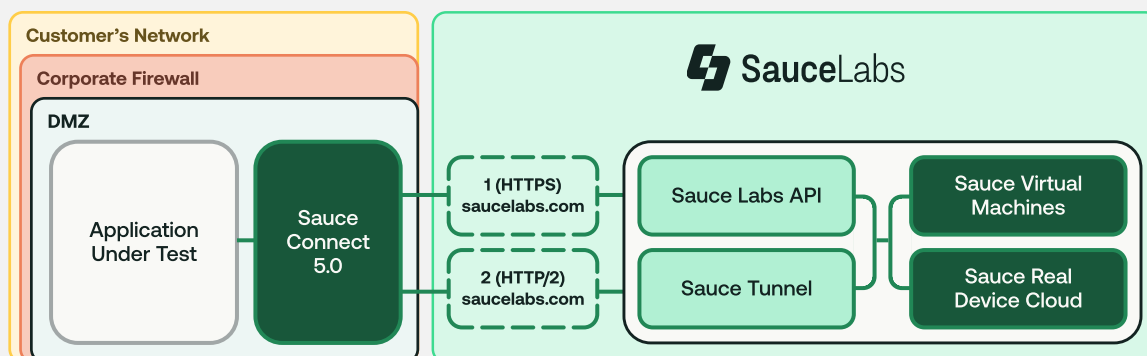

Protecting your digital assets is more important than ever, so an increased focus on security applies not only to software delivery but also to the vital task of testing websites and mobile apps to drive a quality and trusted user experience.

To do this effectively, you require proven and efficient security protocols and a high-performing and scalable infrastructure. Whether running tests on virtual or real device clouds, it's common to require a secure connection to software behind a corporate firewall or in your local environment. And, of course, you want to run these tests quickly and with minimal hassle.

Building upon Sauce Labs' impressive 13+ years of experience, we are bringing secure testing to the next level. Sauce Connect has always been a foundational element of our platform, providing a crucial layer of connectivity and testing security. As industry standards and practices evolve, so do we. We've taken an innovative approach to secure testing with Sauce Connect 5 that can enhance your testing performance using industry-standard protocols and streamline the developer experience using package-managed installation.

Sauce Connect 5.0

Sauce Connect 5.0 is the next chapter of highly secure and performant testing. Sauce Connect 5.0 unlocks enhanced performance, advanced security protocols, and simplified integration and onboarding.

Enhanced Performance

Improved testing performance with up to 5x improvement in performance and 50x less memory requirements.

Advanced Security

Non-proprietary HTTP/2 protocol with SOCKS5 proxy support, simplifying security approvals & implementation.

Simplified Integration and Onboarding

Fewer steps simplify the onboarding, and integration into CI/CD environments enables secure testing with minimal support required.

Improvements Over Sauce Connect 4.0

Sauce Connect 5.0 is a significant upgrade from its predecessor, Sauce Connect 4, offering substantial improvements in both security and performance.

As mentioned, Sauce Connect 5.0 now uses the standard HTTP/2 protocol, which helps teams avoid common security approval roadblocks. It also provides industry-leading performance insights through a Prometheus metrics dashboard, –available in the Grafana marketplace.

Get Started with Sauce Connect 5.0

With Sauce Connect 5.0, we're enhancing your testing experience across security, performance, and implementation.

The migration process is simple.

You can have Sauce Connect 5.0 up and running in minutes. Visit the [installation documentation](#) to get started today.

Extensive Integrations and Frameworks

Jenkins
