

Sauce Labs Mobile App Distribution

Powered by **TestFairy**

Streamline mobile app distribution and deliver better mobile apps in shorter development cycles.

With Mobile App Distribution & Beta Testing as part of the Sauce Labs Platform for Test, you can leverage the most comprehensive mobile testing solution. This enables enterprises in the modern era of DevOps to maximize coverage from pre-production to production, seamlessly connecting the customer experience to end-to-end testing.

ACHIEVE QUALITY AT SPEED ACROSS THE MOBILE APP DEVELOPMENT LIFE CYCLE

Development • Integration • Production

Real and Virtual Device Testing

Mobile App Distribution & Beta Testing

Error & Crash Reporting

Shorten Development Cycle, Improve Testing Efficiency, And Reduce Risks

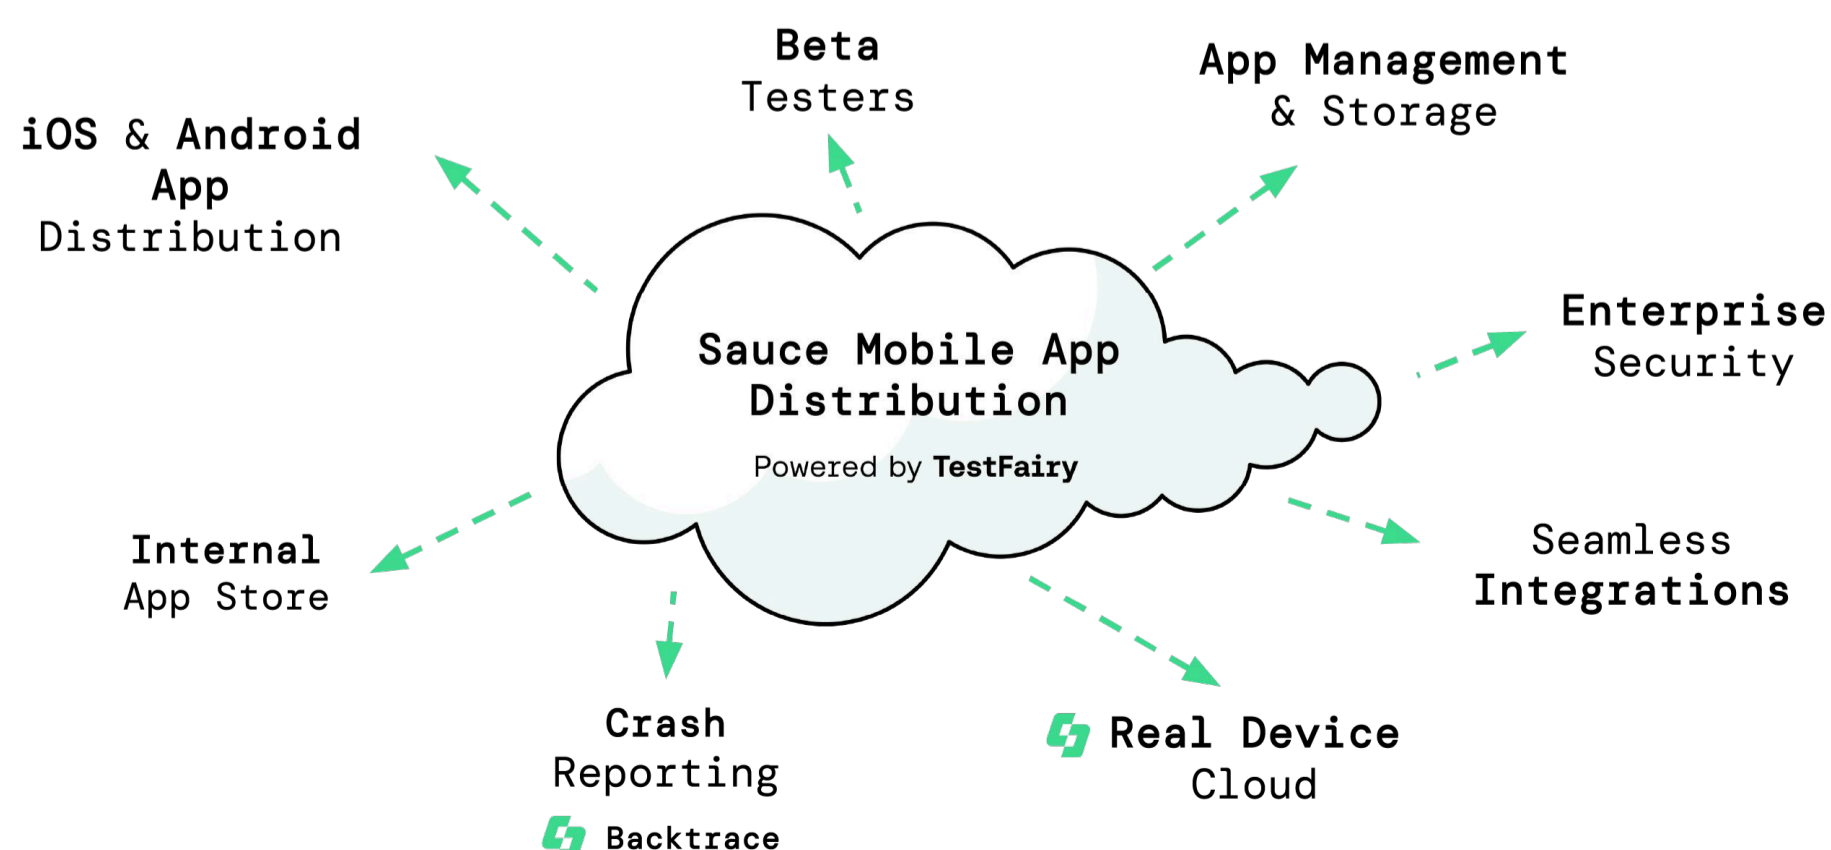

Efficient mobile app distribution is essential for effective beta testing, allowing the integration of real user feedback to speed up app development and iterations, resulting in faster Android and iOS app releases.

Controlled App Distribution: Leverage our all-in-one iOS and Android platform for highly configurable, secure app distribution that ensures the right users get access to the correct app versions, and that they test the correct app/builds.

Advanced Security & Compliance: Meet your corporate compliance requirements and ensure security with industry-leading features and certifications including SOC 2 Type II, ISO 27001, and ISO 27701 which are critical for enterprises.

Enterprise-grade Scale and Reliability: Support for up to a million builds and large scale of unique apps with an optimal user experience. Benefit from high reliability with our solid track record of uptime and rapid issue resolution.

Seamless Integrations: Seamless integration with CI/CD tools (Fastlane), issue and ticket management systems (Jira, Zendesk, Trello, other), and communication tools (Microsoft Teams, Slack), and more!

Streamlined Mobile App Distribution

Continuous Delivery

Configure everything through our APIs. We integrate seamlessly with various CI/CD tools- Fastlane, Jenkins, TeamCity, CircleCI, Bamboo, and GitHub Actions. Once ready, your app is automatically uploaded to Sauce Labs (TestFairy) and is distributed to users based on your API configuration.

Internal App Store

Simplify app management with intuitive web and mobile interfaces, allowing authorized users to download and install apps easily. Users can search for specific versions by name, version, tags, and mark favorites.

Beta Testers

Effortlessly store and upload your apps for distribution. Achieve app distribution at scale to both internal (including developers, QA, product managers, product owners, and designers) and external beta testers (including paid testers, crowd testing, and others).

Email Notifications

Customize email templates in Sauce Labs to match your brand's look and feel. Users receive automatic notifications of new versions, with messages sent from your designated email address.

Landing Pages

Every app uploaded to Sauce Mobile Beta Testing receives an auto-generated landing page. This page is fully customizable, supporting flexible security rules from open beta to closed groups based on permissions and Single Sign-On credentials.

Enterprise-Grade Security

Private Cloud

Available for enterprises in a Private Cloud architecture:

- Single tenant database
- Dedicated firewall
- VPN access
- SSO

Private Storage

Get the ability to choose any "S3-compliant" provider for securely storing your assets within your own infrastructure. This includes any apps you want to store or distribute.

Configurable Retention

Customize the duration of your binaries and builds.

Enable your specific data management, or data retention policies you need to be aligned within your org.

(14-30-60-90-180-365 days)

Integrations

Enforce corporate security policies with Single Sign-on integration.

Get support for SAML and full compatibility with Okta, OneLogin, Ping, Oracle, IBM, and Azure AD.

Audit Logs

Benefit from detailed Audit logs to understand who logged in, uploaded, and downloaded the apps. Get configurable webhooks for custom security implementation.

"Our productivity has gone up by 5X since we started using TestFairy"

Matt Helmer, Mobile Product Manager at Groupon
