

Case Study

Foundation Medicine & Optimal partnership enables speedy clinical trial enrollment

This partnership allowed us to coordinate all required steps for activation of a Just In Time trial site for a patient with a rare NSCLC biomarker, allowing for the **patient to enroll and receive the study drug within 12 business days** of trial site discussion with provider.

Benefits for Biopharma Partners

- Our patient identification service, Precision Enrollment, utilizes its broad commercial testing network to **identify patients who meet specific, genomic eligibility criteria** for a trial.
- Optimal's site activation methodology, **Just In Time**, allows for site identification and activation to be completed within a **quick two-week turnaround**.
- Targeted screening and site activation methodology bring **efficiencies in both patient identification and site management** efforts.

Benefits for Healthcare Providers & Their Patients

- Patients can **now be identified for trials that were previously unavailable** to them due to geographical constraints.
- With successful patient matching, the clinical trial can be delivered to the patient in time to **fit within their treatment regimen**.
- Patient matching provides **additional screening support** for trial sites.

Just In Time site activation methodology decreases research overhead costs, allowing trial sites to invest time and effort into only those trials where they enroll a patient.
