

# Build Better Clouds

Spirent Cloud solutions help validate your cloud infrastructure performance, ensuring that hosted applications are allocated sufficient resources to deliver the high-quality experience end users expect.

We help you:

- ✓ **Assure cloud infrastructure**
- ✓ **Migrate workloads to the cloud successfully**
- ✓ **Get visibility into cloud resource utilization**

# Spirent helps you build a better Cloud

**Cloud Infrastructure Assurance:** understand infrastructure performance and ensure it delivers expected quality of experience.

Spirent helps you determine whether your chosen infrastructure can handle the applications and services targeted for those systems. Gain valuable negotiating power with suppliers based on performance characterization and ensure your infrastructure will meet your business needs.

**Workload Migration:** move applications and services to the cloud with confidence.

Spirent helps you move beyond a spreadsheet formula for anticipating demand. We recreate your workloads at scale to measure capacity and the impact it has on your Cloud. Gain valuable insight into what dimension—Memory, Disk I/O, CPU or Network—is struggling, making sure the right amount of infrastructure is purchased, potentially saving millions in server, network and storage costs due to over-provisioning.

**Cloud Visibility:** gain actionable insight into poor performance.

Spirent helps you visualize the differences of making software, hardware or network changes to your Cloud by establishing a baseline and running regular health checks. Our comprehensive analysis will allow you to pinpoint shortcomings, defects, and misconfigurations so the right resources can be deployed quickly and effectively.
