

WI-FI NETWORKING TURN UP

Leveraging decades of experience supporting complex testing and assurance needs, Spirent offers comprehensive Wi-Fi turn up services and solutions to help improve and optimize Wi-Fi performance and to service the diverse needs of airport Wi-Fi networks to ensure committed Quality of Experience (QoE) or Quality of Service (QoS) to end users.

Services include:

- Technology and product selection based on business requirements
- Network planning/analysis and management
- Pre and post launch testing
- Data collection, analysis and recommendation
- Service assurance

NEWEST CONNECTED AIRPORT

Spirent worked with <u>Beijing Daxing</u> <u>International Airport</u>, one of the world's largest airports, spanning 700,000 square meters and expected to support 45 million passengers annually by 2021, to test and assure security, reliability and high-availability of information systems deployed across the airport premises.

Spirent's professional services team executed on an extensive four-month plan through the summer of 2019 as the airport prepared to welcome its first passengers. This work included field testing the airport's networks and data center, traveler Wi-Fi, network security and the other key supporting systems.

HOW SPIRENT CAN HELP

Spirent services and solutions enable you to Design, Develop, and Deploy next generation networks and applications with proven expertise and practical guidance ensuring success.
