Move forward with confidence

Spirent Professional Services can accelerate and de-risk the testing regimen of the core positioning, navigation and timing (PNT) capabilities driving innovation in the consumer electronics industry:

**Smartphones:** Integrating multi-constellation – and, increasingly, multi-frequency – GNSS receivers to deliver new capabilities, working in very short development cycles

**Wearables:** Developing new devices and services that leverage the potential of high-performance PNT under very tight packaging and energy consumption boundary conditions

**Location-based services:** Using PNT data from handheld and wearable devices to develop new applications for fitness tracking, asset monitoring, payment authorisation and more

With Spirent’s industry-leading PNT and test expertise readily available through a portfolio of Professional Services, you can assure the functionality of your PNT solutions and bring new products to market faster and with lower risk.
Lab as a Service
Assure your solutions in a world-class PNT test lab

Spirent will test your PNT solutions in our fully equipped UK lab, using high-end simulators, interference generators, RF Record & Playback systems, and Spirent software for scenario definition, test execution and test results reporting.

Lab as a Service is a simple, 3-step process:

1. We define the testing scope jointly with you
2. You ship your device(s) to our lab and we execute the agreed tests
3. We deliver the results to you in a full test report

If required, we can also set up a temporary test facility at your premises using our own equipment.

LAB TESTING COMPETENCIES

1  Standards Conformance Testing
   Test conformance and performance against key standards such as RED, ETSI or 3GPP.

2  Benchmarking
   Compare your own or a supplier’s solution against the rest of the industry to improve your performance.

3  Parametric Testing
   Lab testing to understand your PNT performance from a range of observable.

4  Functional Testing
   Ensure expected system-level operation and functionality across relevant conditions.

USE CASE:
RED COMPLIANCE TESTING

A start-up was developing a new IoT device aimed at the fitness market, which uses GNSS for tracking

It needed to quickly prove GNSS compliance with the Radio Equipment Directive (RED). Spirent set up the required test environment in its UK lab, defined the test cases and executed the RED (ETSI 303 413) testing for GPS L1CA, including both out-of-band response and spurious emissions.

Based on this, the customer was able to achieve GNSS RED compliance.
Installation and Onboarding

Get up and running fast with your Spirent equipment

Get your new Spirent investments up and running fast with our expert installation and onboarding service.

Spirent engineers will work at your premises to set up and configure your equipment, and provide customised integration with your existing third-party software and hardware.

Combine with a Spirent training programme to leverage the full value of your Spirent investment from day one.

Training

Accelerate your learning curve

Maximise the return on your Spirent investment with standard or tailored training courses for your test team. Spirent experts will deliver a course at your premises, at our UK premises in Paignton, Devon, or via videoconference.

A typical course is delivered over two days and includes:

- One day of training in the use of your Spirent hardware and software
- One day of tailored training geared to the specific objectives of your test programme

You’ll quickly gain inhouse expertise to unlock the full value of your Spirent equipment.

Scenario Provisioning

Test faster and more reliably with Spirent-built scenarios

Choose existing test scenarios from Spirent’s extensive database built up over years of PNT testing, or have Spirent build custom scenarios according to your test requirements.

This service is tailored to your needs and budget, with options including:

- Scenarios for any Spirent GNSS simulator
- Scenarios generated on a Spirent simulator and recorded with an RF Record & Playback system
- Real-world recordings captured in a location of your choice on an RF Record & Playback system

Available scenarios in our database include test packs for standards conformance, RF interference and spoofing, RTK, RAIM and multi-constellation interoperability.

Test as a Service

Accelerate and de-risk your GNSS testing

One or more Spirent test engineers will work onsite with your lab team to set up, manage and conduct the PNT testing element of your overall test programme.

Our end-to-end service can include:

- Test strategy
- Scenario definition and creation
- Test execution
- Test environment management
- Analytics and reporting

Engagements are tailored to your requirements: short-term to fulfil a specific need, or longer-term to manage and oversee a complete PNT test programme.

USE CASE: SHORT-TERM RESOURCING

An international supplier developing a new GNSS chipset for a leading smartphone OEM identified a short-term resource gap in the test team.

The company asked Spirent to provide expert resources for four weeks. Spirent deployed two experienced PNT test engineers, who integrated seamlessly with the team and support scenario creation, test execution, test reporting and analytics.

As a result, the programme was completed as scheduled with no delays.
Tailored Services

Test expertise tailored to your needs

If you have a PNT test requirement that isn’t covered in any of the services outlined in this brochure, Spirent can still provide a solution. Contact us to discuss your needs and to see how our experienced PNT test engineers and consultants can help.

Next Steps

1. **DISCOVER**
   Our Professional Services experts will reach out to you and discuss your challenge and requirements.

2. **DEFINE**
   Based on your requirements, we will define a SoW as required including timing, deliverables and budgetary quotation.

3. **DELIVER**
   Here’s where the project really gets started. We will execute against the defined SoW and provide the desired deliverables.

4. **DEBRIEF**
   We will jointly go over all deliverables to assure that all expectations are met and no question goes unanswered.

Positioning you for success

Spirent has spent over 30 years at the forefront of PNT, working with government, military, space, industry, and leading device and chipset manufacturers to evaluate and test PNT solution performance.

Our test engineers and consultants have many years of professional test experience, combined with in-depth knowledge of PNT testing hardware and software. We can help you get started faster and make full use of Spirent’s expertise to assure every aspect of your product’s PNT capabilities.

Contact us to discuss your PNT test programme today.
