Selfie Ready? A New Generation for Cosmetic Dentistry: Selfie Culture and SnapChat Dysmorphia Driving Record Numbers to Cosmetic Dentistry

Appearance and self-esteem have long been intertwined. So as our social media and selfie culture continues to grow, it's no surprise that more and more people are seeking out cosmetic dentistry, actually in record numbers, as a way to enhance their appearance. Young adults and adolescents are particularly susceptible. We need to respond with conservative ways to satisfy our patient's desires for ideal smiles. This course will look at cosmetic dental issues that are of particular concern to our teenage and young adult patients: tooth color and staining issues, post orthodontic refinement of smiles, spacing and crowding, misshapen teeth, and soft tissue considerations. Conservative options and step-by-step treatment will be discussed for direct composite bonding, direct composite veneers, and minimal prep indirect veneers. Boost their confidence and boost your bottom line.

Objectives:

- Help the dentist gain an awareness of conservative treatment options for teenage and young adult patients who desire enhancement to their smiles
- Discuss how utilizing global smile design principles can enhance treatment options and offer better outcomes
- Learn how the dentist and team can dialogue with these patients and their parents
- Step-by-step directions for completing conservative cosmetic treatments: direct bonding, direct composite veneers, and minimal prep indirect veneers

DR. SUSAN MCMAHON

Dr. Susan McMahon has enjoyed a successful career for over 25 years in the dental industry. Susan is an accomplished cosmetic dentist, national Key Opinion Leader in the dental industry, educator, and author.

New Materials in Indirect Restorative Dentistry

This fast-paced, informative session will introduce the participants to several new materials in the arena of indirect restorative dentistry. Tips and techniques for these materials will be discussed during this presentation. Pros and cons of each material will be discussed. This course will cover the latest development in all porcelains, cements, impression materials, and laser technology and elucidate their influences on the modern practice of dentistry.

During this program practitioners will:

- Gain knowledge of modern ceramic materials and understand limitations and strengths of each type of material
- Develop a better understanding of the indications and contraindications of each material
- Improve their understanding of the plethora of modern cements and which clinical situations are indicated for their use
- Navigate the technological advances in laser dentistry and learn how to incorporate lasers into general practice
- Learn predictable techniques designed to capture flawless impressions the first time they are attempted

DR. FOROUD HAKIM

Dr. Foroud Hakim has balanced private practice and dental education for over 30 years. He has a true passion for restorative dentistry ranging from complex rehabilitation to optimal and conservative single tooth restoration. He is an Associate Professor in the Department of Restorative Dentistry at University of the Pacific and served as course director for "Occlusion, TMJ & Advanced Restorative Concepts."
