For a final esthetic finish, try the unique Jiffy Goat Hair Brush and Ultradent Diamond Polish Mint.

UNIVERSAL. ESSENTIAL. EFFICIENT.

Ultradent's Jiffy Universal Ceramic Polishing System is a finishing solution in which all adjusters and polishers work interchangeably on porcelain, lithium disilicate, and zirconia. Each convenient kit includes everything you need, eliminating the need to purchase unnecessary or multiple components and allowing you to create a truly smooth, beautiful, high-gloss finish of the highest quality on all your ceramic restorations.

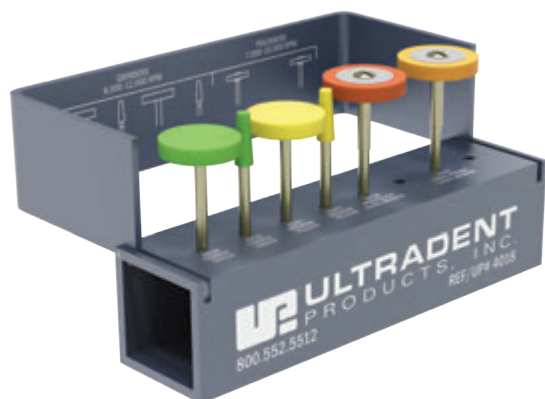

DON'T SHORTCUT YOUR FINISH

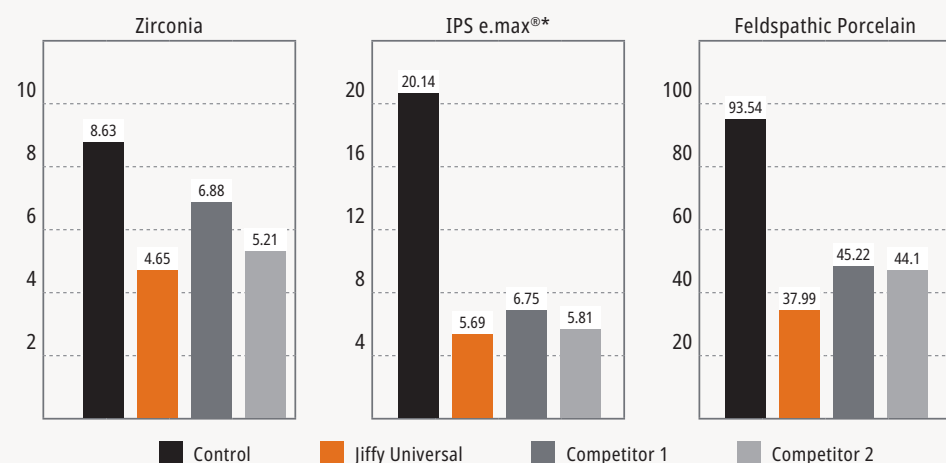

As a dentist, you spend time and effort crafting quality, natural-looking restorations. But if an incorrect or inferior finishing adjuster or polisher is used, the integrity of your restoration can be compromised.

Because of the extreme hardness of newer ceramic materials, effectively adjusting and polishing ceramic restorations can be a major challenge. If a restoration is not adjusted and polished correctly, it can result in microfractures and abrasion of the softer natural dentition of adjacent teeth.

Jiffy Universal Ceramic Kits offer you a universal solution with an optimal number of components, so you can efficiently adjust and polish any ceramic material to achieve a truly smooth surface—with the highest quality, most natural-looking finish possible.

Surface Roughness (uin)¹

What Doctors Are Saying

“These are by far the **quickest** and **best** polishing kits I have ever used. The polish on zirconia is incredible. I have never seen a better, more glass-like appearance on zirconia than I have with the Jiffy Universal System.”

—Dr. Eric Hollander DDS, Austin, TX

“These polishing kits give a very nice sheen and are better than any others I’ve used.”

—Dr. William J. Dunbar DDS, Glencoe, MN

FEATURES & BENEFITS

- Universal application eliminates the need for multiple adjusters and polishers, saving you time and money
- Specially formulated Ultradent diamond grit provides optimal smoothness and outstanding polishing results, while still being gentle on processed materials
- Multi-grit diamond particles allow for effective adjustment of ceramics for a truly smooth and high-gloss finish
- Maximum diamond retention ensures a long service life
- Autoclavable aluminum block extends the life of the system

Jiffy natural

NATURAL. UNIVERSAL. BEAUTIFUL.

The Jiffy Natural Universal Ceramic Polishing system consists of malleable spiral-shaped wheels that are designed to easily conform to tooth anatomy. Their pliable finger-like extensions easily reach where cups and points can't, and soften super high-gloss finishes for a natural enamel-like result.

They are designed to be used in conjunction with the Jiffy™ Universal Ceramic Adjusting and Polishing System to easily achieve a natural, high-quality finish on all ceramic restorations. The diamond-impregnated wheels are available in extraoral and intraoral wheels in both medium and fine grits. The efficient two-step process allows you to easily achieve the most natural finish on any ceramic material including zirconia, lithium disilicate, and porcelain.
