Opalescence™ Endo Whitening

- 35% hydrogen peroxide
- Specifically formulated to whiten endodontically treated, discolored, non-vital teeth
- Designed for the “walking bleach” technique
- Convenient, premixed syringe delivery
Opalescence™ Endo Whitening

Non-Vital “Walking Bleach”

1. Completely remove all the restorative and root sealing material from the coronal pulp chamber and 2–3 mm below healthy gingiva. Place a 2 mm thick conventional glass ionomer or a resin modified glass ionomer to seal the endodontically treated canal. Verify set of material before proceeding.

2. Apply a layer of Opalescence Endo whitening gel to the chamber.

3. Insert a cotton pellet into the chamber.

4. Place mixed UltraTemp™ Regular filling material directly to site.

5. Wipe away excess with a wet cotton ball or gauze before it sets.

Finished. Repeat every 1–5 days until desired results are achieved.

MUST BE REFRIGERATED

1270 - Opalescence Endo Syringe Kit
2 x 1.2 ml Opalescence Endo syringes
20 x Black Mini tips

MUST BE REFRIGERATED

1323 - Opalescence Endo Syringe 2pk
1.2 ml syringes
