THE ORIGINAL KNITTED CORD

Easy packing. Excellent absorption. Exceptional retraction.
Ultrapak E cord is impregnated with racemic epinephrine hydrochloride. Ultrapak E cord is not recommended to be used with iron sulfate hemostatics (Astringedent™, Astringedent™ X, and ViscoStat™ hemostatics) since a temporary blue/black color could result.

When tissue management is key, reach for Ultrapak knitted displacement cord. Its proprietary knitted design is better than braided or twisted cord for packing into the sulcus, absorbing fluids, and expanding for adequate retraction. As an important part of Ultradent’s proven tissue management system, Ultrapak cord displaces tissue with predictability and minimum effort.

Knitted Ultrapak cord is composed of thousands of tiny, interlocking loops so it compresses and expands easier than other cords. 100% cotton fibers provide high absorption of hemostatic agents and sulcular fluids. Use cords that appear slightly larger than you are used to with braided cords.

Ultrapak cord packs effortlessly into the sulcus and then exerts a gentle, continuous outward force as knitted loops seek to open for optimal tissue displacement.

Ultrapak CleanCut design features a blade in the cap for efficient cutting. A special dispensing orifice prevents cord from falling into the bottle.
